Balance of Payments Statistics Yearbook (BOPSY): Contains two sections; World and Regional Tables, and Country Tables. The first section presents 21 world and regional tables for major components of the balance of payments, net International Investment Position (IIP), and total financial assets and total liabilities for the IIP. The second section provides detailed tables on balance of payments statistics for 189 economies and IIP data for 143 economies.

INTERNATIONAL MONETARY FUND

Balance of Payments Statistics

Yearbook 2014

Selection of Statistical Publications

International Financial Statistics (IFS)

Acknowledged as a standard source of statistics on all aspects of international and domestic finance, IFS publishes, for most countries of the world, current data on exchange rates, international liquidity, international banking, money and banking, interest rates, prices, production, international transactions (including balance of payments and international investment position), government finance, and national accounts. Information is presented in tables for specific countries and in tables for area and world aggregates. IFS is published monthly and annually. Price: Subscription price is US\$847 a year (US\$550 to university faculty and students) for twelve monthly issues and the yearbook. Single copy price is US\$109 for a monthly issue and US\$172 for a yearbook issue.

Balance of Payments Statistics Yearbook (BOPSY)

Balance of Payments Statistics Yearbook (BOPSY): Contains two sections; World and Regional Tables, and Country Tables. The first section presents 21 world and regional tables for major components of the balance of payments, net International Investment Position (IIP), and total financial assets and total liabilities for the IIP. The second section provides detailed tables on balance of payments statistics for 189 economies and IIP data for 143 economies. Price: US\$153.

Direction of Trade Statistics (DOTS)

Quarterly issues of this publication provide, for 160 countries, tables with current data (or estimates) on the value of imports from and exports to their most important trading partners. In addition, similar summary tables for the world, industrial countries, and developing countries are included. The yearbook provides, for the most recent seven years, detailed trade data by country for approximately 184 countries, the world, and major areas. Price: Subscription price is US\$247 a year (US\$212 to university faculty and students) for the quarterly issues and the yearbook. Price for a quarterly issue only is US\$41 and the yearbook only is US\$110.

Government Finance Statistics Yearbook (GFSY)

This annual publication provides detailed data on transactions in revenue, expense, net acquisition of assets and liabilities, other economic flows, and balances of assets and liabilities of general government and its subsectors. The data are compiled according to the framework of the 2001 Government Finance Statistics Manual, which provides for several summary measures of government fiscal performance. Price: US\$102.

CD-ROM Subscriptions

International Financial Statistics (IFS), Balance of Payments Statistics (BOPS), Direction of Trade Statistics (DOTS), and Government Finance Statistics (GFS) are available on CD-ROM by annual subscription. The CD-ROMs incorporate a Windows-based browser facility, as well as a flat file of the database in scientific notation. Price of each subscription: US\$725 a year for single-user PC license (US\$125 for university faculty and students). Network and redistribution licenses are negotiated on a case-by-case basis. Please visit www.imfbookstore.org/onlineServicePricing.asp for information.

Subscription Packages

Combined Subscription Package

The combined subscription package includes all issues of IFS, DOTS, GFS, and BOPSY. Combined subscription price: US\$1,349 a year (US\$1,017 for university faculty and students). Expedited delivery available at additional cost; please inquire.

Combined Statistical Yearbook Subscription

This subscription comprises BOPSY, IFSY, GFSY, and DOTSY at a combined rate of US\$537. Because of different publication dates of the four yearbooks, it may take up to one year to service an order. Expedited delivery available at additional cost; please inquire.

IFS, BOPS, DOTS, GFS on the Internet

The Statistics Department of the Fund is pleased to make available to subscribers the International Financial Statistics (IFS), Balance of Payments Statistics (BOPS), Direction of Trade Statistics (DOTS), and Government Finance Statistics (GFS) databases through the new, easy-to-use IMF eLibrary Data online service. New features include Data Reports, which provides quick access to predefined tables and charts aimed at satisfying many common data searches. From your data report, you can download to Excel, PDF, and Word. IMF eLibrary Data lets you create a basic custom-built data query in well under a minute, using the Query Builder tool and it offers greater flexibility to create larger and more complex queries. Once you have defined your query, you can structure the table the way you want it, and then convert your data into a chart or download it. A number of personalization options are available in the "My Data" section such as accessing your favorites and saved queries. Free registration for My Data can be obtained by clicking on the Sign In or Register link on the IMF eLibrary Data home page. Single user license price for each of the IFS, BOP, DOTS, GFS Online Service is \$725, and \$125 for academic users. Dependent on certain criteria, a range of scaled discounts is available. For full details of qualification for these discounts and online payment, please visit <http://www.imfbookstore.org/statistical.asp> or e-mail us directly at publications@imf.org.

- Annex V. Conceptual Framework of the Balance of Payments and International Investment Position
- Annex VI. Classification and Standard Components of the Balance of Payments and International Investment Position

1. Overview

Volume 65 of the *Balance of Payments Statistics Yearbook* (BOPSY), published by the International Monetary Fund (IMF), contains balance of payments and international investment position (IIP) data in accordance with the sixth edition of the *Balance of Payments and International Investment Position Manual (BPM6)*¹. Data are presented for 2005 forward. The IMF is grateful for countries' cooperation in providing comprehensive, timely, and regular data to the Fund for re-dissemination. These data support the IMF's Statistics Department (STA) in its efforts to respond to the analytical and policy needs of the IMF, member countries, and the international community.

The Yearbook contains two sections, **World and Regional Tables**, which presents 21 World and Regional Tables for major components of the balance of payments and IIP accounts, and **Country Tables**, which presents annual balance of payments and IIP data of individual countries, jurisdictions, and other reporting entities. Balance of Payments and IIP metadata (previously included as *Methodologies, Compilation Practices, and Data Sources*) is published only

¹ BPM6 was published in 2009. See: <http://www.imf.org/external/pubs/ft/bop/2007/bopman6.htm>.

in electronic format and is available through eLibrary-Data² and CD-ROM. The Yearbook is supplemented by the on-line database and CD-ROM, which are updated monthly.

As noted, the release of the Yearbook on the basis of BPM6³ was endorsed by the IMF's Committee on Balance of Payments Statistics. The BPM6 provides updated international standards covering the methodologies for compiling, and the presentation of, balance of payments and international investment position statistics. It incorporates clarifications and improvements reflecting significant developments and expansion in globalized international trade arrangements and financial markets that had been identified since the release of the fifth edition of the *Balance of Payments Manual (BPM5)* in 1993. Moreover, the linkages to and consistency with other macroeconomic statistics are maintained and enhanced through the parallel update of the *OECD Benchmark Definition of Foreign Direct Investment and the System of National Accounts*.

Appendix 8 of the BPM6 and the BPM6 Conversion Matrix (Appendix 1 of the BPM6 Compilation Guide) describe the conceptual and presentational changes from BPM5 in detail, including the change of names of accounts (e.g., current transfers in BPM5 is renamed secondary income in BPM6), the arrangement of data in the accounts (e.g., direct investment data are presented on a directional principle basis under BPM5, whereas they are presented on a strict asset/liability basis in the standard components of BPM6), and the values shown for accounts (e.g., goods that were temporarily sent abroad for processing without any ownership change were included in gross imports and exports under BPM5, whereas only the processing fee is included under BPM6).

For many decades, the IMF has published data on a basis that is consistent across countries and across time periods. Such data consistency is required to perform cross-country data comparisons, track growth rates across-time, and produce regional or global data aggregates. The

² See: <http://elibrary-data.imf.org/>

³ Volume 1 of the Yearbook, published in 1949, was based on the first edition of the Fund's *Balance of Payments Manual*, issued in 1948; Volumes 2-12 were compiled pursuant to the second edition of the *Manual*, issued in 1950; Volumes 13-23 were based on the third edition of the *Manual*, issued in 1961; and Volumes 24-29 were associated with that edition as well as the *Balance of Payments Manual: Supplement to Third Edition*, issued in 1973. Volumes 30-45 followed the guidance of the fourth edition of the *Manual*, published in 1977. Volumes 46-62 were presented in accordance with the standard components of the fifth edition of the *Balance of Payments Manual (BPM5)*. However, the standard components changed with the publication of *Financial Derivatives, a Supplement to the Fifth Edition (1993)* of the *Balance of Payments Manual*, published in 2000 and amended in 2002. As noted, Volume 63 and subsequent volumes were presented on the basis of BPM6.

challenge is that, as with the adoption of earlier versions of the IMF's *Balance of Payments Manual*, countries are adopting *BPM6* at different times. Data conversion work undertaken by Fund staff, in close consultation with IMF member countries, has made possible the presentation in the *BPM6* format of data starting with 2005 for economies that have not yet implemented *BPM6*. To assist users in understanding the impact of conversion to *BPM6*, as well as in understanding major methodological changes from *BPM5* to *BPM6*, a set of frequently asked questions is posted on the IMF webpage at <http://www.imf.org/external/pubs/ft/bop/2007/bopman6.htm>.

The methodologies, compiling practices, and data sources of reporting countries available through eLibrary-Data and CD-ROM are based on information provided to the Fund by countries. The descriptions are intended to enhance user understanding of the coverage, as well as the limitations, of individual country data. At the same time, they are useful in informing compilers of data sources and practices used by their counterparts in other countries. To facilitate countries' submission of metadata on balance of payments and IIP statistics, as applicable, countries are able to submit this information via online questionnaires.

Box 1. Selected Main Rules Used for the Generic Conversion of *BPM5* Data to *BPM6*

- The balances on the Current account, Capital account and Financial account, Reserve assets, and Net errors and omissions were not changed.
- "Merchanting" was reclassified from Services to Goods.
- "Manufacturing services on physical inputs owned by others" ("Goods for processing" in *BPM5*) was reclassified from Goods to Services. The gross values of goods that physically moved across borders for processing but for which there was no change in ownership are excluded from goods trade.
- "Repairs on goods" was reclassified from goods to services (called "Maintenance and repair services n.i.e." in *BPM6*).
- "Goods procured in ports by carriers" was included in "General merchandise on a balance of payments basis."
- "Communication services" and "Computer and information services" from *BPM5* were reclassified to "Telecommunications, computer, and information services" in *BPM6*.
- "Postal and courier services" was included in "Transport."
- "Migrants transfers" was included in "Other capital transfers – financial corporation, nonfinancial corporations, households, and NPISHs". (Although migrants transfers should not be included in the balance of payments accounts under *BPM6*, the elimination of this account was not possible without impacting net errors and omissions, which was avoided).
- "Reverse investment" in "Direct investment" was reclassified according to the asset/liability presentational basis.
- In general, the data for "Monetary authorities" in *BPM5* were mapped to "Central bank." In some instances, the data were mapped (in full or in part) to "General government" or other institutional units in consultation with countries.
- The use of signs in the balance of payments presentations was changed as follows: (i) in current and capital accounts, both credits and debits, were registered with positive signs; (ii) in financial account, increases in assets and increases in liabilities were registered with positive signs, and decreases in assets and decreases in liabilities with negative signs.
- For the IMF dissemination of data, consistent with long-time IMF practices, data provided by the Finance Department of the IMF on SDR holdings, SDR allocations, and Reserve position in the IMF were substituted for reported data, if different.

2. World and Regional Tables

This section presents aggregated country data. Balance of payments data are shown for major balance of payments components, and IIP data are shown for (i) the Net IIP and (ii) Total Assets and Total Liabilities. Data for countries, country groups, and the world are provided. Changes in the naming and composition of some groupings for regional aggregates are introduced in this Volume largely corresponding to the regional group-

ings in the April 2014 issue of the Fund's *World Economic Outlook (WEO)*. BOPSY has a wider coverage of economies than WEO because some economies not included in the WEO dataset report external sector data to STA. In addition to data reported by countries as shown in the Country Tables of the Yearbook (see next section), balance of payments data are provided for international organizations in this section of the Yearbook. The World and Regional tables include, in addition to reported data, data derived in a few instances indirectly from published sources.

In the World and Regional Tables, missing data have been estimated for countries by Fund staff to the extent possible. For the balance of payments, the estimation procedure is based largely on the use of the WEO database. Data published in BOPSY may differ from balance of payments data published in the WEO mainly due to timing and coverage differences (for example, as noted above, this section includes data on international organizations).

For the IIP, the estimates for nonreporting economies are derived from the IMF Research Department's External Wealth of Nations (EWN) database that includes data for over 200 economies. Data from EWN are in the public domain and are used extensively by IMF staff for multilateral surveillance and for research. They are updated and validated on a continuing basis.

External assets and liabilities in EWN are estimated from a variety of sources. Typically, official IIP data are used for countries that report such estimates. For countries and years for which IIP data are not reported, the data are estimated using alternative sources. These include, for example: (i) Bank for International Settlements (BIS) reported data and partner-country BIS data (for foreign assets), (ii) International Financial Statistics (IFS) data on deposit-taking corporations' and other financial corporations' foreign assets, (iii) IFS data for official reserves, (iv) Joint External Debt Hub, the World Bank's Global Development Finance, and the WEO databases for external debt liabilities, (v) cumulative financial flows (adjusted for valuation changes) are taken from STA published data as well as WEO (when STA data are not available), (vi) United Nations Conference on Trade and Development (UNCTAD) data on foreign direct investment (FDI), (vii) Coordinated Portfolio Investment Survey data for portfolio investment, and (viii) partner-country data from national sources for both FDI and portfolio equity assets and liabilities.

The following outlines the methodology used to gap-fill balance of payments data. With regard to goods and services transactions, where data gaps exist in years prior to or after the latest year of reporting to STA, estimates are made by applying the growth rates derived from the WEO for the missing year(s) to the latest reported annual data (debits and credits). In cases where there are gaps for the entire period, WEO data are inserted directly.

Net WEO data series are used to estimate primary income, secondary income, and the capital account. The estimation procedure for primary and secondary income carries forward the latest reported values for the balance of payments series, compares WEO and balance of payments net figures, and then adjusts balance of payments credit and debit figures so that both balance of payments and WEO net figures are the same. Where there are gaps in the data prior to the latest reported data, the net credit or the net debit figures from WEO are inserted directly. To estimate the capital account, the net WEO series is inserted directly, to credits if WEO shows a net credit and to debits if WEO shows a net debit. With regard to financial account transactions, when there are gaps, the WEO data are inserted to complete the series. There are no estimations for financial derivatives. Data on so-called Fund Accounts—for example, transactions in Special Drawing Rights (SDRs) or involving the Fund's General Resources Account—are obtained from Fund sources.

For the IIP, in some cases, neither reported data nor EWN data were available for one or more years in the time series. In these cases, estimates were derived by adding to the previous year stocks the current year's financial flows, as available. A small number of economies that have no data available from STA or the Research Department for the entire period are not included in the published tables. Estimates for missing data, which are included in regional and world totals, are not shown for the individual countries concerned.

"Country" as used in this publication does not always refer to a territorial entity that is a state as understood by international law and practice; the term also covers the Euro Area, the Eastern Caribbean Currency Union (ECCU), the Central African Economic and Monetary Community (CEMAC), the West African Economic and Monetary Union (WAEMU), and some non-sovereign territorial entities for which statistical data are provided internationally on a separate basis.

All tables of aggregates appearing in the World and Regional Tables section are shown in the table of contents of this publication. Table A-1 provides a summary of international transactions, showing world totals of the major components of the balance of payments. Tables A-2 through A-5 present balances by country for the current, capital, and financial accounts, as well as for errors and omissions. Tables B-1 through B-10 present major components of the balance of payments accounts. Each of these tables includes a breakdown by regional group, by country, and for international organizations.

Table C-1 presents "global discrepancies" in balance of payments statistics by major components. Global discrepancies shown in the table refer to the discrepancies between the sum of the debit and credit entries for the current and capital accounts, and between the sum of net acquisition of financial assets and net incurrence of liabilities for the financial account of corresponding components reported by countries and estimated by Fund staff. For example, the global discrepancy shown for the trade balance represents the difference between the global aggregate of trade surpluses for goods and that of trade deficits for goods. In principle, under balance of payments conventions, global aggregates for exports should equal global aggregates for imports, and global trade surpluses should mirror global trade deficits, with the global trade balance equal to zero. In general, the same principle applies to other balance of payments components shown in Table C-1.

For a variety of reasons, however, countries may not correctly record some transactions, or they classify corresponding transactions differently. Under these circumstances, errors and omissions in the national data and asymmetries (discrepancies) in the global statistics arise. Also, some coverage gaps exist at the global level, such as financial flows for some small offshore centers that do not report balance of payments data to the Fund. Figures presented in Table C-1 reflect such net global asymmetries for the different balances. The net errors and omissions shown in the table represent the sum of the global discrepancy figures for the current, capital, and financial accounts.

Within the current account, a negative global balance indicates a net excess of recorded debits, which may reflect an under-recording of credits, an overstatement of debits, or both. A positive global balance in the financial account

suggests an overstatement of financial account outflows (increases in financial assets and decreases in liabilities) or an understatement of recorded inflows (decreases in financial assets and increases in liabilities).

The memorandum items of Table C-1 show the global discrepancies of certain major components of the balance of payments as a proportion of the sum of credits and debits of the category.

Tables D-1, D-2, and D-3 present exports and imports of goods and services and the current account balance, as a percentage of gross domestic product (GDP), information that is of general interest to data users.

Table E-1 presents the Net IIP while E-2 shows Total Assets and Total Liabilities.

3. Country Tables

The country tables section presents the data pages alphabetically. "Country" in this publication does not always refer to a territorial entity that is a state as understood by international law and practice; the term also covers some non-sovereign territorial entities for which statistical data are provided internationally on a separate basis.

For each country, balance of payments data are presented in both analytic and standard presentations. Balance of payments components in the analytic presentation (Table 1) are arrayed to highlight the financing items (reserves and related items). The standard presentation of the balance of payments (Table 2) and of the IIP (Table 3) shows data displayed in the standard components described in the *BPM6*.

Tables 1, 2, and 3 present reported data for the years 2006–2013 for each country. Unless otherwise indicated, the tables present figures for calendar years.

Balance of Payments: Analytic Presentation

In the analytic presentation, shown in Table 1, balance of payments components are classified into five major data categories (groups A through E) that the Fund regards as useful for analyzing balance of payments developments uniformly; and transactions are reclassified from that shown in the standard components. The selected groups, however, should not be considered to reflect the Fund's recommendations about the analytic approach appropriate for every country. Other analytic presentations could be arrayed by regrouping the standard components in other ways to take into account the special circumstances of a specific country or to serve particular analytical requirements.

The figures shown in the analytic and standard presentations differ for balances of the current account, the capital account, and the financial account for some countries. This is because, in the analytic presentation, certain transactions under these accounts are reclassified as "reserves and related items." The reclassified transactions are grouped under reserve assets, credits and loans from the IMF, and exceptional financing. Exceptional financing refers to transactions undertaken by the authorities to finance balance of payments needs, including such items as external borrowing, accumulation and payment of arrears, and debt forgiveness. Exceptional financing excludes reserve assets, and credit and loans from the IMF. (See also Annex I.)

Balance of Payments: Standard Presentation

The standard components of balance of payments, shown in the standard presentation in Table 2, are summarized under goods and services, primary income, and secondary income in current account, and also under the main standard components in the capital account. Under the financial account, components are classified by functional category (i.e., direct investment; portfolio investment; financial derivatives (other than reserves) and employee stock options (ESOs); other investment; and reserve assets), by type of financial instrument (equity, debt, and other), separately for net acquisitions of financial assets and net incurrence of liabilities. Most of these financial account categories are further classified by domestic sector (central bank; deposit taking corporations, except the central bank; general government; and other sectors (with the latter containing "of which: other financial corporations"). (See also Annex II.)

International Investment Position

IIP data, as shown in Table 3, are arrayed in accordance with the standard components of the IIP as set forth in the *BPM6*. (See also Annex III.)

IIP data reflect a country's external financial assets and liabilities at a specific point in time. The classification of the IIP components is consistent with that of the financial account of the balance of payments. This consistency is necessary for a comprehensive analysis of relationships between them. The financial transactions of the balance of payments and other flows (revaluations and other changes in volume) show the contribution to changes between the opening and closing positions of the financial assets and liabilities recorded in the IIP. In other words, financial assets and liabilities gain or lose value and appear or disappear due to balance of payments transactions, other volume changes, and/or revaluation.

The net IIP is derived by taking the difference between the value of external financial assets and liabilities.

External debt is not a separate component of the IIP but can be derived by summing the liability positions other than financial derivatives (other than reserves) and ESOs, equity and investment fund shares, and other equity (these are not debt instruments according to international statistical standards).

Data Codes

Tables 1, 2, and 3 show codes for each data category and component. The codes are designed for the standard components of balance of payments and IIP data as defined in the *BPM6*.

There are nine digits/characters for each code shown in the Yearbook. The first two positions designate the account, with the first number indicating the main account, with "1" assigned to the Current Account, "2" to the Capital Account, "3" to the Financial Account, and "8" to the IIP. The second character indicates the sub account which the concept refers to, for example: "1A" Goods, "1B" Services, "1C" Primary Income, "1D" Secondary Income, "3A" Direct Investment, "8A" IIP: Direct Investment. The next four digits are used to classify balance of payments and IIP components. For exam-

ple, the current account is coded 10999, the capital account, 20999, and the financial account, 30999.

The sixth digit/character of the codes shown in the Yearbook denotes special features about specific data components. In this position “S” indicates substitution of Fund accounts and “F” indicates the exclusion of exceptional financing. The seventh digit indicates the accounting unit where “C” is credit, “D” is debit, “B” is balance, “A” is net acquisition of financial assets, “L” is net incurrence of liabilities and “N” is net. The eighth digit represents the economic sectors. The ninth digit represents maturity (on an original maturity basis) where “S” is short-term, “L” is long-term, “A” is all maturities, and “N” is not applicable. Readers may refer to Annex IV for details of the coding scheme.

Sign convention

In both the analytic and standard presentations (Tables 1 and 2), the transactions data are shown as gross credit or gross debit entries in the current and capital accounts, and as net acquisition of financial assets or net incurrence of liabilities (to reflect net changes in assets or net changes in liabilities) in the financial account. In the current and capital accounts, both credit and debit entries are positive (but without a plus sign). In the financial account, increases in assets and increases in liabilities are shown as positive amounts (without a plus sign) and decreases in assets and decreases in liabilities are shown as negative amounts. The current and capital account balances are obtained as credits minus debits, and the financial account balance is calculated as net acquisition of financial assets minus net incurrence of liabilities. A positive sign for the financial account balance indicates a net increase in financial assets, and/or a net decrease in liabilities, while a negative sign indicates a net increase in liabilities and/or a net decrease in financial assets.

Negative signs

The conversion rule for the reclassification of “Manufacturing services on physical inputs owned by others” (“Goods for processing” in *BPM5*) from goods to services may have generated negative values for these services for some economies in a given period. This is the case when the value of imports exceeds the value of exports in the processing economy, or when the value of exports exceeds the value of imports in the partner economy.

Nil, Unavailable Entries, or Confidential Data

In the Yearbook tables, dots (...) indicate that data are either not available, zero or insignificant, or confidential. In cases where data for one or more given subcomponent(s) cannot be revealed due to confidentiality reasons, the nondisclosed value(s) will be either (i) added to a generic subcomponent (such as “other”) within the relevant data component; or (ii) omitted without adjusting a generic subcomponent. In either instance, the reported total remains unchanged; therefore, in case (ii), it would be not equal to the sum of the components.

Rounding of Figures

Most data in the tables are expressed in units of one million. The unit is chosen to present the figures convey-

niently. Because of the calculation routines used, rounding differences may occur between an aggregate and the sum of its components.

Currency Conversion

The balance of payments and IIP data reported to the Fund are expressed in national currencies, in U.S. dollars, or in another currency. To facilitate comparisons among countries, all balance of payments and IIP statements published in the Yearbook and in the BOPS CD-ROM are expressed in U.S. dollars. In addition, all countries’ reported data on transactions and positions with the Fund and transactions and positions in SDRs are replaced with data obtained from the Fund records, which are kept in SDRs. This information is, in turn, converted to U.S. dollars.

For countries that do not report in U.S. dollars, balance of payments data are converted using the country conversion rates shown at the bottom of Table 1. These rates are normally the average exchange rates for a country for the relevant year taken from the *International Financial Statistics (IFS)*. For example, the IFS pages for the Euro Area contain line “rf,” giving average rates for euros per U.S. dollar. Conversions of transactions data from SDRs into U.S. dollars are made at the rates shown in line “sb” of the IFS pages for the United States. For countries reporting quarterly data in national currencies, annual U.S. dollar totals are obtained by aggregating the quarterly U.S. dollar figures.

For countries that do not report IIP data in U.S. dollars, data are converted using the country conversion rates shown at the bottom of Table 3. These rates are normally the end-of-period exchange rates for a country (line “ae”) for the relevant year taken from IFS. More information on the exchange rates used may be found in the introduction to IFS, Section 1, or on the IFS CD-ROM in the file entitled INT.rtf.

4. CD-ROM and Internet Versions

Statistics published in the Yearbook are also available on CD-ROM and through IMF eLibrary Data online service. In this electronic version, time series may be slightly larger than that appearing in the printed version of the Yearbook, as also may be the number of periods for which data observations of time series are given. Also, quarterly data reported by countries are available, and updates and revisions of the data are included as they become available. Inquiries about the CD-ROM and eLibrary Data should be addressed to:

Annex IV. IMF Coding System for Balance of Payments and International Investment Position

The coding structure consists of the following five segments with a fixed length.

<aggregate> two-digits: The first digit identifies the account that the series falls under (e.g., current account, capital account, financial account or international investment position). The second digit identifies the section that the series falls under within the account.

<BOP item> 4 digits: This identifies all the standard components, and selected supplementary information components.

<position> one-digit: This identifies the accounting unit associated with the measurement of value for the concept.

<resident sector> one-digit: This identifies the domestic sector associated with the concept.

<maturity> one-digit: This identifies the length of maturity for the concept where applicable.

The code requires all five segments and takes the form <aggregate><BOP item><position><resident sector><maturity>.

Code	Aggregate in balance of payments and international investment position (IIP)
10	Current Account
1Z	Goods and Services
1A	Goods
1B	Services
1C	Primary income
1D	Secondary income
20	Capital Account
30	Financial Account
3A	Direct Investment
3B	Portfolio Investment
3C	Financial Derivatives (other than reserves) and Employee Stock Options
3D	Other Investment
3E	Reserve Assets
4Y	Current, Capital and Financial Balance Item
40	Net Errors and Omissions
4Z	Reserve and Related Items
80	Assets/Liabilities (IIP)
8A	Direct Investment ((IIP)
8B	Portfolio Investment (IIP)
8C	Financial Derivatives (other than reserves) and Employee Stock Options (IIP)
8D	Other Investment (IIP)
8E	Reserve Assets (IIP)

Annex IV. IMF Coding System for Balance of Payments and International Investment Position

Examples of the codes for “Other Investment” of the financial account are shown below.

Other investment	3D9999NAA

Annex V. Conceptual Framework of the Balance of Payments and International Investment Position

This annex is reproduced and summarized from the BPM6. Paragraphs and chapters cited in this Annex refer to those that appear in the BPM6; to clarify this point, the abbreviation “BPM6” is added to the quoted text before each reference to a specific BPM6 paragraph or chapter. An [...] indicates that only part of the paragraph is quoted here.

Overall framework

2.2 The international accounts for an economy summarize the economic relationships between residents of that economy and nonresidents. They comprise the following:

- (a) the international investment position (IIP)—a statement that shows at a point in time the value of financial assets of residents of an economy that are claims on nonresidents or are gold bullion held as reserve assets; and the liabilities of residents of an economy to nonresident s;
- (b) the balance of payments—a statement that summarizes economic transactions between residents and nonresidents during a specific time period; and
- (c) the other changes in financial assets and liabilities accounts—a statement that shows other flows, such as valuation changes, that reconciles the balance of payments and IIP for a specific period, by showing changes due to economic events other than transactions between residents and nonresidents.

2.3 The international accounts provide an integrated framework for the analysis of an economy’s international economic relationships, including its international economic performance, exchange rate policy, reserves management, and external vulnerability. A detailed study of the use of international accounts data is provided in *BPM6*, Chapter 14, Selected Issues in Balance of Payments and International Investment Position Analysis.

International investment position

2.8 *The IIP is a statistical statement that shows at a point in time the value of financial assets of residents of an economy that are claims on nonresidents or are gold bullion held as reserve assets; and the liabilities of residents of an economy to nonresidents. The difference between the assets and liabilities is the net position in the IIP and represents either a net claim on or a net liability to the rest of the world.*

Balance of payments

2.12 *The balance of payments is a statistical statement that summarizes transactions between residents and nonresidents during a period. It consists of the goods and services account, the primary income account, the secondary income account, the capital account, and the financial account. Under the double-entry accounting system that underlies the balance of payments, each transaction is recorded as consisting of two entries*

and the sum of the credit entries and the sum of the debit entries is the same. [...]

2.13 The different accounts within the balance of payments are distinguished according to the nature of the economic resources provided and received.

Flows and Positions

3.2 *Flows refer to economic actions and effects of events within an accounting period, and positions refer to a level of assets or liabilities at a point in time. International flows are recorded in the accounts as transactions (balance of payments) and other changes in financial assets and liabilities account. Flows and positions are integrated so that all changes in positions between two points in time are fully explained by the recorded flows. Positions and flows of financial assets and liabilities are grouped according to the functional and instrument classifications of financial assets and liabilities. Nonfinancial transactions are generally grouped according to their nature and characteristics. Positions of external financial assets and liabilities are shown in the international investment position.[...]*

Flows

3.3 *Flows reflect the creation, transformation, exchange, transfer, or extinction of economic value; they involve changes in the volume, composition, or value of an institutional unit's assets and liabilities. This classification is the basis for the flow accounts, as discussed in BPM6, Chapters 8–13. Flows also can be classified into (a) those that are associated with transactions and (b) other flows.*

a. Transactions

3.4 *A transaction is an interaction between two institutional units that occurs by mutual agreement or through the operation of the law and involves an exchange of value or a transfer. Transactions are classified according to the nature of the economic value provided—namely, goods or services, primary income, secondary income, capital transfers, non-produced nonfinancial assets, financial assets, or liabilities. Chapters 8 and 10–13 deal with transactions. Mutual agreement means that there is prior knowledge and consent by the institutional units. Transactions imposed by force of law are applicable mainly to certain distributive transactions, such as the payment of taxes, fines, and penalties. Although taxes or penalties are imposed on individual institutional units by administrative or judicial decisions, there is collective recognition and acceptance by the community of the obligation to pay taxes and penalties. Because of the exchange of value, a transaction consists of two economic flows, one in each direction—for example, goods supplied by one party in return for currency supplied by the other. The definition is extended to cover actions within an institutional unit that are analytically useful*

Annex V. Conceptual Framework of the Balance of Payments and International Investment Position

to treat as transactions, often because the unit is operating in two different capacities, such as where one part operates as a branch. The definition is also extended to cover unrequited transfers, by the identification of transfers as the corresponding flow to the economic value supplied. Transactions recorded in the international accounts are between two institutional units, one a resident of the compiling economy and the other a nonresident.

Types of transactions

3.12 Transactions take many different forms. Transactions can be classified according to whether they are exchanges or transfers (see *BPM6*, paragraph 3.13) and whether they are monetary or nonmonetary (see *BPM6*, paragraph 3.14). Furthermore, certain transactions are rearranged through rerouting and partitioning (see *BPM6*, paragraphs 3.16–3.17), whereas other transactions may be imputed to reflect the underlying economic relationship (see *BPM6*, paragraph 3.18). [...]

b. Other flows

3.19 *Other flows are changes in the volume, value, or classification of an asset or liability that do not result from a transaction between a resident and a nonresident.* Other flows are genuine economic phenomena and capture changes in assets and liabilities between opening and closing positions that are not due to transactions. In the context of international accounts, other flows are recorded only for financial assets and liabilities that represent claims on and liabilities to nonresidents and gold bullion (see *BPM6*, paragraph 3.24), because the international investment position relates only to external financial assets and liabilities.

3.20 Other flows cover various kinds of changes in assets and liabilities that are recognized analytically under two broad types:

(a) *Other changes in the volume of assets and liabilities reflect entrances of new assets into balance sheets and exits of existing assets and liabilities from balance sheets that are not caused by interactions by mutual agreement between institutional units (i.e., transactions).*

(b) *Revaluations (holding gains and losses) on an asset or liability arise from changes in their prices and/or the exchange rates.* In international accounts, revaluations are further classified into those that are due to exchange rate changes and those that are due to other price changes.

Positions

3.23 *Positions refer to the level of financial assets or liabilities at a point in time.* They are recorded in the international investment position. Generally, positions are shown at the beginning and end of an accounting period. Positions

between two periods are connected with flows during that period because changes in positions are caused by transactions and other flows.

3.24 Financial assets are economic assets that are financial instruments. Financial assets include financial claims and, by convention, monetary gold held in the form of gold bullion (including gold held in allocated gold accounts). A financial claim is a financial instrument that has a counterpart liability. Gold bullion is not a claim and does not have a corresponding liability. It is treated as a financial asset, however, because of its special role as a means of financial exchange in international payments by monetary authorities and as a reserve asset held by monetary authorities.

3.25 The international investment position covers financial assets and liabilities that have an international character. All financial claims involve two parties, so they have an international character if the claim is on a nonresident. Similarly, all liabilities involve two parties, so they have an international character if the obligation is to a nonresident. The international investment position is described in Chapter 7.

Accounting System

3.26 The accounting system underlying the international accounts derives from broad bookkeeping principles. To understand the accounting system for international accounts, three bookkeeping principles can be distinguished:

- (a) vertical double-entry bookkeeping (also known in business accounting as simply double-entry bookkeeping);
- (b) horizontal double-entry bookkeeping; and
- (c) quadruple-entry bookkeeping.

Vertical double-entry bookkeeping—corresponding entries

3.27 The main characteristic of vertical double-entry bookkeeping is that each transaction leads to at least two corresponding entries, traditionally referred to as a credit entry and a debit entry, in the books of the transactor. The international accounts for an economy are to be compiled on a vertical double-entry bookkeeping basis from the perspective of the residents of that economy. Because each transaction is either an exchange or a transfer, it requires two entries. This principle ensures that the total of all credit entries and that of all debit entries for all transactions are equal, thus permitting a check on consistency of accounts for a single unit. Reclassifications also lead to debit and credit entries. Other flows have their corresponding entries directly in changes in net worth. As a

Annex V. Conceptual Framework of the Balance of Payments and International Investment Position

result, vertical double-entry bookkeeping ensures the fundamental identity of a unit's balance sheet, that is, the total value of assets equals the total value of liabilities plus net worth. The total value of the assets owned by an entity minus the total value of liabilities provides net worth. In the international accounts, net IIP provides a measure of net financial claims with nonresidents plus gold bullion held as monetary gold. These terms are discussed in *BPM6*, paragraphs 7.1–7.2.

Horizontal double-entry bookkeeping—counterpart entries

3.28 The concept of horizontal double-entry bookkeeping is useful for compiling accounts that reflect the mutual economic relationships between different institutional units in a consistent way. It means that if unit A provides something to unit B, the accounts of both A and B show the transaction for the same amount: as a payment in A's account and as a receipt in B's account. Horizontal double-entry bookkeeping ensures the consistency of recording for each transaction category by counterparties. For example, at the worldwide level, dividends payable by all economies should be equal to dividends receivable by all economies.

Quadruple-entry bookkeeping

3.29 The simultaneous application of both the vertical and horizontal double-entry bookkeeping results in a quadruple-entry bookkeeping, which is the accounting system underlying the recording of transactions in the national accounts and international accounts. Additionally, definitions, classifications, and accounting principles in the international accounts are derived from the viewpoint of conceptual symmetry as well as symmetric reporting by partner economies. The quadruple-entry system deals in a coherent way with multiple transactors or groups of transactors, each of which practices vertical double-entry bookkeeping. A single transaction between two counterparties thus gives rise to four entries. In contrast to business bookkeeping, international accounts deal with interactions among a multitude of units in parallel and thus require special care from a consistency point of view. As a liability of one unit is mirrored in a financial asset of another unit, for instance, they should be identically valued, allocated in time, and classified to avoid inconsistencies in aggregating balance sheets of units into regional or global totals. The same is also true for all transactions and other flows that affect balance sheets of two counterparties. The quadruple approach to transactions in the international accounts is needed for bilateral comparisons and global integrated data.

Types of accounting entries

3.30 The international accounts use the following conventions and terminologies for recording flows. In the current and capital accounts, a credit denotes entries from

exports, primary income receivable, transfers receivable, and disposals of nonproduced nonfinancial assets. A debit is used to record entries for imports, primary income payable, transfers payable, and acquisitions of nonproduced nonfinancial assets.

3.31 In the case of transactions in financial assets and liabilities, the terms “net acquisition of financial assets” and “net incurrence of liabilities” are used. Financial account items are recorded on a net basis separately for each financial asset and liability (i.e., they reflect changes due to all credit and debit entries during an accounting period). The use of the terms “net acquisition of financial assets” and “net incurrence of liabilities” highlights the impact of the financial account on the international investment position. The use of these terms also simplifies the interpretation of data. A positive change indicates an increase in assets or liabilities and a negative change indicates a decrease in assets or liabilities. The interpretation of increase or decrease under the credit or debit notion, however, depends on whether the increase or decrease refers to assets or liabilities (a debit for an asset is an increase; a debit for a liability is a decrease). Although the debit and credit presentation is not emphasized for the financial account transactions, it is important to recognize and maintain the accounting identities. For example, a credit is always conceptually matched with a corresponding debit, the latter relating to either an increase in an asset or a reduction in a liability (see *BPM6*, Box 2.1). [...]

Principles for Time of Recording and Valuation

3.39 The *BPM6* recommends use of the accrual basis for determining the time of recording of flows. The accrual basis matches the time of recording with the timing of the events giving rise to the actual resource flows. With the cash basis, the time of recording would potentially diverge significantly from the time of the economic activities and transactions to which the cash flows relate. The due-for-payment basis would usually record transactions after the resource flows have taken place, although the long delays caused by the cash basis would, in most cases, be reduced. The timing of the commitment basis would precede the actual resource flows.

3.40 The accrual basis provides the most comprehensive information because all resource flows are recorded, including nonmonetary transactions, imputed transactions, and other flows. Such a comprehensive recording ensures the integration of flows and changes in balance sheets. The accrual basis is consistent with the way transactions, other flows, and main economic aggregates (balance on goods and services, net lending/net borrowing) are defined. It is also close to business accounting.

Time of recording

Annex V. Conceptual Framework of the Balance of Payments and International Investment Position

a. Time of recording of transactions

3.41 The change of economic ownership is central in determining the time of recording on an accrual basis for transactions in goods, nonproduced nonfinancial assets, and financial assets. The term “economic ownership” reflects the underlying reality economic accounts are attempting to measure. Economic ownership takes account of where the risks and rewards of ownership lie. The concepts of economic ownership and associated risks and rewards are further elaborated in *BPM6*, paragraph 5.3. A change in ownership from an economic point of view means that all risks, rewards, and rights and responsibilities of ownership in practice are transferred. In general, a change in “legal ownership” also involves a change in economic ownership. In some cases, a change of “economic ownership” takes place even though the “legal ownership” remains unchanged (e.g., financial leases and transactions between an enterprise and its foreign branches). In other cases, there is no change in economic ownership, even though there is a change in legal ownership. [...]

3.42 Entries for transactions in goods, nonproduced nonfinancial assets, and financial assets owned by institutional units are made at the time economic ownership of the underlying asset is transferred. When a change in economic ownership is not obvious, the change is considered to occur at (or is proxied by) the time the parties to the transaction record it in their books or accounts.

b. Time of recording of other flows

3.60 Other flows include other changes in the volume of assets and revaluations. Other changes in the volume of assets are usually discrete events that accrue at precise moments or within fairly short periods of time. Other changes in the volume of assets, including reclassifications, are recorded as these changes occur. Revaluations can occur continuously as prices and exchange rates change. In practice, revaluations are usually computed between two points in time at which the relevant assets and liabilities are valued.

Valuation

3.67 *Market prices refer to current exchange value, that is, the values at which goods and other assets, services, and labors are exchanged or else could be exchanged for cash.* Market prices are the basis for valuation in the international accounts. This section describes the general principles for valuation of flows and positions. Valuation of specific types of flows and positions are discussed in further detail in relevant chapters of *BPM6*.

a. Valuation of transactions

3.68 *Market prices for transactions are defined as amounts of money that willing buyers pay to acquire something from willing sellers; the exchanges are made between independent parties and on the basis of commercial considerations only—sometimes called “at arm’s length.”* Thus, according to this strict definition, a market price refers only to the price for one specific exchange under the stated conditions. A second exchange of an identical unit, even under circumstances that are the same, could result in a different market price. A market price defined in this way is to be clearly distinguished from a price quoted in the market, a world market price, a going price, a fair market price, or any price that is intended to express the generality of prices for a class of supposedly identical exchanges rather than a price actually applying to a specific exchange. Furthermore, a market price should not necessarily be construed as equivalent to a free market price—that is, a market transaction should not be interpreted as occurring exclusively in a purely competitive market situation. In fact, a market transaction could take place in a monopolistic, monopsonistic, or any other market structure. Indeed, the market may be so narrow that it consists of the sole transaction of its kind between independent parties.

b. Valuation of other flows

3.81 Other flows in the international accounts capture changes in the IIP of financial assets and liabilities that are not due to transactions. Holding gains and losses arise from changes in market values of positions of financial assets and liabilities. Holding gains and losses may accrue continuously. A holding gain occurs when an asset increases in value or a liability decreases in value; a holding loss occurs when an asset decreases in value or a liability increases in value. The value of holding gains and losses during an accounting period shows net holding gains or losses for assets and liabilities separately. In practice, the value of holding gains and losses are calculated for each asset and liability between two points in time: the beginning of the period (or when the asset or liability is acquired or incurred) and the end of the period (or when the asset or liability is sold or extinguished).

3.83 Other changes in the volume of financial assets and liabilities are recorded at the market-equivalent prices of similar instruments. When writing off financial instruments that are valued at nominal values, the value recorded in the other changes in financial assets and liabilities account should correspond to their nominal value prior to being written off. For all reclassifications of assets and liabilities, values of both the new and old instruments should be the same.

c. Valuation of positions of financial assets and liabilities

Annex V. Conceptual Framework of the Balance of Payments and International Investment Position

3.84 *Positions of financial assets and liabilities should, in general, be valued as if they were acquired in market transactions on the balance sheet reporting date.* Many financial assets are traded in markets on a regular basis and therefore can be valued by directly using the price quotations from these markets. If the financial markets are closed on the balance sheet date, the market prices that should be used in the valuation are those that prevailed on the closest preceding date when the markets were open. Debt securities have a current market value as well as a nominal value, and for some purposes, supplementary data on the nominal values of positions of debt securities may be useful (see *BPM6*, paragraph 3.88 for definition of nominal value).

3.85 Valuation according to the market-value equivalent is needed for valuing financial assets and liabilities that are not traded in financial markets or that are traded only infrequently. For these assets and liabilities, it will be necessary to estimate fair values that, in effect, approximate market prices. The present value of future cash flows also may be used as an approximation to market prices provided an appropriate discount rate can be used.

Economic Territory

4.3 In its broadest sense, an economic territory can be any geographic area or jurisdiction for which statistics are required. The connection of entities to a particular economic territory is determined from aspects such as physical presence and being subject to the jurisdiction of the government of the territory. These issues are discussed in the residence section of this chapter (see *BPM6*, paragraphs 4.113–4.144).

4.4 The most commonly used concept of economic territory is the area under the effective economic control of a single government. For the purposes of global statistics and reporting to the IMF, it is important to have data on all areas under control of a particular government, including special zones, even if for some of the government's own statistical purposes, those zones are excluded or shown separately. Another kind of economic territory is a currency or economic union, which is dealt with in *BPM6*, Appendix 3. Other types of economic territory include a part of an economy, regions, or the world as a whole. Economic territories reflect any possible scope for macroeconomic policy or analysis.

4.5 The economic territory includes:

- (a) the land area;
- (b) airspace;
- (c) territorial waters, including areas over which jurisdiction is exercised over fishing rights and rights to fuels or minerals;

(d) in a maritime territory, islands that belong to the territory; and

(e) territorial enclaves in the rest of the world. These are clearly demarcated land areas (such as embassies, consulates, military bases, scientific stations, information or immigration offices, aid agencies, central bank representative offices with diplomatic status) that are physically located in other territories and used by governments that own or rent them for diplomatic, military, scientific, or other purposes with the formal agreement of governments of the territories where the land areas are physically located. These areas may be shared with other organizations, but the operations must have a high degree of exemption from local laws to be treated as an enclave. However, government operations that are fully subject to the laws of the host economy are not treated as enclaves, but as residents of the host economy.

4.6 Economic territory has the dimensions of legal jurisdiction as well as physical location, so that corporations created under the law are part of that economy. The concepts of economic territory and residence are designed to ensure that each institutional unit is a resident of a single economic territory. The use of an economic territory as the scope of economic statistics means that each member of a group of affiliated enterprises is part of the economy in which it is resident, rather than being attributed to the economy of its head office. The focus on data for an economic territory means that, in a few cases, a legal entity may be split for statistical purposes into separate units in different territories, as elaborated in *BPM6*, paragraphs 4.26–4.49.

Definition of an economy

4.11 *An economy consists of all the institutional units that are resident in a particular economic territory. [...]*

Units

4.13 *The main attributes of an institutional unit are that:*

- (a) it is entitled to own goods or assets in its own right; it is, therefore, able to exchange the ownership of goods or assets in transactions with other institutional units.
- (b) it is able to take economic decisions and engage in economic activities for which it is itself held to be directly responsible and accountable at law.
- (c) it is able to incur liabilities on its own behalf, to take on other obligations or future commitments, and to enter into contracts.
- (d) either a complete set of accounts, including a balance sheet, exists for the unit, or it would be possible and meaningful, from both an economic and legal viewpoint,

Annex V. Conceptual Framework of the Balance of Payments and International Investment Position

to compile a complete set of accounts if they were to be required.

Institutional units are recognized in the cases of branches and notional resident units (as discussed in *BPM6*, paragraphs 4.26–4.44) even though they may not fully satisfy criteria (a), (b), and (c).

4.14 There are two main types of units in the real world that may qualify as institutional units:

- (a) households—persons or groups of persons; and
- (b) corporations (including quasi-corporations), non-profit institutions, and government units—legal or social entities whose existence is recognized by law or society independently of the persons, or other entities, that may own or control them.

Annex VI. Classification and Standard Components of the Balance of Payments and IIP

Standard components and memorandum items

1.15 A list of standard items for presenting and reporting the balance of payments and IIP is given in *BPM6*, Appendix 9. Standard items consist of standard components and memorandum items.

(a) *Standard components are items that are fully part of the framework and contribute to the totals and balancing items.*

(b) *Memorandum items are part of the standard presentation, but are not used in deriving totals and balancing items. [...]*

In addition,

(c) *Supplementary items are outside the standard presentation, but are compiled depending on circumstances in the particular economy, taking into account the interests of policymakers and analysts as well as resource costs (see the items in italics in *BPM6*, Appendix 9).*

Major and Detailed Classification

2.13 The different accounts within the balance of payments are distinguished according to the nature of the economic resources provided and received.

Current account

2.14 *The current account shows flows of goods, services, primary income, and secondary income between residents and non-residents. The current account is an important grouping of accounts within the balance of payments. [...]*

2.15 The balance on these accounts is known as the current account balance. The current account balance shows the difference between the sum of exports and income receivable and the sum of imports and income payable (exports and imports refer to both goods and services, while income refers to both primary and secondary income). As shown in *BPM6*, Chapter 14, Selected Issues in Balance of Payments and International Investment Position Analysis, the value of the current account balance equals the saving-investment gap for the economy. Thus, the current account balance is related to understanding domestic transactions.

Goods and services account

10.1 *The goods and services account shows transactions in items that are outcomes of production activities.*

Goods

1. General merchandise

10.13 *General merchandise on a balance of payments basis covers goods whose economic ownership is changed between a resident and a nonresident and that are not included in the following specific categories: goods under merchanting (see *BPM6*, paragraphs 10.41–10.49), nonmonetary gold (*BPM6*, para-*

*graphs 10.50–10.54), and parts of travel (*BPM6*, paragraph 10.94), construction (*BPM6*, paragraph 10.101), and government goods and services n.i.e. (*BPM6*, paragraph 10.173).*

2. Other goods

a. Goods under merchanting

10.41 *Merchanting is defined as the purchase of goods by a resident (of the compiling economy) from a nonresident combined with the subsequent resale of the same goods to another nonresident without the goods being present in the compiling economy. Merchanting occurs for transactions involving goods where physical possession of the goods by the owner is unnecessary for the process to occur. [...]*

b. Nonmonetary gold

10.50 Nonmonetary gold covers all gold other than monetary gold. Monetary gold, as defined in *BPM6*, paragraphs 5.74–5.75, is owned by monetary authorities and held as a reserve asset. Nonmonetary gold can be in the form of bullion (i.e., gold bullion takes the form of coins, ingots, or bars with a purity of at least 995 parts per 1,000, including such gold held in allocated gold accounts), gold powder, and gold in other unwrought or semi manufactured forms. Jewelry, watches, and so forth that contain gold are included under general merchandise, not nonmonetary gold. [...]

Services

a. Manufacturing services on physical input owned by others

10.62 *Manufacturing services on physical inputs owned by others cover processing, assembly, labeling, packing, and so forth undertaken by enterprises that do not own the goods concerned. The manufacturing is undertaken by an entity that does not own the goods and that is paid a fee by the owner. In these cases, the ownership of the goods does not change, so no general merchandise transaction is recorded between the processor and the owner.*

b. Maintenance and repair services n.i.e.

10.72 Maintenance and repair services n.i.e. cover maintenance and repair work by residents on goods that are owned by nonresidents (and vice versa). The repairs may be performed at the site of the repairer or elsewhere. [...]

c. Transport

10.74 *Transport is the process of carriage of people and objects from one location to another as well as related supporting and auxiliary services. Also included are postal and courier service. Transport can be classified according to:*

(a) mode of transport, namely, sea, air, or other ("other" may be further broken down into rail, road, internal waterway, pipeline, and space transport as well as electricity transmission); and

Annex VI. Classification and Standard Components of the Balance of Payments and IIP

(b) what is carried—passengers or freight.

d. Travel

10.86 *Travel credits cover goods and services for own use or to give away acquired from an economy by nonresidents during visits to that economy. Travel debits cover goods and services for own use or to give away acquired from other economies by residents during visits to these other economies.* The goods and services may be purchased by the persons concerned or by another party on their behalf. For example, business travel may be paid or reimbursed by an employer, tuition and living costs of a student may be paid by a government, or health costs may be paid or reimbursed by a government or insurer. Goods and services supplied by the producer without charge are also included, such as tuition and board provided by a university.

10.87 The standard component breakdown of travel is between business and personal travel, with supplementary data for groups of special interest, such as border, seasonal, and other short-term workers. A separate supplementary breakdown of travel into types of goods and services is suggested (see *BPM6*, paragraph 10.95).

e. Construction

10.101 Construction covers the creation, renovation, repair, or extension of fixed assets in the form of buildings, land improvements of an engineering nature, and other such engineering constructions as roads, bridges, dams, and so forth. It also includes related installation and assembly work. It includes site preparation and general construction as well as specialized services such as painting, plumbing, and demolition. It also includes management of construction projects.

10.103 If the external operations of a construction enterprise are substantial enough, they constitute a branch resident in the economy of operations (see *BPM6*, paragraphs 4.27–4.29). Therefore, a large-scale construction project contracted by a nonresident enterprise that takes a year or more to complete will usually give rise to a resident branch. Accordingly, there would be a direct investment relationship between the parent and the branch; there may also be goods and services supplied between the branch and the parent, such as for materials. As a result of this treatment, the construction contracts covered in international trade in services are generally of a short-term nature.

f. Insurance and pension services

10.109 Insurance and pension services include services of providing life insurance and annuities, nonlife insurance, reinsurance, freight insurance, pensions, standardized guarantees, and auxiliary services to insurance, pension schemes, and standardized guarantee schemes. More information on insurance and pensions is provided in *BPM6*, Appendix 6c.

g. Financial services

10.118 Financial services cover financial intermediary and auxiliary services, except insurance and pension fund services. These services include those usually provided by banks and other financial corporations. They include deposit taking and lending, letters of credit, credit card services, commissions and charges related to financial leasing, factoring, underwriting, and clearing of payments. Also included are financial advisory services, custody of financial assets or bullion, financial asset management, monitoring services, liquidity provision services, risk assumption services other than insurance, merger and acquisition services, credit rating services, stock exchange services, and trust services.

10.119 Financial services may be charged for by:

- (a) explicit charges;
- (b) margins on buying and selling transactions;
- (c) asset management costs deducted from property income receivable in the case of asset-holding entities; or
- (d) margins between interest payable and the reference rate on loans and deposits (called financial intermediation service charges indirectly measured, abbreviated FISIM) [...]

h. Charges for the use of intellectual property n.i.e.

10.137 Charges for the use of intellectual property n.i.e. include:

- (a) Charges for the use of proprietary rights (such as patents, trademarks, copyrights, industrial processes and designs including trade secrets, franchises). These rights can arise from research and development, as well as from marketing; and
- (b) Charges for licenses to reproduce or distribute (or both) intellectual property embodied in produced originals or prototypes (such as copyrights on books and manuscripts, computer software, cinematographic works, and sound recordings) and related rights (such as for live performances and television, cable, or satellite broadcast). [...]

i. Telecommunications, computer, and information services

10.141 Computer and telecommunication services are defined in terms of the nature of the service, not the method of delivery. To illustrate, provision of business services, such as accounting services, is included under the appropriate heading under other business services,

Annex VI. Classification and Standard Components of the Balance of Payments and IIP

even if these services are entirely delivered by telephone, computer, or the Internet. Only amounts payable for transmission should be included under telecommunications services; downloaded content should be included in the appropriate item (computer, information, audiovisual, etc., services).

j. Other business services

Includes: Research and development services; Professional and management consulting services; Technical, trade-related, and other business services; Waste treatment and depollution, agricultural, and mining services; Operating leasing; Trade-related services; and Other business services

k. Personal, cultural, and recreational services

10.161 Personal, cultural, and recreational services consist of (a) audiovisual and related services and (b) other personal, cultural, and recreational services.

l. Government goods and services n.i.e.

10.173 Government goods and services n.i.e. cover:

- (a) goods and services supplied by and to enclaves, such as embassies, military bases, and international organizations;
- (b) goods and services acquired from the host economy by diplomats, consular staff, and military personnel located abroad and their dependents; and
- (c) services supplied by and to governments and not included in other categories of services. [...]

Primary income account

11.8 The international accounts distinguish the following types of primary income:

- (a) compensation of employees;
- (b) dividends;
- (c) reinvested earnings;
- (d) interest;
- (e) investment income attributable to policyholders in insurance, standardized guarantees, and pension funds;
- (f) rent; and
- (g) taxes and subsidies on products and production. [...]

Investment income and functional categories

1. Direct investment income

11.96 Direct investment income includes all investment income arising from direct investment positions between resident and nonresident institutional units. [...]

11.97 Direct investment relationships are defined in *BPM6*, paragraphs 6.8–6.24. Three types of direct investment relationships and associated investment income flows can be distinguished:

(a) Direct investors' investment in direct investment enterprises. This category includes investment income flows (distributed earnings, reinvested earnings, and interest) between the direct investor and its direct investment enterprises (whether in an immediate relationship or not).

(b) Reverse investment (defined in *BPM6*, paragraph 6.40). This type of relationship covers investment income flows on liabilities of direct investors to their direct investment enterprises and on claims of direct investment enterprises on their direct investors.

(c) Between fellow enterprises. This covers investment income flows between all fellow enterprises that belong to the same direct investment group.

Dividends, withdrawals from income of quasicorporations, and interest can apply for any of these types of direct investment relationships. Reinvested earnings are attributed to direct investors only when equity participation by the direct investor meets the 10 percent threshold. [...]

2. Portfolio investment income

11.103 Portfolio investment income includes income flows between residents and nonresidents arising from positions in equity and debt securities other than those classified under direct investment or reserve assets. [...]

3. Other investment income

11.106 Other investment income covers flows between resident and nonresident institutional units in regard to interest on deposits, loans, trade credit and advances, and other accounts receivable/payable; income on equity and investment fund shares that are not classified in any other functional categories; and investment income attributable to policyholders in insurance, standardized guarantees, and pension funds. Interest payable on SDR allocations is also recorded under other investment income. Fees for nonmonetary gold loans should also be included in interest under other investment income. [...]

4. Income on reserve assets

11.109 [...] Investment income on reserve assets includes income on equity and investment fund shares, and interest. [...] If not available for publication, income from reserve assets should be included in other investment–interest.

Secondary income account

12.1 *The secondary income account shows current transfers between residents and nonresidents.* Various types of current

Annex VI. Classification and Standard Components of the Balance of Payments and IIP

transfers are recorded in this account to show their role in the process of income distribution between the economies. Transfers may be made in cash or in kind. [...]

12.7 *A transfer is an entry that corresponds to the provision of a good, service, financial asset, or other nonproduced asset by an institutional unit to another institutional unit when there is no corresponding return of an item of economic value. [...]*

12.20 The international accounts classify the following types of current transfers:

Personal transfers

Other current transfers

- (a) current taxes on income, wealth, etc.,
- (b) social contributions,
- (c) social benefits,
- (d) net nonlife insurance premiums,
- (e) nonlife insurance claims,
- (f) current international cooperation, and
- (g) miscellaneous current transfers. [...]

12.21 *Personal transfers consist of all current transfers in cash or in kind made or received by resident households to or from nonresident households. Personal transfers thus include all current transfers between resident and nonresident individuals independent of:*

- (a) the source of income of the sender [...]
- (b) the relationship between the households [...]

Capital account

2.16 The capital account shows credit and debit entries for nonproduced nonfinancial assets and capital transfers between residents and nonresidents. It records acquisitions and disposals of nonproduced nonfinancial assets, such as land sold to embassies and sales of leases and licenses, as well as capital transfers, that is, the provision of resources for capital purposes by one party without anything of economic value being supplied as a direct return to that party. This account is described further in *BPM6*, Chapter 13.

13.8 Nonproduced, nonfinancial assets consist of:

- (a) natural resources;
- (b) contracts, leases, and licenses; and
- (c) marketing assets (and goodwill).

13.19 *Capital transfers are transfers in which the ownership of an asset (other than cash or inventories) changes from one party to another; or which obliges one or both parties to acquire or dispose of an asset (other than cash or inventories); or where a liability is forgiven by the creditor. [...]*

Gross and net recording

2.19 The current and capital accounts show transactions in gross terms. In contrast, the financial account shows transactions in net terms, which are shown separately for financial assets and liabilities (i.e., net transactions in financial assets shows acquisition of assets less reduction in assets, not assets net of liabilities). [...]

Net errors and omissions

2.24 Although the balance of payments accounts are, in principle, balanced, imbalances result in practice from imperfections in source data and compilation. This imbalance, a usual feature of balance of payments data, is labeled net errors and omissions and should be identified separately in published data. It should not be included indistinguishably in other items. Net errors and omissions are derived residually as net lending/net borrowing and can be derived from the financial account minus the same item derived from the current and capital accounts. Therefore, a positive value of net errors and omissions indicates an overall tendency that:

- (a) the value of credits in the current and capital accounts is too low; and/or
- (b) the value of debits in the current and capital accounts is too high; and/or
- (c) the value of net increases in assets in the financial account is too high; and/or
- (d) the value of net increases in liabilities in the financial account is too low.

(For a negative value of net errors and omissions, these tendencies are reversed.)

Financial account and International investment position

2.17 The financial account shows net acquisition and disposal of financial assets and liabilities. This account is described in *BPM6*, Chapter 8. Financial account transactions appear in the balance of payments and, because of their effect on the stock of assets and liabilities, also in the integrated IIP statement.

2.18 The sum of the balances on the current and capital accounts represents the net lending (surplus) or net borrowing (deficit) by the economy with the rest of the world. This is conceptually equal to the net balance of

Annex VI. Classification and Standard Components of the Balance of Payments and IIP

the financial account. In other words, the financial account measures how the net lending to or borrowing from non-residents is financed. The financial account plus the other changes account explain the change in the IIP between beginning- and end-periods.

2.11 The highest level of classification used in the IIP, financial account, and other changes in assets and liabilities account is the functional classification, which is covered in *BPM6*, Chapter 6. [...]

1. Direct investment

6.8. *Direct investment is a category of cross-border investment associated with a resident in one economy having control or a significant degree of influence on the management of an enterprise that is resident in another economy.* As well as the equity that gives rise to control or influence, direct investment also includes investment associated with that relationship, including investment in indirectly influenced or controlled enterprises (*BPM6*, paragraph 6.12), investment in fellow enterprises (see *BPM6* paragraph 6.17), debt (except selected debt set out in *BPM6*, paragraph 6.28), and reverse investment (see *BPM6* paragraph 6.40). The Framework for Direct Investment Relationships (FDIR) provides criteria for determining whether cross-border ownership results in a direct investment relationship, based on control and influence. The definition of direct investment is the same as in the fourth edition of the *OECD Benchmark Definition of Foreign Direct Investment*, which provides additional details on the FDIR and the collection of direct investment data. [...]

2. Portfolio investment

6.54 *Portfolio investment is defined as crossborder transactions and positions involving debt or equity securities, other than those included in direct investment or reserve assets.* [...] The negotiability of securities is a way of facilitating trading, allowing them to be held by different parties during their lives. Negotiability allows investors to diversify their portfolios and to withdraw their investment readily. Investment fund shares or units (i.e., those issued by investment funds) that are evidenced by securities and that are not reserve assets or direct investment are included in portfolio investment. Although they are negotiable instruments, exchange-traded financial derivatives are not included in portfolio investment because they are included in their own separate category.

6.57 Portfolio investment may be presented by instrument, original or remaining maturity, or institutional sector.[...]

3. Financial Derivatives (Other Than Reserves) and Employee Stock Options

6.58 The definition of the functional category financial derivatives and employee stock options (other than re-

serves) largely coincides with the corresponding financial instrument class, which is discussed in detail in *BPM6* paragraphs 5.79–5.98. The difference in coverage between the functional category and the financial instrument is that financial derivatives associated with reserve asset management are excluded from the functional category and included in reserve assets (see *BPM6*, paragraph 6.91). This category is identified separately from the other categories because it relates to risk transfer, rather than supply of funds or other resources.

6.59 Unlike other functional categories, no primary income accrues on financial derivatives. Any amounts accruing under the contract are classified as revaluations and are included in the other changes in assets and liabilities account. [...]

4. Other Investment

6.61 *Other investment is a residual category that includes positions and transactions other than those included in direct investment, portfolio investment, financial derivatives and employee stock options, and reserve assets.* To the extent that the following classes of financial assets and liabilities are not included under direct investment or reserve assets, other investment includes:

- (a) other equity;
- (b) currency and deposits;
- (c) loans (including use of IMF credit and loans from the IMF);
- (d) nonlife insurance technical reserves, life insurance and annuities entitlements, pension entitlements, and provisions for calls under standardized guarantees;
- (e) trade credit and advances;
- (f) other accounts receivable/payable; and
- (g) SDR allocations [...]

Special drawing rights

5.34 *SDRs are international reserve assets created by the IMF and allocated to members to supplement existing official reserves.* SDRs are held only by the monetary authorities of IMF members and a limited number of international financial institutions that are authorized holders. SDR holdings represent unconditional rights to obtain foreign exchange or other reserve assets from other IMF members. [...]

5.35 Holdings of SDRs by an IMF member are recorded as an asset, while the allocation of SDRs is recorded as the incurrence of a liability of the member receiving them (be-

Annex VI. Classification and Standard Components of the Balance of Payments and IIP

cause of a requirement to repay the allocation in certain circumstances, and also because interest accrues). The holdings and allocations should be shown gross, rather than netted.

5. Reserves

6.64 *Reserve assets are those external assets that are readily available to and controlled by monetary authorities for meeting balance of payments financing needs, for intervention in*

exchange markets to affect the currency exchange rate, and for other related purposes (such as maintaining confidence in the currency and the economy, and serving as a basis for foreign borrowing). Reserve assets must be foreign currency assets and assets that actually exist. Potential assets are excluded. Underlying the concept of reserve assets are the notions of “control,” and “availability for use,” by the monetary authorities. The composition of reserve assets and reserve-related liabilities is shown in BPM6, Box 6.5.

Introduction

Table des matières

- Annexe II. Présentation standard de la balance des paiements
- Annexe III. Composantes standard de la position extérieure globale
- Annexe IV. Système de codage du FMI
- Annexe V. Cadre conceptuel de la balance des paiements et de la position extérieure globale
- Annexe VI. Classification et composantes standard de la balance des paiements et de la position extérieure globale

1. Aperçu général

Le volume 65 de l'Annuaire de statistiques de la balance des paiements (*Balance of Payments Statistics Yearbook* ou BOPSY), publié par le Fonds monétaire international (FMI), présente les données relatives à la balance des paiements et à la position extérieure globale (PEG) d'après la sixième édition du *Manuel de la balance des paiements et de la position extérieure globale (MBP6)*¹. Les données sont présentées à partir de 2005. Le FMI remercie les pays de lui fournir régulièrement et en temps voulu des données détaillées aux fins de leur rediffusion. Ces données facilitent les efforts déployés par le Département des statistiques du FMI pour répondre aux besoins du FMI, de ses pays membres et de la communauté internationale en matière d'analyse et d'élaboration de la politique économique.

L'annuaire comprend deux sections: les tableaux mondiaux et régionaux (**World and Regional Tables**), soit 21 tableaux mondiaux et régionaux pour les principales composantes de la balance des paiements et de la PEG, et les tableaux pays (**Country Tables**), qui présentent les données annuelles de la balance des paiements et de la PEG des pays, juridictions et autres entités déclarantes. Les métadonnées de la balance des paiements et de la PEG (qui figuraient dans *Methodologies, Compilation Practices, and Data Sources*) sont

publiées uniquement sous forme électronique et sont disponibles dans l'eLibrary-Data² et en CD-ROM. L'annuaire est complété par la base de données en ligne et le CD-ROM qui sont mis à jour chaque mois.

Comme indiqué plus haut, la publication de l'annuaire établi sur la base du *MBP6*³ a été approuvée par le Comité des statistiques de balance des paiements du FMI. Le *MBP6* fournit des normes internationales actualisées pour les méthodes d'établissement et la présentation des statistiques de balance des paiements et de position extérieure globale. Il inclut des précisions et des améliorations qui reflètent l'évolution et l'expansion considérables des arrangements commerciaux et des marchés financiers à l'échelle mondiale depuis la publication de la cinquième édition du *Manuel de la balance des paiements (MBP5)* en 1993. Par ailleurs, les liens et la cohérence avec les autres statistiques macroéconomiques sont préservés et renforcés grâce à la mise à jour parallèle de la *Définition de référence détaillée des investissements directs internationaux de l'OCDE* et du *Système de comptabilité nationale*.

L'appendice 8 et la matrice de conversion du *MBP6* (appendice 1 du guide pour l'établissement des statistiques conformément au *MPB6*) décrivent en détail les changements apportés par rapport au *MBP5* sur le plan des concepts et de la présentation, y compris les changements de nom (par exemple, les transferts courants du *MBP5* sont appelés revenu secondaire dans le *MBP6*), l'agencement des données dans les comptes (par exemple, les données sur l'investissement direct sont présentées sur la base du principe directionnel dans le *MBP5*, alors qu'elles sont présentées sur une base stricte actif/passif dans les composantes types du *MBP6*), et les valeurs indiquées pour les comptes (par exemple, les biens qui sont envoyés à l'étranger temporairement pour y être transformés sans transfert de propriété sont inclus dans les importations et exportations brutes dans le *MBP5*, tandis que seuls les frais de transformation sont inclus dans le *MBP6*).

² Voir <http://elibrary-data.imf.org/>

³ Le volume 1 de l'annuaire, publié en 1949, a été établi sur la base de la première édition du Manuel de la balance des paiements du FMI, publiée en 1948; les volumes 2-12, sur la base de la deuxième édition, publiée en 1950; les volumes 13-23, sur la base de la troisième édition, publiée en 1961; et les volumes 24-29 sur la base de la troisième édition, ainsi que de son supplément, publié en 1973. Les volumes 30-45 ont suivi les recommandations de la quatrième édition, publiée en 1977. Les volumes 46-62 ont été présentés selon les composantes types de la cinquième édition. Cependant, les composantes types ont été modifiées avec la publication de *Dérivés financiers*: Supplément à la cinquième édition (1993), publié en 2000 et modifié en 2002. Comme indiqué plus haut, les volumes 63 et suivants ont été présentés à partir du *MBP6*.

Depuis de nombreuses décennies, le FMI publie des données établies de manière systématique à travers les pays et époques. Ce traitement systématique est nécessaire à l'analyse comparative de données entre pays, au suivi dans le temps des taux de croissance et à la production d'agrégats régionaux ou mondiaux. La difficulté, comme ce fût le cas pour l'adoption des versions précédentes du Manuel de la balance des paiements, est que les pays n'adoptent pas tous le *MBP6* au même moment. Les travaux de conversion des données entrepris par les services du FMI, en étroite collaboration avec les pays membres, ont permis de présenter selon le format du *MBP6* les données à compter de 2005 pour les pays qui n'ont pas encore mis en application le *MBP6*. Pour aider les utilisateurs à comprendre l'impact de la conversion au *MBP6*, ainsi que les principaux changements méthodologiques entre

le *MBP5* et le *MBP6*, une foire aux questions est disponible (en anglais uniquement) sur le site Web du FMI à l'adresse <http://www.imf.org/external/pubs/ft/bop/2007/bopman6.htm>.

Les méthodologies, les pratiques d'établissement des données et les sources de données des pays déclarants qui sont disponibles dans eLibrary-Data et sur CD-ROM reposent sur les renseignements fournis par les pays au FMI. Les descriptions ont pour objectif de mieux faire comprendre à l'utilisateur la couverture des données des pays, ainsi que leurs limitations. Par ailleurs, elles sont utiles pour informer les statisticiens des sources de données et des pratiques de leurs homologues dans les autres pays. Pour faciliter la communication des métadonnées sur la balance des paiements et la position extérieure globale, le cas échéant, les pays peuvent soumettre ces informations à l'aide de questionnaires en ligne.

Encadré 1. Principales règles utilisées pour la conversion générique des données du *MBP5* au *MBP6*

- Les soldes du compte des transactions courantes, du compte de capital et du compte financier; les avoirs de réserve et les erreurs nettes et omissions n'ont pas été modifiés.
- La rubrique «négoce international», qui figurait dans les services, a été reclassée parmi les biens.
- Les «services de fabrication sur des intrants physiques détenus par des tiers» («biens importés ou exportés pour transformation» dans le *MBP5*) sont reclassés parmi les services au lieu des biens. Les valeurs brutes des biens qui ont traversé physiquement des frontières pour transformation mais sans qu'il y ait transfert de propriété sont exclues du commerce de biens ;
- La «réparation de biens» est reclassée parmi les services (rubrique intitulée «services d'entretien et de réparation non inclus ailleurs» dans le *MBP6*);
- Les «achats de biens dans les ports par les transporteurs» sont inclus dans «marchandises générales (base balance des paiements)» ;
- La rubrique «services de télécommunications, d'informatique et d'information» regroupe celles des «services de communication» et «services d'informatique et d'information» du *MBP5*;
- Les «services postaux et de messagerie» sont inclus dans les «transports» ;
- La rubrique «transferts des migrants» est incluse dans «autres transferts de capital - sociétés financières, sociétés non financières, ménages et ISBLSM». (Bien que les transferts des migrants ne doivent pas figurer dans les comptes de la balance des paiements conformément au *MBP6*, le FMI n'a pas pu supprimer ce compte sans altérer les erreurs et omissions nettes, ce qui a ainsi été évité) ;
- «L'investissement à rebours» de «l'investissement direct» est reclassé sur la base des actifs/passifs ;
- En général, les données concernant les «autorités monétaires» du *MBP5* sont rattachées à la rubrique «banque centrale». Dans certains cas, les données sont rattachées (intégralement ou partiellement) aux «administrations publiques» ou à une autre unité institutionnelle en consultation avec les pays;
- L'utilisation des signes dans les présentations de la balance des paiements a été modifiée comme suit : i) dans les comptes des transactions courantes et de capital, les crédits et les débits sont enregistrés avec des signes positifs ; ii) dans le compte financier, les augmentations des actifs et les augmentations des passifs sont enregistrées avec des signes positifs, et les diminutions des actifs et les diminutions des passifs avec des signes négatifs ;
- Pour la diffusion des données par le FMI, selon l'usage bien établi de l'organisation, les données fournies par le Département financier du FMI relatives aux avoirs en DTS, aux allocations de DTS et à la position de réserve au FMI sont substituées aux données déclarées, s'il y a un écart.

2. Tableaux mondiaux et régionaux

La présente section offre des données nationales agrégées. Des données de balance des paiements sont présentées pour chaque grande composante de la balance

des paiements et de la PEG pour (i) la position extérieure globale nette et (ii) le total des actifs et le total des passifs. Des données relatives aux pays, aux groupes de pays et au monde sont fournies. Le présent volume présente des changements d'appellation et de composition de certains

regroupements régionaux: ils correspondent largement aux regroupements régionaux de l'édition d'avril 2014 des Perspectives de l'économie mondiale (PEM) du FMI. Les données figurant dans l'annuaire ont une couverture plus large que les PEM, car certaines économies, qui ne figurent pas dans cette dernière, fournissent des données sur leurs comptes extérieurs au Département des statistiques (STA). S'ajoutant aux données déclarées par les pays figurant dans les tableaux pays (voir section suivante), les données de balance des paiements des organisations internationales figurent dans cette section. Les tableaux mondiaux et régionaux comprennent dans certains cas, outre les données directement transmises, des données provenant indirectement de sources publiées.

Dans les tableaux mondiaux et régionaux, les données nationales manquantes ont été estimées par les services du FMI dans la mesure du possible. Pour la balance des paiements, la méthode d'estimation fait largement appel aux PEM. Les données publiées dans l'annuaire peuvent être différentes de celles qui sont publiées dans les PEM, principalement à cause de différences dans les dates d'enregistrement et dans la couverture (par exemple, comme noté plus haut, la présente section inclut les données sur les organisations internationales).

Les estimations de la PEG des pays qui ne communiquent pas de données reposent sur la base de données de la richesse extérieure des nations du Département des études, qui inclut les données de plus de 180 économies. Les services du FMI font largement appel à cette base de données aux fins de la surveillance multilatérale et des études; ces données sont aussi dans le domaine public. Elles sont actualisées et validées en permanence.

Les estimations des actifs et des passifs extérieurs qui figurent dans la base de données de la richesse extérieure des nations sont établies à partir de différentes sources. En général, les données officielles de la position extérieure globale sont utilisées pour les pays qui communiquent ces estimations. Les données de la position extérieure globale des pays et des années qui ne sont pas communiquées sont estimées à partir d'autres sources. Celles-ci incluent, par exemple, (i) les statistiques de la Banque des Règlements Internationaux (BRI) couvrant les données déclarées et celles des pays partenaires, (ii) les données de International Financial Statistics (IFS) sur les avoirs extérieurs des institutions de dépôts et des autres sociétés financières, (iii) les données d'IFS pour les réserves officielles, (iv) les bases de données de la plateforme conjointe de la dette extérieure (Joint External Debt Hub), de Global Development Finance de la Banque mondiale et des PEM sur les passifs au titre de la dette extérieure, (v) les flux financiers cumulés (ajustés pour tenir compte des variations de valorisation) sont tirés des données publiées par le Département des statistiques ainsi que des PEM (lorsque les données du Département des statistiques ne sont pas disponibles), (vi) les données de la Conférence des Nations Unies sur le commerce et le développement (CNUCED) sur les investissements directs étrangers (IDE), (vii) les données de l'Enquête coordonnée sur les investissements de portefeuille ainsi que (viii) les données des pays partenaires et les passifs des investisse-

ments sous forme de participation tant pour les IDE que pour les investissements de portefeuille.

La méthodologie utilisée pour compléter les données de la balance des paiements est la suivante. S'agissant des transactions sur biens et services, lorsque l'on ne dispose pas de données pour les années précédant l'année la plus récente pour laquelle des données ont été communiquées au Département des statistiques ou pour les années postérieures, les estimations sont calculées par application des taux de croissance tirés des PEM pour l'année ou les années manquante(s) aux données annuelles disponibles les plus récentes (crédits et débits). Lorsqu'on ne dispose pas de données pour l'ensemble de la période, les données des PEM sont insérées directement.

Les séries nettes des PEM sont utilisées pour l'estimation des revenus primaires, des revenus secondaires et du compte de capital. Pour estimer les revenus primaires et secondaires, il convient de reporter les chiffres disponibles de la série de la balance des paiements pour l'année la plus récente, de comparer les chiffres nets de la balance des paiements et des PEM, puis d'ajuster les chiffres (créditeurs ou débiteurs) pour que les chiffres nets de la balance des paiements et des PEM soient les mêmes. Lorsque les chiffres manquent pour des périodes antérieures à celle des données les plus récentes, on introduit directement les chiffres nets (créditeurs ou débiteurs) figurant dans les PEM. Pour l'estimation du compte de capital, on utilise directement les chiffres nets (créditeurs ou débiteurs) figurant dans les PEM. En ce qui concerne le compte financier, lorsque des chiffres sont manquants, les séries sont complétées à l'aide des chiffres figurant dans les PEM. Aucune estimation n'est effectuée pour les dérivés financiers. Les données sur les comptes du FMI — par exemple, les transactions sur droits de tirage spéciaux (DTS) ou impliquant le compte des ressources générales du FMI — sont celles dont dispose le FMI.

S'agissant de la PEG, dans certains cas, les données n'étaient ni communiquées ni incluses dans la richesse extérieure des nations pour une ou plusieurs années dans la série temporelle. Dans ces cas, les estimations ont été calculées en ajoutant aux stocks de l'année précédente les flux financiers de l'année en cours dans la mesure des disponibilités. Un petit nombre d'économies pour lesquelles le Département des statistiques et le Département de la recherche ne disposent pas de données pour l'ensemble de la période ne sont pas incluses dans les tableaux publiés. Les estimations des données manquantes, qui sont incluses des totaux régionaux et mondiaux, n'apparaissent pas pour les pays individuels concernés.

Dans la présente publication, le terme «pays» ne désigne pas toujours une entité territoriale constituant un État tel qu'il est défini selon l'usage et le droit internationaux; ce terme recouvre également la zone euro, l'Union monétaire des Caraïbes orientales, la Communauté économique et monétaire de l'Afrique centrale (CEMAC), l'Union économique et monétaire ouest-africaine (UEMOA), et certaines entités territoriales qui ne sont pas des États souverains mais sur lesquelles des données statistiques sont fournies séparément au niveau international.

Tous les tableaux de données agrégées publiés dans section des tableaux mondiaux et régionaux sont indiqués

à la table des matières. Le tableau A-1 présente un état récapitulatif des transactions internationales, qui fait apparaître les totaux mondiaux pour les principales composantes de la balance des paiements. Les tableaux A-2–A-5 indiquent, pour chaque pays, le solde du compte des transactions courantes, du compte de capital et du compte d'opérations financières ainsi que du poste des erreurs et omissions. Les tableaux B-1–B-10 font apparaître les totaux mondiaux et régionaux, ventilés par pays, des principales composantes des comptes de la balance des paiements. Chacun de ces tableaux inclut une ventilation par groupe régional, par pays et pour les organisations internationales.

Le tableau C-1 présente, pour chaque grande composante, les écarts entre les totaux mondiaux dans les statistiques de balance des paiements. Il s'agit, dans ce tableau, des écarts entre la somme des montants inscrits au débit et celle des montants passés au crédit pour les comptes des transactions courantes et de capital ainsi qu'entre la somme de l'acquisition nette d'actifs financiers et de l'accroissement net des passifs pour le compte financier, que ces montants aient été communiqués par les pays ou estimés par les services du FMI. Par exemple, l'écart indiqué pour la balance commerciale au niveau mondial est égal à la différence entre le total mondial des excédents au titre des échanges de biens et celui des montants communiqués pour les déficits au titre de ces échanges. En principe, d'après la convention adoptée pour la balance des paiements, le total mondial des exportations doit être égal à celui des importations, et le total mondial des excédents commerciaux doit être égal à celui des déficits commerciaux, le solde étant égal à zéro. En général, le même principe s'applique aux autres composantes de la balance des paiements retenues au tableau C-1.

Pour diverses raisons, toutefois, les pays n'enregistrent parfois pas toutes les transactions de façon correcte, ou passent à des postes différents les écritures de contrepartie. Dans ce cas, on observe des erreurs et omissions dans les données nationales et des asymétries (écarts) dans les statistiques mondiales. Il manque aussi des données au niveau mondial, telles que les données sur les flux financiers pour les petits centres offshore qui ne communiquent pas de données de balance des paiements au FMI. Les chiffres présentés dans le tableau C-1 reflètent ces écarts nets entre les totaux mondiaux pour les différents soldes. Le montant des erreurs et omissions nettes présenté dans le tableau est égal à la somme de l'écart constaté à l'échelle mondiale pour les comptes des transactions courantes, les comptes de capital et les comptes financiers.

Dans le compte des transactions courantes, un équilibre négatif au niveau mondial indique qu'il y a un excédent net des montants figurant au débit, lequel peut être dû à l'inscription de montants trop faibles au crédit ou trop élevés au débit, ou aux deux à la fois. Dans le compte financier, un équilibre positif tient au fait que le montant enregistré pour les sorties nettes de capitaux est surestimé (augmentation des actifs financiers et diminution des passifs), ou que celui des entrées nettes de capitaux est sous-estimé (diminution des actifs financiers et augmentation des passifs).

Les postes pour mémoire du tableau C-1 indiquent le montant total de l'écart pour certaines grandes composantes

de la balance des paiements, exprimé en pourcentage de la somme des montants passés au crédit et au débit du poste.

Les tableaux D-1, D-2 et D-3 présentent les exportations et les importations de biens et de services, ainsi que le solde du compte courant, en pourcentage du produit intérieur brut (PIB), informations d'utilité générale pour les utilisateurs de statistiques.

Le Tableau E-1 présente la position extérieure globale nette, et le Tableau E-2, le total des actifs et le total des passifs.

3. Tableaux pays

La section des tableaux pays présente les pages données par ordre alphabétique. Dans la présente publication, le terme «pays» ne désigne pas toujours une entité territoriale constituant un État tel qu'il est défini selon l'usage et le droit internationaux; ce terme recouvre également certaines entités territoriales qui ne sont pas des États souverains mais sur lesquelles des données statistiques sont fournies séparément au niveau international.

Pour chaque pays, les données de la balance des paiements sont présentées selon la présentation analytique et la présentation type. Les composantes de la balance des paiements dans la présentation analytique (tableau 1) sont présentées de manière à mettre en évidence les postes de financement (réserves et postes). La présentation type de la balance des paiements (tableau 2) et de la position extérieure globale (tableau 3) montrent les données affichées dans les composantes types décrites dans le *MBP6*.

Les tableaux 1, 2, et 3 présentent les données déclarées pour les années 2006–2013 pour chaque pays. Sauf indication contraire, les tableaux présentent des chiffres pour les années calendaires.

Balance des paiements: présentation analytique

Dans la présentation analytique qui figure au tableau 1, les composantes de la balance des paiements sont classées en cinq grandes catégories de données (groupes A à E) que le FMI considère utiles pour analyser de manière uniforme l'évolution des balances des paiements; et les transactions sont reclassées par rapport aux composantes types. Cependant, il ne faut pas considérer que les groupes sélectionnés reflètent les recommandations du FMI quant à la démarche analytique appropriée pour chaque pays. On pourrait établir d'autres présentations analytiques en regroupant les composantes types d'autres manières pour tenir compte du contexte particulier d'un pays donné ou répondre à des besoins analytiques particuliers.

Les chiffres qui figurent dans les présentations analytiques et types diffèrent pour les soldes du compte des transactions courantes, du compte de capital et du compte financier pour certains pays. Cela s'explique par le fait que, dans la présentation analytique, certaines transactions au titre de ces comptes sont reclassées parmi les « réserves et postes connexes ». Les transactions reclassées sont groupées parmi les avoirs de réserve, les crédits et les prêts du FMI, et le financement exceptionnel. Le financement exceptionnel a trait aux transactions effectuées par les autorités pour finan-

cer les besoins de financement de la balance des paiements, y compris des postes tels que les emprunts extérieurs, l'accumulation et le paiement d'arriérés, et les remises de dettes. Le financement exceptionnel exclut les avoirs de réserve, ainsi que les crédits et des prêts du FMI. (Voir aussi Annexe I).

Balance des paiements: présentation type

Les composantes types de la balance des paiements, qui figurent dans la présentation type du tableau 2, sont résumées sous les biens et services, le revenu primaire et le revenu secondaire dans le compte des transactions courantes, et aussi sous les principales composantes types dans le compte de capital. Dans le compte financier, les composantes sont classées par catégories fonctionnelles (c'est-à-dire, investissements directs, investissements de portefeuille, dérivés financiers (autres que réserves) et options sur titres des salariés, autres investissements et avoirs de réserve), par type d'instrument financier (actions, dettes et autres), séparément pour les acquisitions nettes d'actifs financiers et l'accroissement net de passifs. La plupart de ces catégories du compte financier sont ensuite classées par secteur intérieur (banque centrale; établissements de dépôts autres que la banque centrale; administrations publiques; et autres secteurs (ces derniers contenant « dont: autres sociétés financières »). (Voir aussi Annexe II.)

Position extérieure globale

Les données de PEG, qui figurent au tableau 3, sont présentées conformément aux composantes types de la position extérieure globale définies dans le *MBP6*. (Voir aussi Annexe III.)

Les données de PEG reflètent les actifs et passifs financiers extérieurs d'un pays à un moment donné. La classification des composantes de la position extérieure globale est conforme à celle du compte financier de la balance des paiements. Cette cohérence est indispensable pour une analyse exhaustive des relations entre les comptes. Les transactions financières de la balance des paiements et les autres flux (réévaluations et autres changements de volume) indiquent la contribution aux changements entre les positions d'ouverture et de clôture des actifs et passifs financiers enregistrés dans la PEG. En d'autres termes, les actifs et passifs financiers gagnent ou perdent de la valeur et apparaissent ou disparaissent du fait de transactions de la balance des paiements, d'autres changements de volume, ou de réévaluations.

La différence entre les actifs et les passifs financiers extérieurs d'une économie est la PEG nette de l'économie.

La dette extérieure n'est pas une composante distincte de la position extérieure globale, mais on peut la calculer en faisant la somme des positions de passif autres que les dérivés financiers (autres que les réserves) et les options sur titres des salariés, les actions et les parts dans les fonds de placement, et les autres actions (ce ne sont pas des instruments de dette selon les normes statistiques internationales).

Codes données

Les tableaux 1, 2, and 3 indiquent les codes pour chaque catégorie de données et chaque composante. Les codes sont

conçus pour les composantes types de la balance des paiements et les données de la position extérieure globale telles qu'elles sont définies dans le *MBP6*.

Il y a neuf chiffres/caractères pour chaque code figurant dans l'annuaire. Les deux premiers désignent le compte, le premier indiquant le compte principal, « 1 » étant attribué au compte des transactions courantes, « 2 » au compte de capital, « 3 » au compte financier et « 8 » à la position extérieure globale. Le deuxième chiffre indique le sous-compte auquel fait référence le concept, par exemple « 1A » Biens, « 1B » Services, « 1C » Revenu primaire, « 1D » Revenu secondaire, « 3A » Investissement direct, « 8A » PEG : investissements directs. Les quatre chiffres suivants sont utilisés pour classer les composants de la balance des paiements et de la position extérieure globale. Par exemple, le compte courant est codé 10999, le compte de capital 20999, et le compte financier 30999.

Le sixième chiffre indique des caractéristiques spéciales de certaines composantes. « S » indique un remplacement des comptes du Fonds et « F » indique l'exclusion du financement exceptionnel. Le septième chiffre indique l'unité comptable : « C » pour crédit, « D » pour débit, « B » pour solde, « A » pour acquisitions nettes d'actifs financiers, « L » pour accroissement net des passifs et « N » pour net. Le huitième chiffre représente les secteurs économiques. Le neuvième chiffre représente l'échéance (sur la base de l'échéance initiale): « S » pour court terme, « L » pour long terme, « A » pour toutes les échéances et « N » pour non applicable. Les lecteurs peuvent consulter l'annexe IV pour obtenir des détails sur le système de codification.

Convention des signes

Dans les présentations analytique et type (tableaux 1 et 2), les données sur les transactions figurent comme des inscriptions brutes au crédit ou au débit dans le compte des transactions courantes et le compte de capital, et comme acquisitions nettes d'actifs financiers ou accroissement net de passifs (pour refléter les variations nettes d'actifs ou de passifs) dans le compte financier. Dans le compte des transactions courantes et le compte de capital, les inscriptions au crédit et au débit sont positives (mais sans signe plus). Dans le compte financier, les augmentations des actifs et les augmentations des passifs figurent comme des montants positifs (sans signe plus), et les diminutions des actifs et les diminutions des passifs comme des montants négatifs. On obtient les soldes du compte de transactions courantes et du compte de capital en soustrayant les débits des crédits, et celui du compte financier en soustrayant l'accroissement net des passifs des acquisitions nettes d'actifs financiers. Un signe positif pour le solde du compte financier indique une augmentation nette des actifs financiers ou une diminution nette des passifs, tandis qu'un signe négatif indique une augmentation nette des passifs ou une diminution nette des actifs financiers.

Signes négatifs

La règle de conversion pour le reclassement des «services de fabrication sur des intrants physiques détenus par des tiers» («biens importés ou exportés pour transformation»

dans le MBP5) parmi les services au lieu des biens a peut-être entraîné des valeurs négatives pour ces services pour certains pays dans une période donnée. C'est le cas lorsque la valeur des importations dépasse la valeur des exportations dans le pays où s'effectue la transformation, ou lorsque la valeur des exportations dépasse la valeur des importations dans le pays partenaire.

Données nulles, non disponibles ou confidentielles

Dans les tableaux de l'annuaire, (...) indique que les données sont non disponibles, nulles ou insignifiantes, ou confidentielles. Lorsque les données pour une ou plusieurs sous-composantes ne peuvent être révélées pour des raisons de confidentialité, les valeurs non communiquées seront soit i) ajoutées à une sous-composante générique (comme « autres ») dans la composante en question, soit ii) omises sans ajustement d'une sous-composante générique. Dans un cas comme dans l'autre, le total déclaré reste inchangé; donc, dans le cas ii), il ne serait pas égal à la somme des composantes.

Arrondis

La plupart des données figurant dans les tableaux sont exprimées en unités d'un million. Cette unité est choisie pour présenter les chiffres de manière pratique. En raison des méthodes de calcul utilisées, des différences peuvent apparaître entre un agrégat et la somme de ses composantes.

Conversion de monnaie

Les données de la balance des paiements et de la position extérieure globale qui sont déclarées au FMI sont exprimées en monnaie nationale, en dollar américain ou dans une autre monnaie. Pour faciliter les comparaisons internationales, tous les états de balance des paiements et de position extérieure globale qui sont publiés dans l'annuaire et sur le CD-ROM BOPS sont exprimés en dollar américain. En outre, toutes les données déclarées par les pays sur les transactions et positions avec le FMI ainsi que les transactions et positions en DTS sont remplacées par des données obtenues dans les livres du FMI, qui sont tenus en DTS. Il s'ensuit une conversion en dollar américain.

Pour les pays qui ne déclarent pas en dollar américain, les données de la balance des paiements sont converties à

l'aide des taux de conversion qui figurent en bas du tableau 1. Ces taux sont normalement les taux moyens des International Financial Statistics (IFS) pour l'année en question. Par exemple, les pages IFS pour la zone euro contiennent la ligne « rf », qui donne les taux moyens euro/dollar américain. Les conversions de DTS en dollar américain s'effectuent aux taux figurant à la ligne « sb » des pages IFS pour les États-Unis. Pour les pays qui déclarent des données trimestrielles en monnaie nationale, on obtient les totaux annuels en dollar américain en agrégeant les chiffres trimestriels en dollar américain.

Pour les pays qui ne déclarent pas de données de la position extérieure globale en dollar américain, les données sont converties à l'aide des taux de conversion qui figurent en bas du tableau 3. Ces taux sont normalement les taux de change d'un pays en fin de période (ligne « ae ») des IFS pour l'année en question. Les lecteurs trouveront plus d'informations (en anglais uniquement) sur les taux de change utilisés dans l'introduction des IFS, Section 1, ou sur le CD-ROM des IFS dans le fichier intitulé INT.rtf.

4. Versions CD-ROM et Internet

Les statistiques publiées dans l'annuaire sont aussi disponibles sur CD-ROM et par l'eLibrary Data. Dans cette version électronique, il se peut que les séries chronologiques soient légèrement plus longues que celles figurant dans la version imprimée de l'annuaire, de même que le nombre de périodes pour lesquelles des observations sont fournies. En outre, les données trimestrielles déclarées par les pays sont disponibles, et les mises à jour et les révisions des données sont incluses à mesure qu'elles sont disponibles. Les questions sur le CD-ROM et l'eLibrary Data sont à adresser à:

Annexe IV. Système de codification du FMI pour la balance des paiements et la position extérieure globale

La structure de codification comprend les cinq segments ci-après avec une longueur fixe.

<agrégat> 2 chiffres : le premier chiffre indique le compte dont la série relève (par exemple, compte des transactions courantes, compte de capital, compte financier ou position extérieure globale) et le deuxième, la section dont la série relève au sein du compte.

<poste de la balance des paiements> 4 chiffres : indique toutes les composantes types, et certaines composantes des renseignements supplémentaires.

<position> 1 chiffre : indique l'unité comptable liée à la mesure de la valeur pour le concept.

<secteur résident> 1 chiffre : indique le secteur intérieur lié au concept.

<échéance> 1 chiffre : indique l'échéance pour le concept le cas échéant.

Le code doit inclure les cinq segments et se présente comme suit : <agrégat><poste de la balance des paiements><position><secteur résident><échéance>.

Code	Agrégat dans la balance des paiements et la position extérieure globale (PEG)
10	Compte des transactions courantes
1Z	Biens et services
1A	Biens
1B	Services
1C	Revenu primaire
1D	Revenu secondaire
20	Compte de capital

Annexe V. Cadre conceptuel de la balance des paiements et de la position extérieure globale

La présente annexe est tirée du MBP6. Les paragraphes et les chapitres qui y sont cités se rapportent à ceux du MBP6; à des fins de clarification, la mention «du MBP6» est ajoutée au texte cité pour chaque référence à un paragraphe ou chapitre du MBP6. [...] indique qu'une partie seulement du paragraphe est citée.

Cadre global

2.2 Les comptes internationaux d'une économie retracent les relations économiques entre les résidents de cette économie et les non-résidents. Ils comprennent :

a) la position extérieure globale (PEG) — état qui donne la valeur à un moment déterminé :

des actifs financiers des résidents d'une économie qui sont des créances sur les non-résidents, ou sont détenus sous la forme d'or physique à titre d'avoirs de réserve; et des passifs des résidents d'une économie à l'égard des non-résidents;

b) la balance des paiements — état où sont résumées les transactions économiques entre résidents et non-résidents pour une période donnée;

c) les comptes des autres changements des actifs et passifs financiers — état qui retrace les autres flux, tels que les réévaluations et rapproche la balance des paiements et la PEG pour une période donnée en montrant les changements dus à des événements économiques autres que les transactions entre résidents et non-résidents.

2.3 Les comptes internationaux fournissent un cadre d'analyse intégré des relations économiques internationales d'un pays, notamment de ses résultats économiques internationaux, de sa politique de change, de la gestion de ses réserves et de sa vulnérabilité externe. Une étude détaillée de l'utilisation des données sur les comptes internationaux est présentée au chapitre 14 du MBP6, Principaux aspects de l'analyse de la balance des paiements et de la position extérieure globale.

Position extérieure globale

2.8 La position extérieure globale (PEG) — état qui donne la valeur à un moment déterminé : des actifs financiers des résidents d'une économie qui sont des créances sur les non-résidents, ou sont détenus sous la forme d'or physique à titre d'avoirs de réserve; et des passifs des résidents d'une économie à l'égard des non-résidents. La différence entre les actifs et les passifs est la position nette dans la PEG et représente soit une créance nette sur le reste du monde, soit un engagement net envers lui.

Balance des paiements

2.12 La balance des paiements est un état statistique où sont résumées les transactions entre résidents et non-résidents durant

une période donnée. Elle comprend le compte des biens et services, le compte du revenu primaire, le compte du revenu secondaire, le compte de capital et le compte financier. Dans le système d'enregistrement en partie double qui est utilisé dans la balance des paiements, chaque transaction fait l'objet de deux enregistrements et la somme des montants portés au crédit est égale à celle des montants inscrits au débit. [...]

2.13 Les différents comptes de la balance des paiements se distinguent par la nature des ressources économiques fournies et reçues.

Flux et positions

3.2 Les flux désignent des actions et les effets d'événements économiques survenus au cours d'une période comptable, et les positions désignent le niveau des actifs ou des passifs à un certain moment. Les flux internationaux sont enregistrés dans les comptes comme transactions (balance des paiements) et autres changements du compte des actifs et passifs financiers. Les flux et les positions sont intégrés de sorte que toutes les variations des positions entre deux points dans le temps sont entièrement expliquées par les flux enregistrés. Les positions et les flux d'actifs et passifs financiers sont groupés conformément à la classification fonctionnelle et à la classification par instrument des actifs et passifs financiers. Les transactions non financières sont en général groupées selon leur nature et leurs caractéristiques. Les positions des actifs et passifs financiers extérieurs sont présentés dans la position extérieure globale.

Flux

3.3 Les flux représentent la création, la transformation, l'échange, le transfert ou l'extinction de valeurs économiques; ils entraînent des changements du volume, de la composition ou de la valeur des actifs et passifs d'une unité institutionnelle. C'est sur cette classification que reposent les comptes de flux, qui sont présentés aux chapitres 8–13 du MBP6. Les flux peuvent aussi être classés en a) flux associés à des transactions et b) autres flux.

a. Transactions

3.4 Une transaction est une interaction entre deux unités institutionnelles qui a lieu par accord mutuel ou par l'effet de la loi et comporte un échange de valeur ou un transfert. Les transactions sont classées selon la nature de la valeur économique fournie — à savoir des biens ou des services, un revenu primaire, un revenu secondaire, des transferts de capital, des actifs non financiers non produits, des actifs ou des passifs financiers. Les chapitres 8 et 10–13 traitent des transactions. L'expression «accord mutuel» signifie que les unités institutionnelles ont connaissance de l'interaction au préalable et qu'elles y consentent. Les transactions imposées par la loi s'appliquent principalement à certaines transactions redistributives, comme le paiement d'impôts, d'amendes et de pénalités. Bien que les impôts ou pé-

Annexe V. Cadre conceptuel de la balance des paiements et de la position extérieure globale

nalités ne soient imposés par des décisions administratives ou judiciaires qu'à des unités institutionnelles déterminées, la collectivité toute entière admet et accepte l'obligation de payer les impôts et les pénalités. En raison de l'échange de valeur, une transaction consiste en deux flux économiques, un dans chaque sens — par exemple, des biens sont fournis par une partie en échange de monnaie fournie par l'autre. La définition s'étend aux actions internes à une unité institutionnelle qu'il est analytiquement utile de traiter comme des transactions, souvent parce que l'unité exerce deux rôles différents, comme dans le cas où une de ses parties fonctionne comme une succursale. La définition est également étendue aux transferts sans contrepartie, avec l'identification du transfert comme le flux correspondant à la valeur économique fournie. Les transactions enregistrées dans les comptes internationaux ont lieu entre deux unités institutionnelles, l'une résidente de l'économie déclarante et l'autre non-résidente.

Types de transactions

3.12 Les transactions peuvent prendre des formes très diverses. Les transactions peuvent être classées selon qu'elles sont des échanges ou des transferts (voir paragraphe 3.13 du *MBP6*) et selon qu'elles sont monétaires ou non monétaires (voir paragraphe 3.14 du *MBP6*). En outre, certaines transactions sont recomposées par reformulation et décomposition (voir paragraphes 3.16-3.17 du *MBP6*) tandis que d'autres peuvent être imputées afin de refléter la relation économique sous-jacente (voir paragraphe 3.18 du *MBP6*). [...]

b. Autres flux

3.19 Les autres flux sont des changements de volume, de valeur ou de classification d'un actif ou d'un passif qui ne résultent pas d'une transaction entre un résident et un non-résident. Les autres flux sont des phénomènes économiques véritables qui appréhendent les changements des actifs et des passifs entre les positions d'ouverture et de clôture qui ne sont pas dus à des transactions. Dans le cadre des comptes internationaux, les autres flux ne sont enregistrés que pour les actifs et passifs financiers qui représentent des créances sur des non-résidents et des obligations envers ceux-ci, ainsi que pour l'or physique (voir paragraphe 3.24 du *MBP6*), car la position extérieure globale ne concerne que les actifs et passifs financiers extérieurs.

3.20 Les autres flux couvrent divers changements des actifs et passifs qui sont identifiés analytiquement en deux grands types :

a) *Les autres changements du volume d'actifs et passifs traduisent dans les bilans les entrées de nouveaux actifs et les sorties d'actifs et de passifs existants qui ne sont pas dues à*

des interactions par accord mutuel entre unités institutionnelles (c'est-à-dire à des transactions).

b) *Les réévaluations (gains et pertes de détention) d'un actif ou d'un passif découlent de variations de leurs prix et/ou des taux de change.* Les comptes internationaux répartissent ainsi les réévaluations en celles qui sont dues à des variations des taux de change et celles qui sont dues à d'autres variations de prix.

Positions

3.23 Les positions désignent le niveau d'actifs ou de passifs financiers à un moment donné. Elles sont enregistrées dans la position extérieure globale. D'une manière générale, les positions sont présentées au début et en fin de la période comptable. Les changements de position entre deux dates sont liés aux flux survenus au cours de cette période et qui comprennent les transactions et les autres flux.

3.24 Les actifs financiers sont des actifs économiques qui sont des instruments financiers. Les actifs financiers comprennent les créances financières et, par convention, l'or monétaire détenu sous forme d'or physique (y compris l'or détenu dans des comptes-or alloués). Une créance financière est un instrument financier qui est un engagement pour une contrepartie. L'or physique n'est pas une créance et n'a pas d'engagement correspondant. Cependant il est traité comme un actif financier du fait de son rôle spécial comme moyen d'échange financier dans les paiements internationaux des autorités monétaires et comme actif de réserve détenu par des autorités monétaires.

3.25 La position extérieure globale couvre les actifs et passifs financiers qui présentent un caractère international. Toutes les créances financières impliquent deux parties, elles ont donc un caractère international si la créance est détenue sur un non-résident. De même, tous les engagements impliquent deux parties, ils ont donc un caractère international s'ils sont dus envers des non-résidents. La position extérieure globale est décrite au chapitre 7.

Système comptable

3.26 Le système comptable sur lequel reposent les comptes internationaux est fondé sur des principes comptables généraux. Pour comprendre le système comptable des comptes internationaux, on peut distinguer trois principes comptables

a) comptabilité verticale en partie double (appelée simplement en comptabilité commerciale : comptabilité en partie double);

b) comptabilité horizontale en partie double;

c) comptabilité en partie quadruple.

Annexe V. Cadre conceptuel de la balance des paiements et de la position extérieure globale

Comptabilité verticale en partie double — inscriptions correspondantes

3.27 La principale caractéristique de la comptabilité verticale en partie double est que chaque transaction produit au moins deux inscriptions correspondantes, qu'on désigne traditionnellement comme inscription au crédit et inscription au débit, dans les livres de la partie à la transaction. Les comptes internationaux d'une économie doivent être établis sur la base d'une comptabilité verticale en partie double selon la perspective des résidents de cette économie. Comme chaque transaction est soit un échange, soit un transfert, elle exige deux entrées. Ce principe garantit que le total de toutes les inscriptions au crédit et celui de toutes les inscriptions au débit sont égaux, ce qui permet ainsi de vérifier la cohérence des comptes d'une unité donnée. Les reclassements produisent aussi des inscriptions au crédit et au débit. Les autres flux ont leurs inscriptions correspondantes directement dans les variations de la valeur nette. De ce fait la comptabilité verticale en partie double garantit l'identité fondamentale du bilan d'une unité, c'est à dire que la valeur totale des actifs est égale à la valeur totale des passifs plus celle de la valeur nette. La valeur totale des actifs possédés par une entité moins la valeur totale de ses passifs définit sa valeur nette. Dans les comptes internationaux, la position extérieure globale nette mesure les créances financières nettes sur les non-résidents plus l'or physique détenu comme or monétaire. Ces termes sont définis aux paragraphes 7.1-7.2 du *MBP6*.

Comptabilité horizontale en partie double — inscriptions de contrepartie

3.28 Le concept de comptabilité horizontale en partie double est utile pour établir des comptes qui reflètent les relations économiques mutuelles entre deux unités institutionnelles différentes de manière cohérente. Il signifie que si l'unité A fournit quelque chose à l'unité B, les comptes de A comme de B présentent la transaction pour le même montant: comme un paiement dans le compte de A et comme une recette dans le compte de B. La comptabilité horizontale en partie double garantit la cohérence de l'enregistrement par les contreparties pour chaque catégorie de transaction. Par exemple au niveau mondial, les dividendes payables par toutes les économies devraient être égaux aux dividendes à recevoir par toutes les économies.

Comptabilité en partie quadruple

3.29 L'application simultanée de la comptabilité verticale et de la comptabilité horizontale en partie double produit une comptabilité en partie quadruple, qui est le système comptable sur lequel repose l'enregistrement des transactions dans les comptes nationaux et dans les comptes internationaux. De plus, les définitions, les classifications et les principes comptables des comptes internationaux découlent d'une conception symétrique ainsi que d'un enregistrement symétrique par les économies

partenaires. Le système en partie quadruple traite de façon cohérente de multiples parties ou groupes de parties à des transactions, dont chacune pratique une comptabilité verticale en partie double. Une seule transaction entre deux parties donne ainsi lieu à quatre inscriptions. Contrairement à la comptabilité commerciale, les comptes internationaux traitent des interactions entre une multitude d'unités en parallèle, et exigent donc une attention particulière du point de vue de la cohérence. Comme le passif d'une unité se reflète dans l'actif financier d'une autre unité, par exemple, ils doivent être évalués, situés chronologiquement et classés de façon identique, afin d'éviter des incohérences dans l'agrégation des bilans des unités en totaux régionaux ou mondiaux. Cela s'applique également à toutes les transactions et autres flux qui influent sur les bilans des deux contreparties. Le traitement en partie quadruple des transactions dans les comptes internationaux est nécessaire aux fins des comparaisons bilatérales et des données intégrées mondiales.

Types d'inscriptions comptables

3.30 Les comptes internationaux utilisent les conventions et terminologies suivantes pour l'enregistrement des flux. Dans le compte des transactions courantes et le compte de capital et d'opérations financières, un crédit indique l'inscription d'exportations, de revenu primaire à recevoir, de transferts à recevoir, et de cessions d'actifs non financiers non produits. Un débit sert à enregistrer l'inscription d'importations, de revenu primaire à payer, de transferts à payer, et l'acquisition d'actifs non financiers non produits.

3.31 Pour les transactions sur actifs et passifs financiers, on utilise les termes «acquisition nette d'actifs financiers» et «accroissement net de passifs». Les postes du compte d'opérations financières sont enregistrés sur une base nette pour chaque actif et passif financier séparément (c'est-à-dire qu'ils reflètent tous les changements dus à des inscriptions de crédit et de débit pendant la période comptable). L'emploi des termes «acquisition nette d'actifs financiers» et «accroissement net de passifs» met en relief l'incidence du compte d'opérations financières sur la position extérieure globale. L'emploi de ces termes simplifie également l'interprétation des données. Une variation positive indique une augmentation des actifs ou des passifs et une variation négative indique une diminution des actifs ou des passifs. Cependant, selon qu'elle portera sur des actifs ou des passifs, l'augmentation ou la diminution sera interprétée comme crédit ou comme débit (pour un actif un débit est un accroissement; pour un passif un débit est une diminution). Bien que la présentation des transactions du compte d'opérations financières ne mette pas en relief les débits et les crédits, il importe de reconnaître et de maintenir les identités comptables. Par exemple, à un crédit correspond toujours conceptuellement un débit, ce dernier signifiant soit l'augmentation d'un actif soit la réduction d'un passif (voir encadré 2.1 du *MBP6*). [...]

Annexe V. Cadre conceptuel de la balance des paiements et de la position extérieure globale

Principes pour le moment d'enregistrement et l'évaluation

3.39 Le *MBP6* recommande d'employer la base des faits générateurs pour déterminer le moment d'enregistrement des flux. La base des faits générateurs associe le moment d'enregistrement à la date des événements donnant lieu aux flux de ressources effectifs. Avec la base des encaissements et décaissements, le moment d'enregistrement pourrait différer considérablement de la chronologie des activités économiques et des transactions auxquelles se rapportent les flux financiers. La comptabilité sur la base du paiement exigible enregistre en général les transactions après que les flux de ressources ont eu lieu, quoique les longs délais que causerait la base des encaissements et décaissements se trouvent réduits dans la plupart des cas. Avec la comptabilité sur la base des engagements, l'enregistrement précède le moment des flux de ressources effectifs.

3.40 La base des faits générateurs fournit l'information la plus complète car elle enregistre tous les flux de ressources, notamment les transactions non monétaires, les transactions imputées et les autres flux. Un enregistrement aussi complet assure l'intégration des flux et des changements dans les bilans. La base des faits générateurs est compatible avec la manière dont les transactions, les autres flux et les principaux agrégats économiques (balance des biens et des services, capacité/besoin de financement) sont définis. Elle est également proche de la comptabilité commerciale.

Moment d'enregistrement

a. Moment d'enregistrement des transactions

3.41 Le transfert de propriété économique est l'élément central, dans la comptabilité sur la base des faits générateurs, pour déterminer le moment d'enregistrement des transactions de biens, d'actifs non financiers non produits et d'actifs financiers. L'expression «propriété économique» reflète la réalité économique sous-jacente que les comptes économiques tentent de mesurer. La propriété économique prend en compte la détention effective des risques et avantages de la propriété. Les concepts de propriété économique et de risques et avantages qui y sont associés sont présentés plus en détail au paragraphe 5.3 du *MBP6*. D'un point de vue économique, un transfert de propriété signifie que tous les risques, avantages, droits et responsabilités de la propriété ont en pratique été transférés. En général, un transfert de la «propriété légale» implique aussi un transfert de la propriété économique. Dans certains cas, un transfert de «propriété économique» a lieu alors même que la «propriété légale» demeure inchangée (par exemple le crédit-bail et les transactions entre une entreprise et ses succursales étrangères). Dans

d'autres cas, il n'y a aucun changement dans la propriété économique, alors même que la propriété légale a été transférée. [...]

3.42 Les inscriptions des transactions en biens, actifs non financiers non produits et en actifs financiers possédés par des unités institutionnelles sont faites au moment où la propriété économique de l'actif sous-jacent est transférée. Lorsqu'un transfert de propriété économique n'est pas évident, le changement est réputé se produire (ou devenir manifeste) au moment où les parties à la transaction l'enregistrent dans leurs livres ou comptes.

b. Moment d'enregistrement des autres flux

3.60 Les autres flux comprennent les autres changements du volume d'actifs et les réévaluations. Les autres changements du volume d'actifs sont habituellement des événements discrets qui s'accumulent à des moments précis ou au cours de périodes de temps assez brèves. Les autres changements du volume d'actifs, notamment les reclassements, sont enregistrés à mesure qu'ils se produisent. Les réévaluations peuvent se produire de façon continue à mesure que les prix et les taux de change évoluent. En pratique, les réévaluations sont en général calculées entre deux points dans le temps auxquels les actifs et passifs concernés sont évalués.

Évaluation

3.67 Le *prix du marché* désigne la valeur d'échange courante, c'est-à-dire la valeur à laquelle les biens et autres actifs, les services et le travail s'échangent, ou bien pourraient être échangés contre de la monnaie. Le prix du marché est la base de l'évaluation dans les comptes internationaux. Cette section décrit les principes généraux d'évaluation des flux et positions. L'évaluation de types spécifiques de flux et de positions est exposée plus en détail dans les chapitres correspondants du *MBP6*.

a. Évaluation des transactions

3.68 Le *prix de marché d'une transaction* est défini comme le montant de monnaie qu'un acheteur consent à payer pour acquérir ce que le vendeur consent à lui vendre; l'échange a lieu entre parties indépendantes et sur la base de considérations commerciales uniquement — ce qu'on appelle parfois une «situation de pleine concurrence». Ainsi, selon cette définition stricte, le prix de marché désigne uniquement le prix d'un échange déterminé dans les conditions stipulées. Un deuxième échange d'une unité identique, même dans des conditions similaires, pourrait aboutir à un prix de marché différent. Le prix de marché défini de cette manière doit être distingué clairement d'un prix coté sur le marché, d'un prix du marché mondial, d'un prix courant, d'un juste prix marchand ou de tout autre prix censé exprimer le caractère général des prix d'une

Annexe V. Cadre conceptuel de la balance des paiements et de la position extérieure globale

classe d'échanges censés être identiques plutôt que le prix effectivement applicable à un échange déterminé. En outre, un prix de marché ne doit pas nécessairement être interprété comme l'équivalent d'un prix du marché libre; en d'autres termes, une transaction de marché ne doit pas être considérée comme ayant lieu exclusivement dans une situation de marché purement concurrentiel. En réalité une transaction marchande peut avoir lieu sur un marché à structure de monopole, de monopsonne ou de toute autre structure. En fait, le marché peut être si étroit qu'il est réduit à une seule transaction, unique en son genre, entre parties indépendantes.

b. Évaluation d'autres flux

3.81 Les autres flux des comptes internationaux saisissent les variations de la position extérieure globale en actifs et passifs financiers qui ne sont pas dues à des transactions. Les variations de la valeur de marché des positions d'actifs et de passifs financiers entraînent des gains et pertes de détention. Les gains et pertes de détention peuvent s'accumuler de façon continue. Un gain de détention apparaît lorsque la valeur d'un actif s'accroît ou que la valeur d'un passif décroît; une perte de détention apparaît lorsque la valeur d'un actif décroît ou que la valeur d'un passif s'accroît. La valeur des gains et pertes de détention encourus au cours d'une période comptable indique les gains ou pertes nets de détention des actifs et des passifs séparément. En pratique, la valeur des gains et pertes de détention est calculée pour chaque actif et chaque passif entre deux points dans le temps : le début de la période comptable (ou le moment où l'actif a été acquis ou le passif souscrit) et la fin de la période (ou le moment où l'actif a été vendu ou le passif éteint).

3.83 Les autres changements du volume d'actifs et passifs financiers sont enregistrés aux prix de marché équivalents d'instruments similaires. Pour la passation par pertes et profits d'instruments financiers évalués à leurs valeurs nominales, la valeur enregistrée dans les autres changements du compte des actifs et passifs financiers doit correspondre à leur valeur nominale antérieurement à leur passation par pertes et profits. Pour tous les reclassements d'actifs et de passifs, les valeurs des anciens et des nouveaux instruments doivent être identiques.

c. Évaluation des positions d'actifs et de passifs financiers

3.84 *Les positions en actifs et passifs financiers doivent généralement être évaluées comme si elles avaient été acquises dans des transactions sur le marché à la date de clôture du bilan.* De nombreux actifs financiers sont régulièrement échangés sur les marchés et peuvent donc être évalués directement au moyen des prix cotés sur ces marchés. Si les marchés financiers sont fermés à la date de clôture du bilan, les prix

de marché qu'il convient d'utiliser aux fins de l'évaluation sont ceux en vigueur à la précédente date la plus proche où les marchés étaient ouverts. Les titres de dette ont une valeur de marché courante ainsi qu'une valeur nominale, et des données supplémentaires sur les valeurs nominales des positions en titres de dette peuvent être utiles à certaines fins (voir au paragraphe 3.88 du *MBP6* la définition de la valeur nominale).

3.85 Pour évaluer les actifs et passifs financiers qui ne sont pas échangés sur les marchés financiers ou ne sont échangés que peu fréquemment, il faut recourir à des valeurs équivalant au prix du marché. Pour ces actifs et passifs, il est nécessaire d'estimer une juste valeur qui approche en fait le prix du marché. La valeur actualisée des flux de trésorerie futurs peut également servir de prix de marché approché, sous réserve de disposer d'un taux d'actualisation approprié.

Territoire économique

4.3 Un territoire économique est défini au sens le plus large comme une zone géographique ou une zone de compétence au sujet de laquelle des statistiques sont requises. Les liens qui unissent les entités à un territoire économique donné sont définis à partir d'aspects tels que la présence physique et la compétence exercée par les autorités publiques du territoire. Ces aspects sont examinés dans la section du présent chapitre consacrée à la résidence (voir paragraphes 4.113-4.144 du *MBP6*).

4.4 Le concept de la zone soumise au contrôle effectif d'une administration publique particulière est celui le plus communément utilisé pour définir un territoire économique. Aux fins de l'établissement des statistiques mondiales et de leur communication au FMI, il importe d'obtenir des données sur l'ensemble des domaines qui relèvent d'une administration publique particulière, y compris les zones spéciales, même si pour ses propres besoins statistiques, ces zones sont exclues ou présentées séparément. Les unions monétaires ou économiques constituent un autre type de territoire économique dont il sera question à l'appendice 3 du *MBP6*. Les portions d'une économie, les régions ou l'ensemble du monde constituent d'autres types de territoires économiques. Les territoires économiques sont un reflet de tous les champs possibles de la politique ou de l'analyse macroéconomique.

4.5 Le territoire économique comprend

- a) la superficie terrestre;
- b) l'espace aérien;
- c) les eaux territoriales, y compris les zones sur lesquelles sont exercés les droits de pêche ou d'exploitation des combustibles ou des minéraux;

Annexe V. Cadre conceptuel de la balance des paiements et de la position extérieure globale

d) dans un territoire maritime, les îles qui appartiennent au territoire;

e) les enclaves territoriales situées dans le reste du monde. Il s'agit de terrains clairement délimités (ambassades, consulats, bases militaires, stations scientifiques, bureaux d'information ou d'immigration, organismes d'aide, bureaux de représentation de banques centrales jouissant du statut diplomatique, etc.) situés dans d'autres territoires et utilisés par l'État qui en est propriétaire ou locataire à des fins diplomatiques, militaires, scientifiques ou autres, avec l'accord officiel des autorités des pays dans lesquels ils sont physiquement situés. Ces terrains peuvent être partagés avec d'autres organisations, mais les activités qui s'y déroulent doivent être très largement soustraites à l'application des lois du pays d'accueil pour qu'on puisse les considérer comme des enclaves. Les entités publiques entièrement assujetties aux lois du pays d'accueil ne sont pas considérées comme des enclaves, mais plutôt comme des résidentes du pays d'accueil.

4.6 Le territoire économique a simultanément les dimensions d'une zone de compétence juridique et d'un emplacement physique, de sorte que les sociétés créées en vertu de la loi en sont partie intégrante. Les concepts de territoire économique et de résidence sont établis pour faire en sorte que chaque unité institutionnelle ne soit résidente que d'un seul territoire économique. L'utilisation d'un territoire économique pour délimiter la portée des statistiques économiques signifie que chaque membre d'un groupe d'entreprises affiliées fait partie de l'économie dont il est résident, et non de celle où se trouve son siège. Étant donné l'importance attachée au territoire économique aux fins de l'établissement des données, il arrivera dans certains cas qu'une entité juridique soit scindée, à des fins statistiques, en unités distinctes situées dans des territoires différents, comme on l'explique en détail aux paragraphes 4.26-4.49 du *MBP6*.

Définition d'une économie

4.11 Une économie comprend toutes les unités institutionnelles qui résident sur un territoire économique particulier. [...]

Unités

4.13 Les principales caractéristiques d'une unité institutionnelle peuvent être décrites comme suit :

a) elle est en droit de posséder, de plein droit, des biens et des actifs; elle est donc capable d'échanger la propriété de biens ou d'actifs dans des opérations réalisées avec d'autres unités institutionnelles;

b) elle est capable de prendre des décisions économiques et de s'engager dans des activités économiques pour lesquelles elle est tenue directement responsable et redevable en droit;

c) elle est capable de souscrire des dettes en son nom propre, de prendre d'autres obligations ou des engagements futurs, et de conclure des contrats;

d) il existe pour l'unité un ensemble complet de comptes, y compris un bilan, ou bien il serait possible et significatif, à la fois d'un point de vue économique et d'un point de vue juridique, d'établir un ensemble complet de comptes s'ils étaient demandés.

On assimile également à des unités institutionnelles les filiales et les unités résidentes fictives (comme il est expliqué aux paragraphes 4.26-4.44 du *MBP6*) même si elles ne répondent pas entièrement aux critères a), b) et c).

4.14 Il existe, dans le monde réel, deux types principaux d'unités qui peuvent répondre à la définition d'unité institutionnelle :

a) les ménages — personnes physiques ou groupes de personnes physiques;

b) les sociétés (y compris les quasi-sociétés), les institutions sans but lucratif et les unités d'administration publique — entités juridiques ou sociales, dont l'existence est reconnue par la loi ou par la société indépendamment des personnes ou des autres entités qui peuvent en détenir la propriété ou le contrôle.

Annexe VI. Classification et composantes types de la balance des paiements et de la position extérieure globale

Composantes types et postes pour mémoire

1.15 Une liste des postes types qui est utilisée pour présenter et communiquer la balance des paiements et la position extérieure globale figure à l'appendice 9 du *MBP6*. Les postes types se subdivisent en Composantes types et Postes pour mémoire.

a) *Les composantes types sont des postes qui font partie intégrante du système et contribuent aux totaux et aux soldes.*

b) *Les postes pour mémoire font partie de la présentation type, mais ne sont pas utilisés pour calculer les totaux et les soldes. [...]*

En outre,

c) *Les postes supplémentaires ne font pas partie de la présentation type, mais sont établis en fonction des circonstances de l'économie concernée, compte tenu de l'intérêt des dirigeants et des analystes, ainsi que de leur coût (voir les postes en italique à l'appendice 9 du *MBP6*).*

Classification principale et détaillée

2.13 Les différents comptes de la balance des paiements se distinguent par la nature des ressources économiques fournies et reçues.

Compte des transactions courantes

2.14 *Le compte des transactions courantes retrace les flux de biens, de services, de revenus primaires et de revenus secondaires entre résidents et non-résidents. C'est un important groupe de comptes à l'intérieur de la balance des paiements. [...]*

2.15 Le solde de ces comptes est connu sous l'appellation de solde des transactions courantes. Ce solde est égal à la différence entre la somme des exportations et du revenu à recevoir et la somme des importations et du revenu à payer (il s'agit des exportations et importations de biens et services, et le revenu recouvre à la fois le revenu primaire et secondaire). Comme le montre le chapitre 14 du *MBP6*, Principaux aspects de l'analyse de la balance des paiements et de la position extérieure globale, la valeur du solde des transactions courantes est égale à l'écart épargne-investissement pour l'économie. Ainsi, le solde des transactions courantes entre dans la compréhension des transactions intérieures.

Compte des biens et services

10.1 *Le compte des biens et services retrace les transactions sur des composantes qui sont les produits des activités de production.*

Biens

1. Marchandises générales

10.13 *Les marchandises générales, en termes de balance des paiements, recouvrent les biens dont la propriété économique est*

*transférée entre un résident et un non-résident et qui ne sont pas inclus dans les catégories spécifiques suivantes : biens faisant l'objet de négoce international (voir paragraphes 10.41–10.49 du *MBP6*), or non monétaire (paragraphes 10.50–10.54 du *MBP6*) et certaines composantes des postes voyages (paragraphe 10.94 du *MBP6*), construction (paragraphe 10.101 du *MBP6*) et biens et services publics n.i.a. (paragraphe 10.173 du *MBP6*).*

2. Autres biens

a. Biens faisant l'objet de négoce international

10.41 *On entend par négoce international l'achat de biens par un résident (de l'économie qui établit la balance des paiements) à un non-résident, et leur revente ultérieure à un autre non-résident sans que les biens entrent dans l'économie en question. Il y a négoce international de biens lorsque leur possession physique par le propriétaire n'est pas nécessaire pour que la transaction ait lieu. [...]*

b. Or non monétaire

10.50 L'or non monétaire recouvre la totalité de l'or autre que monétaire. L'or monétaire, défini aux paragraphes 5.74–5.75 du *MBP6*, est la propriété des autorités monétaires et détenu comme avoir de réserve. L'or non monétaire peut prendre une forme physique (or physique sous forme de pièces, lingots ou barres d'une pureté d'au moins 995 millièmes, y compris l'or détenu dans les comptes or alloués), de poudre et d'autres formes non ouvrées ou semi-manufacturées. Les bijoux, montres, etc., qui contiennent de l'or sont classés au poste des marchandises générales, et non à celui de l'or non monétaire. [...]

Services

a. Services de fabrication sur des intrants physiques détenus par des tiers

10.62 *Les services de fabrication sur des intrants physiques détenus par des tiers recouvrent les services de transformation, d'assemblage, d'étiquetage, d'emballage, etc. fournis par des entreprises qui ne sont pas les propriétaires des biens en question. Les services de fabrication sont fournis par une entité qui ne détient pas la propriété des biens et qui est payée par leur propriétaire en échange de ses services. Dans pareils cas, il n'y a pas transfert de propriété, et la transaction entre le prestataire des services et le propriétaire n'est pas enregistrée dans les marchandises générales.*

b. Services d'entretien et de réparation n.i.a.

10.72 Les services d'entretien et de réparation n.i.a. recouvrent les travaux d'entretien et de réparation effectués par des résidents sur des biens qui appartiennent à des non-résidents (et vice versa). Les réparations peuvent être faites sur le site du réparateur ou ailleurs. [...]

Annexe VI. Classification et composantes types de la balance des paiements et de la position extérieure globale

c. Transports

10.74 *Le transport est le déplacement des personnes et des biens d'un lieu à un autre et recouvre les services connexes d'appui et auxiliaires, ainsi que les services postaux et de messagerie. Les transports peuvent être classés selon :*

- a) le mode de transport, à savoir transports maritime, aérien ou autres. (Les autres transports peuvent être subdivisés en transports ferroviaires, routiers, par voies navigables intérieures, par pipeline et transports spatiaux ainsi que distribution d'électricité); et
- b) l'objet du transport — passagers ou fret.

d. Voyages

10.86 *Au crédit, les voyages recouvrent les biens et services que les non-résidents acquièrent dans une économie, pour leur propre usage ou à des fins de cadeaux, au cours de leur séjour dans cette économie. Au débit, les voyages recouvrent les biens et services que les résidents d'une économie acquièrent dans d'autres économies, pour leur propre usage ou à des fins de cadeaux, au cours de leur séjour dans ces économies.* Les biens et services peuvent être achetés par les personnes concernées, ou par un tiers pour leur compte. Par exemple, les voyages à titre professionnel peuvent être payés ou remboursés par un employeur, les frais d'inscription et de séjour d'un étudiant peuvent être payés par l'État, ou les frais de santé peuvent être payés ou remboursés par l'État ou par un assureur. Les biens et services fournis à titre gratuit par le producteur sont eux aussi classés à ce poste, par exemple les cours et la pension offerts par une université.

10.87 Les composantes types des voyages sont les voyages à titre professionnel et les voyages à titre personnel, avec présentation de données supplémentaires pour les groupes présentant un intérêt particulier, tels que les travailleurs frontaliers, saisonniers et autres travailleurs temporaires. Une ventilation supplémentaire des voyages par type de biens et de services est suggérée (voir le paragraphe 10.95 du MBP6).

e. Construction

10.101 La construction recouvre la création, la rénovation, la réparation ou l'agrandissement d'actifs fixes sous la forme de bâtiments, d'aménagements de terrains relevant de l'ingénierie, et autres constructions d'ingénierie telles que les routes, ponts, barrages, etc. Ils incluent en outre les travaux d'installation et d'assemblage correspondants. Ils englobent les travaux de préparation des chantiers et de construction générale, ainsi que les services spécialisés tels que les services de peinture, de plomberie et de démolition. Enfin, ils recouvrent la gestion des projets de construction.

10.103 Si les opérations extérieures d'une entreprise de construction sont suffisamment importantes, elles correspondent à une succursale résidente de l'économie où elles se déroulent (voir les paragraphes 4.27-4.29 du MBP6). Par conséquent, un projet de construction à grande échelle dont l'exécution est confiée à une entreprise non résidente et prend un an ou plus, donnera généralement lieu à la création d'une succursale résidente. Donc, une relation d'investissement direct entre la société mère et la succursale serait établie. Des biens et services peuvent être échangés entre la succursale et la société mère, tels que des matériaux de construction. Du fait d'un tel traitement, les contrats de construction couverts dans les statistiques du commerce international des services sont généralement à court terme.

f. Services d'assurance et de pension

10.109 Les services d'assurance et de pension recouvrent l'assurance vie et les annuités d'assurance vie, l'assurance dommages, la réassurance, l'assurance du fret, les pensions, les garanties standard et les services auxiliaires d'assurances, de pension et de garantie standard. De plus amples informations sur les services d'assurance et de pension sont fournies à l'appendice 6c du MBP6.

g. Services financiers

10.118 Les services financiers recouvrent les services des intermédiaires financiers et les services auxiliaires, à l'exception de ceux des sociétés d'assurance et des fonds de pension. Ces services incluent ceux qui sont généralement fournis par les banques et autres sociétés financières. Ils comprennent la collecte des dépôts et l'octroi de prêts, les lettres de crédit, les services de carte de crédit, les commissions et frais liés aux opérations de crédit-bail, d'affacturage, de garantie et de compensation des paiements. Y sont également inclus les services de conseil financier, la conservation d'actifs financiers ou d'or physique, la gestion d'actifs financiers, les services de surveillance et de contrôle, la fourniture de liquidités, les services de prise en charge de risques autres que l'assurance, les services liés aux fusions et acquisitions, les services de notation de crédit, les services boursiers et les services de fiducie.

10.119 Les rémunérations de services financiers peuvent prendre la forme de :

- a) frais explicites;
- b) marges sur les opérations d'achat et de vente;
- c) frais de gestion déduits des revenus de la propriété à recevoir dans le cas des entités détentrices d'actifs; ou
- d) écarts entre le taux d'intérêt à payer et le taux

Annexe VI. Classification et composantes types de la balance des paiements et de la position extérieure globale

de référence sur les prêts et dépôts (appelés services d'intermédiation financière indirectement mesurés (SIFIM)).

h. Frais pour usage de propriété intellectuelle n.i.a.

10.137 Les frais pour usage de la propriété intellectuelle n.i.a. recouvrent

a) les frais pour utilisation des droits de propriété (par exemple brevets, marques commerciales, droits d'auteur, procédés de fabrication et dessins industriels, y compris secrets de fabrication, franchisage). Ces droits peuvent être le résultat d'activités de recherche et développement ainsi que de commercialisation; et

b) les frais de licence pour reproduire et/ou distribuer la propriété intellectuelle incorporée dans les œuvres originales ou prototypes créés (tels que les droits d'auteur sur les livres et manuscrits, les logiciels informatiques, les œuvres cinématographiques et les enregistrements sonores) et droits connexes (par exemple, pour les spectacles devant public et la retransmission par télévision/câble/satellite). [...]

i. Services de télécommunication, d'informatique et d'information

10.141 Les services d'informatique et d'information se définissent par leur nature et non par leur mode de livraison. Par exemple, la prestation de services aux entreprises, tels que les services de comptabilité, est incluse dans la composante appropriée du poste des autres services aux entreprises, même si ces services sont en totalité fournis par téléphone, par ordinateur ou par l'internet. Seuls les montants à payer pour la transmission doivent être classés dans les services de télécommunication; le contenu téléchargé doit être enregistré au poste approprié (services d'informatique, d'information, audiovisuels, etc.).

j. Autres services aux entreprises

Inclut : services de recherche et développement; services professionnels et de conseil en gestion; services techniques, services liés au commerce et autres services aux entreprises; services de traitement des déchets et de dépollution, services agricoles et miniers; services de location-exploitation; services liés au commerce; et autres services aux entreprises.

k. Services personnels, culturels et relatifs aux loisirs

10.161 Les services personnels, culturels et relatifs aux loisirs comprennent i) les services audiovisuels et connexes; et ii) les autres services personnels, culturels et relatifs aux loisirs.

l. Biens et services publics n.i.a.

10.173 Les biens et services publics n.i.a. recouvrent

a) les biens et services fournis ou reçus par des enclaves telles que les ambassades, les bases militaires et les organisations internationales;

b) les biens et services achetés à l'économie d'accueil par les diplomates, les effectifs consulaires et le personnel militaire en poste à l'étranger, ainsi que par les personnes qui sont à leur charge; et

c) les services fournis ou reçus par les administrations publiques et non inclus dans d'autres catégories de services. [...]

Compte du revenu primaire

Les comptes internationaux distinguent les catégories suivantes de revenus primaires :

a) rémunération des salariés;

b) dividendes;

c) bénéfices réinvestis;

d) intérêts;

e) revenus d'investissements attribuables aux détenteurs de polices d'assurance et de garanties standardisées ainsi qu'aux ayants droit d'organismes de retraite

f) loyers;

g) impôts et subventions sur les produits et la production. [...]

Revenus d'investissement et catégories fonctionnelles

1. Revenus des investissements directs

11.96 Ils se composent de tous les revenus d'investissement provenant d'investissements directs entre des unités institutionnelles résidentes et non résidentes. [...]

11.97 Les relations d'investissement direct sont définies aux paragraphes 6.8- 6.24 du *MBP6*. On peut distinguer trois catégories de relations d'investissement direct et de flux de revenus qui y sont liés :

a) L'investissement d'investisseurs directs dans des entreprises d'investissement direct. Cette catégorie se compose des flux de revenus d'investissement (bénéfices distribués, bénéfices réinvestis et intérêts) entre l'investisseur

Annexe VI. Classification et composantes types de la balance des paiements et de la position extérieure globale

direct et ses entreprises d'investissement direct (que les relations soient ou non immédiates).

b) L'investissement à rebours (défini au paragraphe 6.40 du *MBP6*). Ce type de relation (défini au paragraphe 6.40) comprend les flux de revenus d'investissement au titre des engagements des investisseurs directs envers leurs entreprises d'investissement direct et des créances des entreprises d'investissement direct sur leurs investisseurs directs.

c) Entre entreprises sœurs (à actionnaire commun). Il s'agit des flux de revenus d'investissement entre toutes les entreprises qui appartiennent au même groupe d'investissement direct.

Chacun de ces revenus d'investissements directs peut se présenter sous forme de dividendes, de prélèvements sur les bénéfices de quasi-sociétés et d'intérêts. Les bénéfices réinvestis ne sont attribués aux investisseurs directs que si leur participation atteint le seuil de 10%. [...]

2. Revenus d'investissements de portefeuille

11.103 Ils se composent des flux de revenus entre résidents et non-résidents qui découlent de la détention d'actions et de titres de créance autres que ceux classés dans les investissements directs ou les avoirs de réserve. [...]

3. Revenus des autres investissements

11.106 Les revenus des autres investissements comprennent les flux, entre unités institutionnelles résidentes et non résidentes, relatifs aux éléments suivants: intérêts sur les dépôts, les prêts, les crédits commerciaux et avances ainsi que sur d'autres sommes à recevoir ou à payer; revenus des autres participations dans le capital et de parts dans les fonds de placement qui ne sont classés dans aucune autre catégorie fonctionnelle; revenus d'investissement attribuables aux détenteurs de polices d'assurance, aux bénéficiaires de garanties standard et aux ayants droit des fonds de pension. Les intérêts à payer sur les allocations de DTS figurent aussi dans les autres revenus d'investissement. Par ailleurs, on doit inclure dans ces revenus les frais payés dans le cadre de prêts d'or non monétaire. [...]

4. Revenus des actifs de réserve

11.109 [...] Les revenus d'investissement des avoirs de réserve comprennent les produits sur actions et parts de fonds de placement ainsi que des intérêts. [...] Si les revenus d'avoirs de réserve ne sont pas disponibles pour la publication, on doit les enregistrer dans les autres investissements, en intérêts.

Compte du revenu secondaire

12.1 Le compte du revenu secondaire présente les transferts courants entre résidents et non-résidents. Divers types de

transferts courants sont enregistrés à ce compte pour montrer leur rôle dans le processus de répartition du revenu entre économies. Les transferts peuvent être en numéraire ou en nature. [...]

12.7 Un transfert est une écriture qui correspond à la fourniture d'un bien, d'un service, d'un actif financier ou d'un autre actif non produit par une unité institutionnelle à une autre unité institutionnelle sans la contrepartie d'un élément de valeur économique. [...]

12.20 Les comptes internationaux identifient les types de transferts courants suivants :

Transferts personnels

Autres transferts courants

- a) impôts courants sur le revenu, le patrimoine, etc.,
- b) cotisations sociales,
- c) prestations sociales,
- d) primes nettes d'assurance-dommages,
- e) indemnités nettes d'assurance-dommages,
- f) coopération internationale courante,
- g) transferts courants divers. [...]

12.21 Les transferts personnels comprennent tous les transferts courants en espèces ou en nature effectués par des ménages résidents à des ménages non résidents ou reçus de ménages non résidents par des ménages résidents. Les transferts personnels comprennent donc tous les transferts courants entre particuliers résidents et non résidents, quelles que soient :

- a) les sources de revenu de l'expéditeur [...]
- b) les relations entre les ménages [...]

Compte de capital

2.16 Le compte de capital fait apparaître les écritures de crédit et de débit relatives aux actifs non financiers non produits et aux transferts en capital entre résidents et non résidents. Ce compte enregistre les acquisitions et cessions d'actifs non financiers non produits, tels que les terrains vendus aux ambassades et les ventes de baux et de licences, ainsi que les transferts en capital, c'est-à-dire les cas où une partie fournit des ressources à des fins de transactions en capital sans que rien qui ait une valeur économique ne lui soit directement fourni en échange. Ce compte est décrit plus en détail au chapitre 13 du *MBP6*.

13.8 Les actifs non financiers non produits consistent en :

- a) ressources naturelles;

Annexe VI. Classification et composantes types de la balance des paiements et de la position extérieure globale

b) contrats, baux et licences; et

c) actifs de commercialisation (et éléments incorporels du fonds de commerce).

13.19 *Les transferts en capital sont des transferts pour lesquels la propriété d'un actif (autre que des espèces ou des stocks) est transférée d'une partie à une autre; ou qui obligent l'une ou les deux parties à acquérir ou à céder un actif (autre que des espèces ou des stocks); ou pour lesquels un engagement est annulé par le créancier. [...]*

Enregistrement brut ou net

2.19 Aux comptes des transactions courantes et de capital, les transactions sont comptabilisées sur une base brute. Par contre, au compte financier, les transactions sont enregistrées sur une base nette et séparément pour les actifs et les passifs financiers (c'est-à-dire que les transactions nettes sur actifs financiers correspondent à l'acquisition d'actifs moins la réduction d'actifs, et non aux actifs moins les passifs). [...]

Erreurs et omissions nettes

2.24 En principe, les comptes de la balance des paiements sont équilibrés, mais, dans la pratique, des déséquilibres sont causés par les imperfections des données-source et des méthodes d'établissement des statistiques. Ce déséquilibre, caractéristique courante des données de balance des paiements, est dénommé erreurs et omissions nettes et il faut en rendre compte séparément dans les données publiées. Il ne doit pas être inclus sans distinction dans les «autres postes». Les erreurs et omissions nettes sont calculées par soustraction : elles sont égales à la capacité ou au besoin de financement tirés du compte financier moins le poste correspondant des comptes des transactions courantes et de capital. En conséquence, une valeur positive des erreurs et omissions nettes dénote les tendances globales suivantes

a) la valeur des transactions portées au crédit des comptes des transactions courantes et de capital est trop faible; et/ou

b) la valeur des transactions portées au débit des comptes des transactions courantes et de capital est trop élevée; et/ou

c) la valeur des augmentations nettes des actifs au compte financier est trop élevée; et/ou

d) la valeur des augmentations nettes des passifs au compte financier est trop faible.

(Lorsque la valeur des erreurs et omissions nettes est négative, ces tendances sont inversées.)

Compte financier et position extérieure globale

2.17 Le compte financier fait apparaître l'acquisition et la cession nettes d'actifs et passifs financiers. Ce compte est décrit au chapitre 8 du *MBP6*. Les transactions du compte financier sont enregistrées à la balance des paiements et, en raison de leur effet sur le stock d'actifs et de passifs, figurent également dans l'état intégré de la PEG.

2.18 La somme des soldes des comptes des transactions courantes et de capital représente la capacité (excédent) ou le besoin de financement (déficit) de l'économie à l'égard du reste du monde. Elle est théoriquement égale au solde net du compte financier. En d'autres termes, le compte financier décrit le mode de financement des prêts ou emprunts nets aux non-résidents. Le compte financier plus le compte des autres changements explique la variation de la PEG entre la période d'ouverture et celle de clôture.

2.11 Le premier niveau de classification dans la PEG, le compte financier et le compte des autres changements des actifs et passifs, est la classification fonctionnelle, traitée au chapitre 6 du *MBP6*. [...]

1. Investissement direct

6.8 *L'investissement direct est une catégorie d'investissement transnational dans lequel un résident d'une économie détient le contrôle ou une influence importante sur la gestion d'une entreprise résidente d'une autre économie.* Outre la participation qui confère contrôle ou influence, l'investissement direct inclut aussi des investissements associés à cette relation, notamment des investissements dans des entreprises sous contrôle ou influence indirecte (paragraphe 6.12 du *MBP6*), des investissements dans des entreprises sœurs (paragraphe 6.17 du *MBP6*), des dettes (excepté certaines dettes définies au paragraphe 6.28 du *MBP6*), et l'investissement à rebours (voir paragraphe 6.40 du *MBP6*). Le Cadre des relations d'investissement direct (CRID) fournit des critères, fondés sur le contrôle et/ou l'influence, pour déterminer si une propriété transnationale crée une relation d'investissement direct. La définition de l'investissement direct est la même que celle de la quatrième édition de la Définition de référence de l'OCDE des investissements directs internationaux, qui fournit des détails supplémentaires sur le CRID et la collecte de données sur l'investissement direct. [...]

2. Investissement de portefeuille

6.54 *L'investissement de portefeuille est constitué par les transactions et positions transfrontalières portant sur des titres de créance ou des actions, autres que celles de l'investissement direct ou des avoirs de réserve. [...]* Les titres négociables sont faciles à échanger, ce qui leur permet de changer plusieurs fois de mains au cours de leur validité. Les titres négociables permettent aux investisseurs de diversifier leurs portefeuilles et de retirer aisément leur investissement. Les

Annexe VI. Classification et composantes types de la balance des paiements et de la position extérieure globale

unités/parts de fonds de placement (c'est-à-dire, celles émises par des fonds de placement) matérialisées par des titres et qui ne sont pas des avoirs de réserve ou des investissements directs sont incluses dans l'investissement de portefeuille. Bien qu'ils constituent des instruments négociables, les dérivés financiers normalisés ne sont pas inclus dans l'investissement de portefeuille parce qu'ils sont classés dans leur propre catégorie distincte.

6.57 L'investissement de portefeuille peut être présenté par instrument, par échéance originelle ou résiduelle, ou par secteur institutionnel.

3. Dérivés financiers (autres que les réserves) et options sur titres des employés

6.58 La définition de la catégorie fonctionnelle dérivés financiers et stocks options des employés (autres que les réserves) coïncide largement avec la classe d'instruments financiers correspondante, qui est décrite en détail aux paragraphes 5.79-5.98 du *MBP6*. La différence de couverture entre la catégorie fonctionnelle et l'instrument financier est que les dérivés financiers associés à la gestion des avoirs de réserve sont exclus de la catégorie fonctionnelle et inclus dans les avoirs de réserve (voir paragraphe 6.91 du *MBP6*). Cette catégorie est identifiée séparément des autres catégories car elle est liée au transfert de risques plutôt qu'à l'offre de fonds ou d'autres ressources.

6.59 Contrairement à d'autres catégories fonctionnelles, les dérivés financiers n'accumulent aucun revenu primaire. Tout montant accumulé au titre du contrat est classé comme réévaluation et inclus au compte des autres changements de volume. [...]

4. Autres investissements

6.61 Les autres investissements sont une catégorie résiduelle qui inclut les positions et les transactions autres que celles incluses dans les investissements directs, l'investissement de portefeuille, les dérivés financiers et stocks options des employés, et les avoirs de réserve. Elle inclut les classes suivantes d'actifs et passifs financiers :

- a) autres participations;
- b) numéraire et dépôts;
- c) prêts (y compris utilisation des crédits du FMI et prêts du FMI);

d) réserves techniques d'assurances dommages, droits acquis à prestations et à annuités d'assurance vie, droits acquis à pensions, et provisions pour appels de garanties standardisées;

e) crédits commerciaux et avances;

f) autres comptes à recevoir/à payer;

g) allocations de DTS [...]

Droits de tirage spéciaux

5.34 Les droits de tirage spéciaux (DTS) sont des avoirs de réserve internationaux créés par le FMI et alloués à ses pays membres pour compléter les réserves officielles dont ils disposent déjà. Les DTS sont détenus exclusivement par les autorités monétaires des pays membres du FMI et par un nombre limité d'institutions financières internationales désignées comme détenteurs agréés. Les DTS confèrent à leur détenteur le droit inconditionnel d'obtenir des devises ou d'autres avoirs de réserve auprès d'autres pays membres du FMI. [...]

5.35 Les avoirs en DTS détenus par un pays membre du FMI sont comptabilisés comme un actif, tandis que l'allocation de DTS est considérée comme un passif pour le pays membre qui les reçoit (parce qu'il y a obligation de rembourser l'allocation dans certaines circonstances et qu'elle donne lieu à intérêts). Les avoirs en DTS et les allocations de DTS doivent être enregistrés sur une base brute et non nette.

5. Réserves

6.64 Les avoirs de réserve sont les actifs extérieurs que les autorités monétaires contrôlent directement et dont elles peuvent disposer immédiatement pour répondre à des besoins de financement de la balance des paiements, pour intervenir sur les marchés des changes afin d'influer sur le taux de change, ainsi que pour d'autres besoins connexes (par exemple, maintenir la confiance dans la monnaie et dans l'économie, et permettre d'emprunter à l'étranger). Les avoirs de réserve doivent être des actifs en devises et des actifs existant effectivement. Les actifs potentiels sont exclus. Le concept d'avoir de réserve repose sur les notions de «contrôle» et de «disponibilité à l'emploi» par les autorités monétaires. La composition des avoirs de réserve et des passifs liés aux réserves est présentée à l'encadré 6.5 du *MBP6*.

1. Panorama general

El volumen 65 del Anuario de estadísticas de balanza de pagos (*Balance of Payments Statistics Yearbook*), publicado por el Fondo Monetario Internacional contiene datos sobre la balanza de pagos y la posición de inversión internacional (PII) que se ciñen a la sexta edición del *Manual de Balanza de Pagos y Posición de Inversión Internacional (MBP6)*¹. Los datos se presentan a partir de 2005. El FMI agradece a los países por su colaboración en haberle hecho llegar con regularidad datos exhaustivos y puntuales para que los divulgue. Estos datos respaldan los esfuerzos del Departamento de Estadística del FMI por responder a las necesidades analíticas y de política económica del FMI, de los países miembros y de la comunidad internacional.

El Anuario tiene dos partes: **World and Regional Tables** contiene 21 cuadros mundiales y regionales sobre los principales componentes de las cuentas de balanza de pagos y PII, y **Country Tables** presenta datos anuales individuales sobre la balanza de pagos y la PII de países, jurisdicciones y otras entidades informantes. Los metadatos de la balanza de pagos y la PII (incluidos previamente en la parte titulada *Methodologies, Compilation Practices, and*

Data Sources) ahora se publican únicamente en la biblioteca electrónica del FMI² y en CD-ROM. El Anuario se complementa con el CD-ROM y la base de datos en línea, que se actualizan mensualmente.

Como ya se señaló, la publicación del Anuario basada en el *MBP6*³ fue avalada por el *Comité sobre Estadísticas de Balanza de Pagos del FMI*. El *MBP6* presenta normas internacionales actualizadas que abarcan las metodologías de compilación y la presentación de las estadísticas sobre balanza de pagos y posición de inversión internacional. Contiene aclaraciones y mejoras que reflejan importantes novedades y ampliaciones ocurridas en los mercados financieros y los acuerdos comerciales internacionales desde la publicación de la quinta edición del Manual (*MBP5*) en 1993. Asimismo, se mantienen y refuerzan los vínculos y la coherencia con otras estadísticas macroeconómicas mediante la actualización paralela de la Definición Marco de Inversión Extranjera Directa (*Benchmark Definition of Foreign Direct Investment*) de la OCDE y del *Sistema de Cuentas Nacionales*.

El apéndice 8 del *MBP6* y la Matriz de Conversión al *MBP6* (apéndice 1 de la guía de compilación del *MBP6*) detallan los cambios conceptuales y de presentación respecto del *MBP5*; entre ellos, el cambio de nombre de las cuentas (p. ej., las transferencias corrientes del *MBP5* se denominan ingreso secundario en el *MBP6*), la disposición de los datos en las cuentas (p. ej., los datos sobre inversión directa se basan en el principio direccional en el *MBP5*, pero el *MBP6* los presenta estrictamente sobre una base de activos/pasivos en los componentes normalizados) y los valores indicados en las cuentas (p. ej., los bienes que fueron temporalmente enviados al extranjero para transformación sin que hubiera un cambio de propiedad figuraban como parte de las importaciones y exportaciones brutas en el *MBP5*, mientras que en el *MBP6* solamente se incluye la tarifa por la transformación).

Durante muchas décadas, el FMI ha publicado datos sobre una base que mantiene la coherencia entre países y

² Véase: <http://elibrary-data.imf.org>.

³ El volumen 1 del Anuario, publicado en 1949, se basó en la primera edición del Manual de Balanza de Pagos del FMI, publicado en 1948. Los volúmenes 2-12 se compilaban siguiendo la segunda edición del Manual, publicada en 1950; los volúmenes 13-23, la tercera, de 1961; y los volúmenes 24-29, la tercera edición y su suplemento, publicado en 1973. Los volúmenes 30-45 siguieron la cuarta edición, de 1977. Los volúmenes 46-62 se presentaron conforme a los componentes normalizados de la quinta edición (*MBP5*), aunque estos últimos cambiaron al publicarse Instrumentos Financieros Derivados: Suplemento a la quinta edición (1993) del Manual de Balanza de Pagos en 2000 y su versión enmendada en 2002. Como se señaló, el volumen 63 y los volúmenes subsiguientes se basan en el *MBP6*.

¹ El *MBP6* se publicó en 2009. Véase: <http://www.imf.org/external/pubs/ft/bop/2007/bopman6.htm>.

períodos. Esa coherencia es necesaria para realizar comparaciones entre países, observar la evolución de las tasas de crecimiento a lo largo del tiempo, y producir agregados de datos regionales o mundiales. La dificultad radica en el hecho de que, como ocurrió con la adopción de otras ediciones del Manual, los países están adoptando el *MBP6* en distintos momentos. Gracias a la conversión de datos llevada a cabo por personal del FMI, en estrecha consulta con los países miembros, es posible presentar los datos a partir de 2005 con el formato del *MBP6* para aquellas economías que aún no han adoptado el *MBP6*. Para ayudar a los usuarios a comprender el impacto de la conversión al *MBP6* y los principales cambios metodológicos que ocurren al pasar del *MBP5* al *MBP6*, se publicó en la página web del FMI una serie de

preguntas frecuentes en <http://www.imf.org/external/pubs/ft/bop/2007/bopman6.htm>.

Las metodologías, las prácticas de compilación y las fuentes de datos de los países informantes, publicadas en la sección de datos de la biblioteca electrónica y en CD-ROM, se basan en la información suministrada por los países al FMI. Las descripciones pretenden facilitar al usuario la comprensión de la cobertura de los datos de cada país, así como sus limitaciones. Al mismo tiempo, sirven para informar a los compiladores sobre las fuentes de datos y las prácticas empleadas por sus homólogos de otros países. Para facilitar la presentación de metadatos sobre las estadísticas de la balanza de pagos y la PII, según corresponda, los países pueden presentar esa información mediante cuestionarios en línea.

Recuadro 1. Algunas de las principales reglas aplicadas en la conversión genérica de datos del *MBP5* al *MBP6*

- No cambiaron los saldos de la cuenta corriente, la cuenta de capital y la cuenta financiera, ni los de los activos de reservas y los errores y omisiones netos.
- Se reclasificó la “compraventa” de servicios a bienes.
- Se reclasificaron los “servicios de manufactura sobre insumos físicos pertenecientes a otros” (“bienes para transformación” en el *MBP5*) de bienes a servicios. Los valores brutos de bienes trasladados físicamente de un país a otro para la transformación pero sin que se produzca un traspaso de la propiedad se excluyen del comercio de bienes.
- Se reclasificó la “reparación de bienes” de bienes a servicios (y se denomina “mantenimiento y reparaciones n.i.o.p.” en el *MBP6*).
- Los “bienes adquiridos en puerto por medios de transporte” se incluyen en “mercancías generales según la balanza de pagos”.
- Los “servicios de comunicaciones” y los “servicios de informática y de información” del *MBP5* se reclasificaron como “servicios de telecomunicaciones, informática e información” en el *MBP6*.
- Los “servicios postales y de mensajería” se incluyeron en “transporte”.
- Las “transferencias de emigrantes” se incluyeron en “Otras transferencias de capital—Sociedades financieras, sociedades no financieras, hogares e ISFLSH”. (Aunque las transferencias de emigrantes no deben incluirse en las cuentas de la balanza de pagos según el *MBP6*, la eliminación de esta cuenta no era posible sin afectar a los errores y omisiones netos, lo que se prefirió evitar).
- Bajo “inversión directa”, la “inversión en sentido contrario” se reclasificó de acuerdo con la base de presentación por activos/pasivos.
- En general, los datos sobre “autoridades monetarias” del *MBP5* se asignaron a “banco central”. En algunos casos, los datos se asignaron (total o parcialmente) a “gobierno general” u otras unidades institucionales en consulta con los países.
- El uso de los signos en las presentaciones de la balanza de pagos cambió de la siguiente manera: i) en la cuenta corriente y de capital, tanto los créditos como los débitos se asentaron con signo positivo; ii) en la cuenta financiera, los aumentos de los activos y los aumentos de los pasivos se asentaron con signo positivo, y las disminuciones de los activos y las disminuciones de los pasivos con signo negativo.
- En cuanto a los datos que divulga el FMI, siguiendo las prácticas institucionales tradicionales se utilizaron los datos suministrados por el Departamento Financiero del FMI sobre las tenencias y las asignaciones de DEG, así como sobre la posición de reserva en el FMI, si estos diferían de los datos declarados.

2. Cuadros mundiales y regionales

En esta sección se presentan datos agregados de países. Los datos de balanza de pagos muestran los principales componentes de la balanza de pagos, y los datos de la PII mues-

tran i) la PII neta y ii) los activos totales y los pasivos totales. Se presentan datos por países, grupos de países y mundiales. En este volumen se introdujeron cambios en los nombres y la composición de algunas agrupaciones para los agregados regionales que se corresponden en gran medida con los gru-

pos regionales que constan en la edición de abril de 2014 de Perspectivas de la economía mundial (*World Economic Outlook (informe WEO)*) del FMI. Sin embargo, el Anuario tiene una cobertura más amplia que el informe WEO debido a que algunas economías que no se incluyen en la base de datos WEO declaran datos del sector externo al Departamento de Estadística. Además de los datos declarados por los países, que figuran en los cuadros sobre países (Country Tables) del Anuario (véase la siguiente sección), en esta sección se proporcionan los datos de balanza de pagos correspondientes a los organismos internacionales. Los cuadros mundiales y regionales incluyen, además de los datos declarados, datos calculados en unos pocos casos de manera indirecta a partir de fuentes publicadas.

En los cuadros mundiales y regionales (World and Regional Tables), el personal técnico del FMI efectúa estimaciones sobre los datos faltantes en la medida de lo posible. En lo que respecta a la balanza de pagos, el procedimiento de estimación se basa en gran medida en el uso de la base de datos WEO. Los datos publicados en el Anuario pueden ser diferentes de los datos de balanza de pagos publicados en el informe WEO debido principalmente a diferencias en el momento de registro y en la cobertura (por ejemplo, como se señaló anteriormente, esta sección incluye los datos sobre los organismos internacionales).

En lo que se refiere a la PII, las estimaciones correspondientes a las economías que no declaran datos se derivan de la base de datos External Wealth of Nations (EWN) del Departamento de Estudios del FMI, que contiene datos de más de 200 economías. Los datos provenientes de esta base de datos son de dominio público y son utilizados ampliamente por el personal técnico del FMI para fines de la supervisión multilateral y para la realización de estudios. Los datos se someten constantemente a actualizaciones y validaciones.

En EWN, los activos y pasivos externos son estimados a partir de una variedad de fuentes. El caso típico es utilizar datos oficiales de la PII en el caso de los países que declaran esas estimaciones. En los casos de los países y los años sobre los cuales no se han declarado datos de la PII, los datos se estiman utilizando fuentes alternativas. Estas incluyen, por ejemplo: i) datos reportados por el Banco de Pagos Internacionales (BPI) y datos del BPI por país de contrapartida (para los activos externos), ii) datos de las Estadísticas Financieras Internacionales (EFI) sobre los activos exteriores de los bancos y de las instituciones financieras no bancarias, iii) datos de las EFI para las reservas oficiales, iv) datos del Centro Conjunto de Información sobre la Deuda Externa (JEDH), la base de datos de Flujos mundiales de financiamiento para el desarrollo (Global Development Finance) del Banco Mundial y la base de datos WEO, para los pasivos de deuda externa, v) los flujos financieros acumulados (ajustados por las variaciones de valoración) se obtienen de los datos publicados por el Departamento de Estadística así como del informe WEO (cuando los datos del Departamento de Estadística no están disponibles), vi) los datos de la Conferencia de las Naciones Unidas sobre Comercio y Desarrollo (UNCTAD) sobre inversión extranjera directa (IED), vii) los datos de la Encuesta Coordinada sobre la Inversión de Cartera para la inversión de cartera, y viii) los datos de los países de contrapartida tanto para la IED como para los activos y pasivos de la inversión accionaria de cartera.

A continuación se esboza la metodología aplicada para llenar los vacíos de información correspondientes a la balanza de pagos. Con respecto a las transacciones de bienes y servicios en años previos o posteriores al último año en que se declararon datos al Departamento de Estadística, se elaboran estimaciones aplicando las tasas de crecimiento derivadas del informe WEO con respecto a al (a los) año(s) que falta(n) en los últimos datos anuales declarados (débitos y créditos). En los casos en que existen vacíos para todo un período, se incluyen directamente los datos del informe WEO.

Para las series de datos sobre el ingreso primario, el ingreso secundario y la cuenta de capital, se elaboran estimaciones aplicando las cifras netas de la base de datos WEO. En el caso del ingreso primario y secundario, el procedimiento de estimación consiste en arrastrar hacia ejercicios posteriores los últimos valores declarados para las series de la balanza de pagos, compararlos con los datos netos del informe WEO y de la balanza de pagos, y luego ajustar los saldos acreedores o deudores de la balanza de pagos a fin de que coincida su saldos netos con las cifras netas del informe WEO. Si faltan datos con anterioridad a los últimos datos declarados, se utilizan directamente las cifras sobre el crédito neto o el débito neto derivadas del informe WEO. Para estimar la cuenta de capital, se utilizan directamente las series de datos netos del informe WEO, que se incluyen en los créditos si el informe WEO muestra un crédito neto y en los débitos si el informe WEO muestra un débito neto. Con respecto a las transacciones de la cuenta financiera, si faltan datos, los datos del informe WEO se incluyen para completar la serie. No se llevan a cabo estimaciones de derivados financieros. Los datos sobre cuentas del FMI —por ejemplo, las transacciones de DEG y las relacionadas con la Cuenta de Recursos Generales del FMI— se obtienen de fuentes del FMI.

En cuanto a la PII, en algunos casos, no se contaba con datos declarados ni con datos de la EWN sobre uno o más años de la serie temporal. En estos casos, se derivaron estimaciones añadiendo a los saldos del ejercicio previo los flujos financieros del ejercicio en curso, según estén disponibles. En los cuadros publicados no se incluyen los datos correspondientes a una pequeña cantidad de economías sobre las que no se dispone de datos sobre el periodo total en el Departamento de Estadística o el Departamento de Estudios. Las estimaciones de los datos que faltan se incluyen en los totales regionales y mundiales, pero no se presentan para los países individuales indicados.

Obsérvese que el término “país”, según se emplea en esta publicación, no siempre se refiere a una entidad territorial que constituya un Estado, conforme al derecho y a la práctica internacionales; el término también abarca la zona del euro, la Unión Monetaria del Caribe Oriental (ECCU), la Comunidad Económica y Monetaria de África Central (CEMAC), la Unión Económica y Monetaria del África Occidental (UEMAO), y ciertas entidades territoriales que no son Estados soberanos, sobre las cuales también se elaboran datos estadísticos y se facilitan a nivel internacional en forma separada.

Todos los cuadros de cifras agregadas que aparecen en la sección de cuadros mundiales y regionales (World and Regional Tables) figuran en el índice de esta publicación. El cuadro A-1 es un resumen de las transacciones interna-

cionales y presenta totales mundiales de los componentes principales de la balanza de pagos. Los cuadros A-2 a A-5 presentan los saldos, por países, de la cuenta corriente, la cuenta de capital y la cuenta financiera, así como los errores y omisiones. Los cuadros B-1 a B-10 presentan los componentes principales de la balanza de pagos. Cada uno de estos cuadros contiene un desglose por grupos regionales, por países y por organismos internacionales.

El cuadro C-1 presenta las “discrepancias mundiales” en las estadísticas de balanza de pagos en los principales componentes. Las discrepancias mundiales se refieren a las diferencias entre la suma de los asientos de débito y crédito en las cuentas corriente y de capital y entre la suma de adquisiciones netas de activos financieros y la emisión neta de pasivos de la cuenta financiera de los componentes correspondientes declarados por los países y estimados por personal del FMI. Por ejemplo, la discrepancia mundial con respecto a la balanza comercial representa la diferencia entre el agregado mundial de los superávits registrados en el comercio de bienes y el de los déficits declarados en ese rubro. En principio, conforme a las convenciones adoptadas en la balanza de pagos, los agregados mundiales de exportaciones deberían ser iguales a los de importaciones, y los superávit comerciales a nivel mundial deberían ser del mismo monto que los déficit comerciales mundiales, con lo que el saldo de la balanza comercial sería igual a cero. En general, se aplica el mismo principio a los demás 6 componentes de la balanza de pagos que se presentan en el cuadro C-1.

Sin embargo, por diferentes razones, es posible que los países no siempre registren correctamente algunas transacciones, o bien las clasifiquen de diferente manera, y es así como surgen errores y omisiones en los datos nacionales y asimetrías (discrepancias) en las estadísticas mundiales. Además, existen algunas brechas de cobertura a nivel mundial, por ejemplo en el caso de los flujos financieros correspondientes a pequeños centros extraterritoriales (offshore) que no declaran datos de la balanza de pagos al FMI. Las cifras del cuadro C-1 reflejan esas asimetrías netas mundiales para los diferentes saldos. Los errores y las omisiones netos que figuran en el cuadro representan la suma de las cifras de discrepancia mundial correspondientes a las cuentas corriente, de capital y financiera.

Dentro de la cuenta corriente, un desequilibrio mundial negativo indica un exceso neto de débitos registrados, lo que puede deberse a que se registró un monto de créditos inferior al real, un monto de débitos superior al real, o a ambas razones. Un desequilibrio mundial positivo en la cuenta financiera indica que se registraron salidas de capitales superiores a las reales (aumentos de los activos financieros y reducciones de los pasivos) o entradas inferiores a las reales (reducciones de los activos financieros y aumentos de los pasivos).

Las partidas informativas del cuadro C-1 muestran las discrepancias mundiales de ciertos componentes principales de la balanza de pagos como proporción de la suma de créditos y débitos de cada categoría.

Los cuadros D-1, D-2 y D-3 presentan las exportaciones e importaciones de bienes y servicios, y el saldo de la cuenta corriente, como porcentaje del producto interno bruto (PIB), información que es de interés general para los usuarios de los datos.

El cuadro E-1 presenta la PII neta y el cuadro E-2 presenta los Activos totales y Pasivos totales.

3. Cuadros sobre países

La sección de cuadros de países presenta las páginas de datos en orden alfabético. En esta publicación, “país” no siempre se refiere a una entidad territorial que constituya un Estado, conforme al Derecho y a las prácticas internacionales; el término también abarca algunas entidades territoriales que no son Estados soberanos, sobre las cuales también se elaboran datos estadísticos y se facilitan a nivel internacional en forma separada.

Para cada país, los datos sobre la balanza de pagos aparecen en una presentación analítica y una presentación normalizada. En la presentación analítica (cuadro 1), los componentes de la balanza de pagos están organizados de tal modo que ponen de relieve las partidas de financiamiento (reservas y partidas afines). La presentación normalizada de la balanza de pagos (cuadro 2) y de la PII (cuadro 3) muestra datos organizados según los componentes normalizados descritos en el *MBP6*.

Los cuadros 1, 2 y 3 presentan datos sobre cada país declarados para los años 2006–2013. Salvo indicación en contrario, se trata de años civiles.

Balanza de pagos: Presentación analítica

En la presentación analítica (cuadro 1), los componentes de la balanza de pagos se clasifican en cinco categorías principales (grupos A a E) que el FMI considera útiles para analizar con uniformidad la evolución de la balanza de pagos; las transacciones, por su parte, se reclasifican respecto de los componentes normalizados. Sin embargo, no debe interpretarse que los grupos seleccionados reflejan recomendaciones del FMI sobre el enfoque analítico que corresponde aplicar en todos los países. Se podrían hacer otras presentaciones analíticas reagrupando de diferente manera los componentes normalizados para tener en cuenta las circunstancias propias de un país o para atender determinadas necesidades analíticas.

En el caso de algunos países, las cifras que acompañan las presentaciones analítica y normalizada difieren en los saldos de la cuenta corriente, la cuenta de capital y la cuenta financiera. La razón es que, en la presentación analítica, ciertas transacciones asentadas en estas cuentas se reclasifican como “reservas y partidas afines”. Las transacciones reclasificadas se agrupan bajo activos de reserva, créditos y préstamos del FMI y financiamiento excepcional. El financiamiento excepcional se refiere a las transacciones realizadas por las autoridades para financiar las necesidades de balanza de pagos, e incluye partidas como endeudamiento externo, acumulación y pago de atrasos, y condonación de la deuda. El financiamiento excepcional excluye las partidas de activos de reserva y de crédito y préstamos del FMI. (Véase también el anexo I.)

Balanza de pagos: Presentación normalizada

Los componentes normalizados de la balanza de pagos, que figuran en la presentación normalizada del cuadro 2, se resumen bajo bienes y servicios, ingreso primario e

ingreso secundario en la cuenta corriente, y también bajo los principales componentes normalizados de la cuenta de capital. En la cuenta financiera, los componentes se clasifican por categoría funcional (es decir, inversión directa, inversión de cartera, derivados financieros (distintos de reservas) y opciones de compra de acciones por parte de empleados (OCAE), otra inversión y activos de reserva), por tipo de instrumento financiero (participaciones de capital, deuda y otros), separadamente de las adquisiciones netas de activos financieros y la emisión neta de pasivos. La mayoría de estas categorías de la cuenta financiera se subdividen en sector interno (banco central; sociedades captadoras de depósitos excepto el banco central; gobierno general y otros sectores (que a su vez contiene como una de sus subdivisiones "otras sociedades financieras")). (Véase también el anexo II.)

Posición de inversión internacional

Los datos sobre la PII (cuadro 3) se organizan de acuerdo con los componentes normalizados de la PII que figuran en el *MBP6*. (Véase también el anexo III.)

Los datos sobre la PII reflejan los activos y pasivos financieros externos de un país en un momento determinado. La clasificación de los componentes de la PII concuerda con la clasificación de la cuenta financiera de la balanza de pagos. Esa coherencia es necesaria para poder analizar a fondo las relaciones entre una y otra. Las transacciones financieras de la balanza de pagos y otros flujos (revaloraciones y otras variaciones del volumen) muestran la contribución a los cambios ocurridos entre las posiciones de apertura y de cierre de los activos y pasivos financieros asentados en la PII. En otras palabras, los activos y pasivos financieros adquieren o pierden valor y aparecen o desaparecen como consecuencia de las transacciones de la balanza de pagos, otras variaciones del volumen y/o revaloraciones.

La PII neta se deriva tomando la diferencia entre el valor de los activos y pasivos financieros externos.

La deuda externa no es un componente separado de la PII pero puede derivarse sumando las posiciones de pasivos que no sean derivados financieros (distintos de reservas) y OCAE, participaciones de capital y en fondos de inversión, y otras participaciones de capital (ya que no son instrumentos de deuda según las normas estadísticas internacionales).

Codificación de los datos

Los cuadros 1, 2 y 3 presentan los códigos correspondientes a cada categoría y componente de datos. Los códigos están diseñados para los componentes normalizados de los datos de la balanza de pagos y la PII según la definición del *MBP6*.

Cada código contiene nueve dígitos o caracteres para cada código del Anuario. Los dos primeros designan la cuenta: el primero indica la cuenta principal ("1" es la cuenta corriente, "2" es la cuenta de capital, "3" es la cuenta financiera y "8" es la PII); y el segundo, la subcuenta (p. ej. "1A" es servicios, "1B" es bienes, "1C" es ingreso primario, "1D" es ingreso secundario, "3A" es inversión directa, "8A" es PII: inversión directa). Los cuatro dígitos siguientes sirven para clasificar los componentes de la balanza de pagos y los com-

ponentes de la PII. Por ejemplo, la cuenta corriente lleva el código 10999; la cuenta de capital, 20999; y la cuenta financiera, 30999.

El sexto dígito o carácter del código denota características especiales de determinados componentes de datos. En este espacio, "S" indica la sustitución de cuentas del FMI y "F" indica la exclusión del financiamiento excepcional. El séptimo dígito indica la unidad contable: "C" es crédito, "D" es débito, "B" es saldo, "A" es adquisición neta de activos financieros, "L" es emisión neta de pasivos y "N" es neto. El octavo dígito representa los sectores económicos, y el noveno, el vencimiento (sobre la base de vencimiento original): "S" indica corto plazo; "L", largo plazo; "A", todos los vencimientos; y "N", no corresponde. El anexo IV detalla el plan de codificación.

Convención empleada con los signos

Tanto en la presentación analítica como en la normalizada (cuadros 1 y 2), los datos sobre las transacciones aparecen como asientos de crédito bruto o débito bruto en las cuentas corriente y de capital, y como adquisición neta de activos financieros o emisión neta de pasivos (para reflejar las variaciones netas de activos o las variaciones netas de pasivos) en la cuenta financiera. En las cuentas corriente y de capital, tanto los asientos de crédito como los de débito son positivos (pero sin el signo de más). En la cuenta financiera, los aumentos de activos y los aumentos de pasivos aparecen como valores positivos (sin el signo de más) y las disminuciones de activos y las disminuciones de pasivos, como valores negativos. Los saldos de la cuenta corriente y la cuenta de capital se obtienen sustrayendo el débito del crédito, y el saldo de la cuenta financiera se calcula sustrayendo la emisión neta de pasivos de la adquisición neta de activos financieros. Un signo positivo junto al saldo de la cuenta financiera indica un aumento neto de activos financieros, y/o una reducción neta de pasivos, en tanto que un signo negativo indica un aumento neto de pasivos y/o una reducción neta de activos financieros.

Signos negativos

La regla utilizada en la conversión genérica para la reclasificación de "servicios de manufactura sobre insumos físicos pertenecientes a otros" ("bienes para transformación" en el *MBP5*) a fin de pasarlos de bienes a servicios puede haber generado valores negativos para estos servicios en algunas economías en un período determinado. Eso ocurre cuando el valor de las importaciones supera el valor de las exportaciones en la economía en la cual ocurre la transformación, o cuando el valor de las exportaciones supera el valor de las importaciones en la economía social.

Valores cero o desconocidos y datos confidenciales

En los cuadros del Anuario, los puntos suspensivos (...) indican que los datos son desconocidos o de valor cero o insignificante, o son confidenciales. Cuando no se pueden revelar los datos de uno o más subcomponentes por razones de confidencialidad, el valor no divulgado i) se suma a un subcomponente genérico (tal como "otros") del componente en cuestión, o bien ii) se omite sin ajustar un subcomponente genérico. En uno y otro caso, el total declarado no cambia; por ende, en el caso ii), no es igual a la suma de los componentes.

Redondeo de cifras

El grueso de los datos de los cuadros está expresado en unidades de un millón para facilitar la consulta. Debido a las rutinas de cálculo utilizadas, puede haber diferencias por redondeo entre un agregado y la suma de sus componentes.

Conversión de monedas

Los datos sobre la balanza de pagos y la PII presentados al FMI están expresados en moneda nacional, en dólares de EE.UU. o en otra moneda. Para facilitar las comparaciones entre países, todos los estados sobre la balanza de pagos y la PII publicados en el Anuario y el CD-ROM están expresados en dólares de EE.UU. Además, los datos declarados por todos los países sobre las transacciones y las posiciones en el FMI y las transacciones y las posiciones en DEG se reemplazan con datos tomados de los registros del FMI, que se llevan en DEG. Esta información se convierte a su vez en dólares de EE.UU.

En el caso de los países que no declaran datos en dólares de EE.UU., los datos sobre la balanza de pagos se convierten usando los tipos de conversión indicados al final del cuadro 1. Estos tipos generalmente corresponden al tipo de cambio promedio del país en cuestión durante el año que corresponde, tomado de la publicación International Financial Statistics (IFS). Por ejemplo, las páginas de IFS correspondientes a la zona del euro contienen la línea "rf", que muestra los tipos de cambio promedio euro/dólar de EE.UU. Al realizar las conversiones de DEG a dólares de EE.UU. en los datos sobre las transacciones, se emplean los tipos indicados en la línea "sb" de las páginas de IFS sobre Estados Unidos. En el caso de los países que declaran datos trimestrales en moneda nacional, se obtienen los totales

anuales en dólares de EE.UU. mediante una agregación de las cifras trimestrales en dólares de EE.UU.

En el caso de los países que no declaran datos sobre la PII en dólares de EE.UU., los datos se convierten aplicando el tipo de conversión indicado al final del cuadro 3. Estos tipos suelen ser los tipos de cambio de un país al final del período (línea "ae") del año en cuestión tomados de IFS. Para más información sobre los tipos de cambio utilizados, consúltese la introducción a IFS, sección 1, o el archivo INT.rtf del CD-ROM que contiene la publicación IFS.

4. Versiones en CD-ROM y en Internet

Las estadísticas publicadas en el Anuario pueden consultarse también en CD-ROM y a través del servicio de datos de la biblioteca electrónica del FMI (eLibrary Data). En esta versión electrónica, las series de tiempo pueden ser ligeramente más largas que en la versión impresa, y lo mismo puede ocurrir con el número de períodos que abarcan las observaciones de datos. Estas dos fuentes contienen también los datos trimestrales declarados por los países, actualizaciones y revisiones. Toda consulta sobre la versión en CD-ROM e Internet debe dirigirse a:

Anexo IV. Sistema de codificación del FMI para balanza de pagos y posición de inversión internacional

La estructura de codificación consta de los siguientes cinco segmentos de longitud fija.

<agregado> dos dígitos: El primer dígito identifica la cuenta a la que pertenece la serie (por ejemplo, cuenta corriente, cuenta de capital, cuenta financiera o posición de inversión internacional). El segundo dígito denota la sección a la que pertenece la serie dentro de la cuenta.

<Partida de balanza de pagos> cuatro dígitos: Identifica todos los componentes normalizados, y ciertos componentes de información complementaria.

<posición> un dígito: Identifica la unidad contable asociada con la medición de valor del concepto.

<sector residente> un dígito: Identifica el sector interno asociado con el concepto.

<vencimiento> un dígito: Identifica el plazo de vencimiento correspondiente al concepto, si corresponde.

El código exige que se indiquen los cinco segmentos y tiene la siguiente forma: <agregado><partida de balanza de pagos><posición><sector residente><vencimiento>.

Code	Agregado en balanza de pagos I posición de inversión internacional (PII)
10	Cuenta corriente
1Z	Bienes y servicios
1A	Bienes
1B	Servicios
1C	Ingreso primario
1D	Ingreso secundario
20	Cuenta de capital
30	Cuenta financiera
3A	Inversión directa
3B	Inversión de cartera
3C	Derivados financieros (distintos de reservas) y opciones de compra de acciones por parte de empleados
3D	Otra inversión
3E	Activos de reserva
4Y	Partida equilibradora de la cuenta corriente, de capital y financiera
40	Errores y omisiones netos
4Z	Reservas y partidas afines
80	Activos/pasivos (PII)
8A	Inversión directa (PII)
8B	Inversión de cartera (PII)
8C	Derivados financieros (PII)
8D	Otra inversión (PII)
8E	Activos de reserva (PII)

Anexo V. Marco conceptual de la balanza de pagos y de la posición de inversión internacional

Este anexo es una reproducción y un resumen de la sexta edición del Manual de Balanza de Pagos y Posición de Inversión Internacional (MBP6). Los párrafos y capítulos que se citan en este anexo corresponden a los que constan en el MBP6; para aclarar este hecho, al texto citado se le añade la expresión “del MBP6” antes de cada referencia a un párrafo, capítulo o recuadro específico del MBP6. Tres puntos entre corchetes [...] indican que se omite parte del párrafo.

Marco general

2.2 Las cuentas internacionales de una economía resumen las relaciones económicas entre los residentes y los no residentes de dicha economía. Ellas comprenden:

- a) La posición de inversión internacional (PII) — un estado que muestra el valor, en un momento dado, de los activos financieros de los residentes de una economía que constituyen derechos sobre activos de no residentes o lingotes de oro mantenidos en calidad de activos de reserva, y los pasivos de los residentes de una economía frente a no residentes.
- b) La balanza de pagos — un estado que resume las transacciones económicas entre residentes y no residentes durante un período determinado.
- c) Las demás variaciones de las cuentas de activos y pasivos financieros — un estado en el que se recogen otros flujos, como las variaciones por valoración, que concilian la balanza de pagos y la PII correspondientes a un período determinado, indicando las variaciones suscitadas por fenómenos económicos distintos de las transacciones entre residentes y no residentes.

2.3 Las cuentas internacionales ofrecen un marco integrado para el análisis de las relaciones económicas de una economía con el resto del mundo; entre ellas, sus resultados económicos internacionales, su política cambiaria, su gestión de las reservas y su vulnerabilidad externa. En el capítulo 14 del MBP6, Cuestiones seleccionadas en el análisis de la balanza de pagos y la posición de inversión internacional, se presenta un estudio detallado del uso de la información correspondiente a las cuentas internacionales.

Posición de inversión internacional

2.8 La posición de inversión internacional (PII) es un estado estadístico que muestra el valor, en un momento dado, de los activos financieros de residentes de una economía que constituyen derechos sobre activos de no residentes o los lingotes de oro mantenidos en calidad de activos de reserva, y los pasivos de los residentes de una economía frente a no residentes. La diferencia entre los activos y pasivos es la posición neta en la PII y representa un activo neto, o un pasivo neto, frente al resto del mundo.

Balanza de pagos

2.12 La balanza de pagos es un estado estadístico que resume las transacciones entre residentes y no residentes durante un período. Comprende la cuenta de bienes y servicios, la cuenta del ingreso primario, la cuenta del ingreso secundario, la cuenta de capital y la cuenta financiera. En virtud del sistema de contabilidad por partida doble que se utiliza en la balanza de pagos, cada transacción se registra mediante dos asientos, y la suma de los asientos de crédito es igual a la suma de los asientos de débito. [...]

2.13 Las diversas cuentas que conforman la balanza de pagos se distinguen según la naturaleza de los recursos económicos suministrados y recibidos.

Flujos y posiciones

3.2 Los flujos se refieren a las acciones económicas y los efectos de eventos que ocurren dentro de un período contable, en tanto que las posiciones se refieren al nivel de los activos o pasivos en un momento determinado. Los flujos internacionales se registran en las cuentas como transacciones (balanza de pagos) y en la cuenta de otras variaciones de los activos y pasivos financieros. Los flujos y las posiciones se integran de manera que los flujos registrados expliquen completamente todas las variaciones de posiciones entre dos momentos determinados. Las posiciones y los flujos de los activos y pasivos financieros se agrupan de acuerdo con las clasificaciones funcionales y por instrumento de los activos y pasivos financieros. Las transacciones no financieras por lo general se agrupan en función de su naturaleza y sus características. Las posiciones de activos y pasivos financieros frente al exterior figuran en la posición de inversión internacional. [...]

Flujos

3.3 Los flujos reflejan la creación, la transformación, el intercambio, la transferencia o la extinción de valor económico; implican cambios en el volumen, la composición o el valor de los activos y pasivos de una unidad institucional. Esta clasificación es el fundamento de las cuentas de flujos, descritas en los capítulos 8–13 del MBP6. Los flujos también pueden clasificarse en a) los que están relacionados con transacciones y b) otros flujos.

a. Transacciones

3.4 Una transacción es una interacción entre dos unidades institucionales que ocurre por mutuo acuerdo o en virtud de la ley y que implica un intercambio de valor o una transferencia. Las transacciones se clasifican de acuerdo con la naturaleza del valor económico proporcionado, a saber, bienes o servicios, ingreso primario, ingreso secundario, transferencias de capital, activos no financieros no producidos, activos o pasivos financieros. En los capítulos 8 y 10–13 del MBP6 se analizan las transacciones. Acuerdo mutuo significa que existen conocimiento y consentimiento previos por parte

Anexo V. Marco conceptual de la balanza de pagos y de la posición de inversión internacional

de las unidades institucionales. Las transacciones establecidas por ley son aplicables principalmente a ciertas transacciones distributivas, como el pago de impuestos, multas y sanciones. Si bien los impuestos o las sanciones se aplican a unidades institucionales individuales en virtud de decisiones administrativas o judiciales, la comunidad reconoce y acepta de forma colectiva la obligación de pagar impuestos y sanciones. Debido al intercambio de valor, una transacción comprende dos flujos económicos, uno en cada sentido; por ejemplo, bienes suministrados por una parte a cambio de dinero proporcionado por la otra parte. La definición se extiende a acciones dentro de una unidad institucional que a efectos analíticos conviene tratar como transacciones, ya que con frecuencia la unidad opera en dos capacidades distintas, como cuando una parte opera como sucursal. La definición también abarca las transferencias unilaterales, para lo cual las transferencias se identifican como el flujo correspondiente al valor económico proporcionado. Las transacciones registradas en las cuentas internacionales se producen entre dos unidades institucionales, una residente en la economía compiladora y la otra no residente

Tipos de transacciones

3.12 Las transacciones pueden ser de muy diversas formas. Las transacciones pueden clasificarse según sean intercambios o transferencias (véase el párrafo 3.13 del *MBP6*), y según sean monetarias o no monetarias (véase el párrafo 3.14 del *MBP6*). Por otro lado, ciertas transacciones se reorganizan mediante el redireccionamiento o la partición (véanse los párrafos 3.16-3.17 del *MBP6*), mientras que otras transacciones se imputan para reflejar las relaciones económicas subyacentes (véase el párrafo 3.18 del *MBP6*). [...]

b. Otros flujos

3.19 Los otros flujos son las variaciones en el volumen, el valor o la clasificación de un activo o un pasivo que no se derivan de una transacción entre un residente y un no residente. Los otros flujos constituyen fenómenos económicos legítimos y reflejan variaciones de los activos y pasivos entre las posiciones de apertura y de cierre que no se derivan de transacciones. En el contexto de las cuentas internacionales, los otros flujos solo se registran en los casos de activos y pasivos financieros que representan derechos u obligaciones frente a no residentes y oro en lingotes (véase el párrafo 3.24 del *MBP6*), dado que la posición de inversión internacional se refiere solo a los activos y pasivos financieros frente al exterior.

3.20 Los otros flujos abarcan diversas clases de variaciones de los activos y pasivos que analíticamente corresponden a dos categorías amplias:

a) Las otras variaciones en el volumen de los activos y pasivos reflejan entradas de activos nuevos en los balances y retiros de

activos y pasivos existentes de dichos balances que no se deben a interacciones por mutuo acuerdo entre unidades institucionales (es decir, transacciones).

b) Revaloraciones (ganancias y pérdidas por tenencias) de activos o pasivos debidas a variaciones de precios o de los tipos de cambio. En las cuentas internacionales, las revaloraciones se subdividen en las que se deben a variaciones de los tipos de cambio y las que se deben a otras variaciones de precios.

Posiciones

3.23 Las posiciones se refieren al nivel de activos o pasivos financieros en un momento determinado. Se registran en la posición de inversión internacional, que es un balance de los activos y pasivos financieros frente al exterior. Por lo general, las posiciones se muestran al comienzo y al final de un período contable. Las posiciones entre dos períodos se conectan con flujos ocurridos en ese lapso, dado que las variaciones de las posiciones son producto de transacciones y otros flujos.

3.24 Los activos financieros son activos económicos que constituyen instrumentos financieros. Los activos financieros comprenden los derechos financieros y, por convención, el oro monetario mantenido en lingotes (incluido el oro mantenido en cuentas de oro asignadas). Un derecho financiero es un instrumento financiero que tiene un pasivo de contrapartida. El oro en lingotes no es un derecho y no tienen un pasivo de contrapartida. Sin embargo, es tratado como activo financiero debido a la función especial que desempeña como medio de intercambio financiero en los pagos internacionales que efectúan las autoridades monetarias y como activo de reserva mantenido por las autoridades monetarias.

3.25 La posición de inversión internacional comprende los activos y los pasivos financieros de carácter internacional. Todos los derechos financieros implican a dos partes, de manera que son de carácter internacional si el derecho es exigible frente a un no residente. Análogamente, todos los pasivos implican a dos partes, de manera que son de carácter internacional si la obligación compromete a un no residente. La posición de inversión internacional se describe en el capítulo 7 del *MBP6*.

Sistema contable

3.26 El sistema contable en el que se basan las cuentas internacionales se sustenta en principios de contabilidad generales. Para comprender el sistema contable de las cuentas internacionales, cabe distinguir tres principios de contabilidad:

a) El método de contabilidad por partida doble en forma vertical, también conocido simplemente como

Anexo V. Marco conceptual de la balanza de pagos y de la posición de inversión internacional

contabilidad por partida doble, utilizado en la contabilidad empresarial.

- b) El método de contabilidad por partida doble en forma horizontal.
- c) El método de contabilidad por partida cuádruple.

Método de contabilidad por partida doble en forma vertical: Asientos correlativos

3.27 La característica principal de la contabilidad por partida doble en forma vertical es que cada transacción da origen a por lo menos dos asientos correlativos, denominados tradicionalmente asientos de crédito y débito, en el libro de la parte que efectúa la transacción. Las cuentas internacionales de una economía deben compilarse de acuerdo con la contabilidad por partida doble en forma vertical desde la perspectiva de los residentes de esa economía. Cada transacción es un intercambio o una transferencia, y por eso requiere dos asientos. Este principio garantiza que el total de todos los asientos de crédito y débito correspondientes a todas las transacciones sean iguales, lo que permite confirmar la coherencia de las cuentas de una unidad determinada. Las reclasificaciones también dan origen a asientos de crédito y débito. Los asientos correspondientes a otros flujos se registran directamente en variaciones del patrimonio neto. Así, la contabilidad por partida doble en forma vertical garantiza la identidad fundamental del balance de una unidad, es decir, el valor total de los activos es igual al valor total de los pasivos más el patrimonio neto. El valor total de los activos de propiedad de una entidad menos el valor total de los pasivos arroja el patrimonio neto. En las cuentas internacionales, la posición de inversión internacional es un indicador de los derechos financieros netos frente a no residentes más el oro en lingotes mantenido como oro monetario. Estos términos se examinan en los párrafos 7.1–7.2 del MBP6.

Método de contabilidad por partida doble en forma horizontal: Asientos de contrapartida

3.28 El concepto de la contabilidad por partida doble en forma horizontal sirve para compilar cuentas que reflejen las relaciones económicas mutuas entre diferentes unidades institucionales de una manera coherente. Esto significa que si la unidad A proporciona algo a la unidad B, las cuentas de A y B muestran la transacción por el mismo monto: como pago en la cuenta de A y como ingreso en la cuenta de B. La contabilidad por partida doble en forma horizontal garantiza la coherencia de los registros correspondientes a la categoría de cada transacción que efectúan las partes. Por ejemplo, a nivel mundial, los dividendos por pagar de todas las economías deben ser iguales a los dividendos por cobrar de todas las economías.

Método de contabilidad por partida cuádruple

3.29 La aplicación simultánea de los asientos de contabilidad por partida doble en forma vertical y horizontal se traduce en un sistema contable por partida cuádruple, que sirve como base para el registro de las cuentas nacionales y las cuentas internacionales. Asimismo, las definiciones, las clasificaciones y los principios contables de las cuentas internacionales se derivan del punto de vista de la simetría conceptual y de la declaración simétrica por parte de las economías que comercian entre sí. El sistema de contabilidad por partida cuádruple trata en forma coherente situaciones con múltiples partes o grupos que participan en las transacciones, cada uno de los cuales practica la contabilidad por partida doble en forma vertical. Por lo tanto, una sola transacción entre dos partes da origen a cuatro asientos. A diferencia de la contabilidad empresarial, las cuentas internacionales abordan las interacciones entre una multitud de unidades en forma paralela, y por consiguiente se debe prestar especial atención a la coherencia. Por ejemplo, como un pasivo de una unidad es el reflejo de un activo financiero de otra unidad, su valoración, asignación en el tiempo y clasificación deben ser idénticas para evitar incongruencias a la hora de agregar los balances de las unidades en totales regionales o mundiales. Lo mismo sucede con todas las transacciones y los otros flujos que afectan los balances de dos partes. En las cuentas internacionales, el método de contabilidad por partida cuádruple es necesario para las comparaciones bilaterales y los datos mundiales integrados.

Tipos de asientos contables

3.30 En las cuentas internacionales los flujos se registran de acuerdo con las siguientes convenciones y terminología. En las cuentas corriente y de capital, un crédito denota asientos de cuentas por cobrar correspondientes a exportaciones, ingreso primario, transferencias y disposiciones de activos no financieros no producidos. Un débito denota asientos de cuentas por pagar correspondientes a importaciones, ingreso primario, transferencias y adquisiciones de activos no financieros no producidos.

3.31 En el caso de las transacciones sobre activos y pasivos financieros, se utilizan los términos “adquisición neta de activos financieros” y “emisión neta de pasivos”. Las partidas de la cuenta financiera se registran en cifras netas y por separado para cada activo financiero y pasivo, es decir, representan las variaciones suscitadas por todos los asientos de crédito y de débito en un ejercicio contable. El uso de los términos “adquisición neta de activos financieros” y “emisión neta de pasivos” destaca la forma en que la cuenta financiera repercute en la posición de inversión internacional. El uso de estos términos asimismo simplifica la interpretación de los datos. Una variación positiva denota un aumento de los activos o los pasivos y una variación

Anexo V. Marco conceptual de la balanza de pagos y de la posición de inversión internacional

negativa denota una disminución de los activos o pasivos. Sin embargo, la interpretación de un aumento o una disminución según la noción de crédito o débito depende de si el aumento o la disminución se refiere a activos o pasivos (un débito en el caso de un activo es un aumento, mientras que un débito en el caso de un pasivo es una disminución). Si bien en las transacciones de la cuenta financiera no se hace hincapié en la presentación de débitos y créditos, es importante reconocer y mantener las identidades contables; por ejemplo, un crédito siempre se equipara conceptualmente con el correspondiente débito, y este último se refiere a un aumento de un activo o a una disminución de un pasivo (véase el recuadro 2.1 del *MBP6*). [...]

Principios sobre momento de registro y valoración

3.39 En el *Manual* se recomienda el uso de la base devengado para determinar el momento de registro de los flujos. En la base devengado el momento de registro coincide con el momento en que ocurren los eventos que dan origen al flujo efectivo de recursos. En el método de base caja el momento de registro podría ser significativamente diferente del momento en que ocurren las transacciones y actividades económicas a las que están vinculados los flujos de efectivo. En el registro en base vencimiento de pago las transacciones suelen registrarse después de que los flujos de recursos hayan tenido lugar, aunque las largas demoras relacionadas con la base caja se reducirían en la mayoría de los casos. Con la base compromiso, el momento de registro sería previo al flujo efectivo de los recursos.

3.40 La base devengado brinda la información más completa porque registra todos los flujos de recursos, incluidas las transacciones no monetarias, las transacciones imputadas y otros flujos. Este registro completo garantiza la integración de los flujos y las variaciones en los balances. La base devengado es coherente con la forma en que se definen las transacciones, los otros flujos y los principales agregados económicos (balanza de bienes y servicios, préstamo neto/endeudamiento neto). También se asemeja a la contabilidad empresarial.

Momento de registro

a. Momento de registro de las transacciones

3.41 El traspaso de la propiedad económica es esencial a la hora de determinar el momento de registro en base devengado de las transacciones de bienes, activos no financieros no producidos y activos financieros. El término “propiedad económica” refleja la realidad subyacente que las cuentas económicas procuran medir. El término tiene en cuenta dónde se encuentran los riesgos y las recompensas de la propiedad. Los conceptos de propiedad económica y los riesgos y las recompensas conexas se

examinan más a fondo en el párrafo 5.3. del *MBP6*. Un cambio de propiedad desde un punto de vista económico significa que en la práctica se transfieren todos los riesgos, las recompensas y los derechos y las responsabilidades de la propiedad. En general, el traspaso de la “propiedad legal” también implica un traspaso de la “propiedad económica”. En ciertos casos, el traspaso de la “propiedad económica” ocurre aunque no haya cambiado la “propiedad legal” (por ejemplo, los arrendamientos financieros y las transacciones entre una empresa y sus sucursales extranjeras). En otros casos no se produce un traspaso de propiedad económica, aunque sí se produce un traspaso de propiedad legal. [...]

3.42 Las transacciones en bienes, activos no financieros no producidos y activos financieros de propiedad de unidades institucionales se registran en el momento en que se traspa la propiedad económica del activo subyacente. Cuando no sea evidente el traspaso de propiedad, se considera que el traspaso de propiedad ocurre en (o lo determina) el momento en que las partes de la transacción lo asientan en sus libros o cuentas.

b. Momento de registro de los flujos

3.60 Los otros flujos abarcan las variaciones en el volumen de los activos y las revaloraciones. Las otras variaciones en el volumen de los activos son normalmente hechos discretos que suceden en momentos precisos o en el transcurso de períodos muy breves de tiempo. Las otras variaciones en el volumen de los activos, incluidas las reclasificaciones, se registran a medida que se producen. Las revaloraciones pueden ocurrir continuamente a medida que varían los precios y los tipos de cambio. En la práctica, las revaloraciones suelen calcularse entre dos momentos determinados en los que se valoran los activos o pasivos en cuestión.

Valoración

3.67 Los precios de mercado se refieren al valor de cambio corriente, es decir, los valores a los que los bienes y otros activos, los servicios y la mano de obra o se intercambian de hecho o podrían intercambiarse por dinero. Los precios de mercado son la base para valorar las cuentas internacionales. En esta sección se describen los principios generales para la valoración de flujos y posiciones. La valoración de tipos específicos de flujos y posiciones se analiza en más detalle en los capítulos pertinentes del *MBP6*.

a. Valoración de las transacciones

3.68 El precio de mercado para las transacciones se define como la suma de dinero que un comprador paga por un bien a un vendedor en una transacción consensual; el intercambio se efectúa entre

Anexo V. Marco conceptual de la balanza de pagos y de la posición de inversión internacional

partes independientes entre sí y tiene motivos puramente comerciales, y a veces se denomina “en pie de igualdad”. En un sentido estricto, el precio de mercado es únicamente el precio adoptado para un intercambio realizado en las condiciones establecidas. Otro intercambio de una unidad igual, aun en casi idénticas circunstancias, podría resultar en un precio de mercado distinto. Definido de esta manera, el precio de mercado debe diferenciarse claramente del precio cotizado en el mercado, del precio de mercado mundial, del precio corriente, del precio justo de mercado o de cualquier otro precio que sirva para expresar la generalidad de los precios de una clase de intercambios supuestamente iguales y no el precio que realmente se aplicó a una determinada transacción. Tampoco debe interpretarse que equivale necesariamente a un precio de mercado libre, es decir, no debe suponerse que una transacción de mercado siempre tiene lugar en una situación de estricta competencia de mercado. De hecho, puede ocurrir en una estructura monopolista, monopsonista o en cualquier otra estructura de mercado. En realidad, el mercado puede definirse en un sentido tan estricto que se limite a una transacción única en su clase efectuada entre partes independientes.

b. Valoración de otros flujos

3.81 Los otros flujos en las cuentas internacionales captan las variaciones en la posición de inversión internacional de activos y pasivos financieros que no se deben a transacciones. Las ganancias y pérdidas por tenencias se derivan de fluctuaciones de los valores de mercado de las posiciones en activos y pasivos financieros. Las ganancias y pérdidas por tenencias pueden acumularse de forma continua. Se produce una ganancia por tenencia cuando aumenta el valor de un activo o disminuye el valor de un pasivo; se produce una pérdida por tenencia cuando disminuye el valor de un activo o aumenta el valor de un pasivo. El valor de las ganancias o pérdidas por tenencias durante un período contable indica las ganancias o pérdidas netas por tenencias correspondientes a activos y pasivos de forma separada. En la práctica, el valor de las ganancias y pérdidas por tenencias se calcula para cada activo y pasivo entre dos momentos determinados: el inicio del período (o el momento en que se adquiere el activo o se contrae el pasivo) y el final del período (o el momento en que se vende el activo o se extingue el pasivo).

3.83 Las otras variaciones del volumen de los activos y pasivos financieros se registran a precios equivalentes al precio de mercado de instrumentos similares. En el caso de las cancelaciones contables de instrumentos financieros valorados según valores nominales, el valor registrado en la cuenta de otras variaciones de los activos y pasivos financieros debe corresponder a su valor nominal previo a la cancelación contable. En el caso de todas las reclasifica-

ciones de activos y pasivos, los valores de los instrumentos nuevos y viejos deben ser iguales.

c. Valoración de posiciones de activos y pasivos financieros

3.84 Las posiciones en activos y pasivos financieros en general deberán valorarse como si hubieran sido adquiridas en transacciones del mercado en la fecha de declaración en el balance. Muchos activos financieros se negocian en los mercados con regularidad y, por consiguiente, pueden valorarse utilizando directamente las cotizaciones del mercado. Si los mercados financieros están cerrados en la fecha del balance, los precios que se deberán utilizar en la valoración son los que estaban vigentes en la fecha inmediatamente precedente en que los mercados estaban abiertos. Los títulos de deuda tienen un valor de mercado corriente y un valor nominal, y para ciertos fines puede ser útil contar con datos complementarios sobre los valores nominales de las posiciones de los títulos de deuda (véase la definición de valor nominal en el párrafo 3.88 del MBP6).

3.85 Es necesario utilizar el equivalente de los precios de mercado para valorar los activos y pasivos financieros que no se negocian en mercados financieros o que se negocian con muy poca frecuencia. En el caso de estos activos y pasivos, será necesario estimar los valores razonables que, en efecto, se aproximan a los precios de mercado. El valor presente de los flujos de caja también puede usarse como una aproximación a los precios de mercado, siempre que se pueda utilizar una tasa de descuento apropiada.

Territorio económico

4.3 En el sentido más amplio, el territorio económico puede ser cualquier zona geográfica o jurisdicción sobre la cual se necesitan estadísticas. La conexión de las entidades con un territorio económico en particular está determinada por aspectos tales como la presencia física y la sujeción a la jurisdicción del gobierno del territorio. De estos aspectos trata la sección del capítulo dedicada a la residencia (véanse los párrafos 4.113–4.144 del MBP6).

4.4 El concepto de territorio económico usado con más frecuencia es la zona que se encuentra bajo el control económico efectivo de un solo gobierno. Para los efectos de las estadísticas globales y su declaración al FMI, es importante tener datos sobre todas las zonas —entre ellas, las especiales— bajo el control de un gobierno determinado, aun si para los fines estadísticos del gobierno esas zonas están excluidas o figuran por separado. Otro tipo de territorio económico es una unión monetaria o económica (véase el apéndice 3 del MBP6). Otros tipos de territorio económico son las partes de una economía, una región o el mundo en su totalidad. Los territorios económicos reflejan todo tipo de alcance para la política o el análisis macroeconómico.

Anexo V. Marco conceptual de la balanza de pagos y de la posición de inversión internacional

4.5 El territorio económico incluye lo siguiente:

- a) La zona terrestre
- b) El espacio aéreo.
- c) Las aguas territoriales, incluidas las zonas en las cuales se ejerce jurisdicción sobre los derechos de pesca o los derechos sobre combustibles o minerales.
- d) En un territorio marítimo, las islas pertenecientes al territorio.
- e) Los enclaves territoriales en el resto del mundo. Se trata de zonas terrestres claramente delimitadas (embajada, consulado, base militar, estación científica, oficina de información o inmigración, organización de ayuda, representación del banco central con carácter diplomático, etc.) que se encuentran físicamente ubicadas en otro territorio y que son utilizadas por un gobierno arrendador o propietario para fines diplomáticos, militares, científicos o de otro tipo con el acuerdo político formal del gobierno del territorio en el cual se hallan ubicadas físicamente. Este tipo de zona puede estar compartida con otras organizaciones, pero para clasificarse como enclave sus operaciones deben estar exentas en gran medida de las leyes locales. Sin embargo, las operaciones de un gobierno que están íntegramente sujetas a las leyes de la economía anfitriona no se consideran enclaves, sino como residentes de esa economía.

4.6 El territorio económico posee las dimensiones de jurisdicción legal y de ubicación física, de modo que las sociedades creadas en virtud de su legislación forman parte de la economía. Los conceptos de territorio económico y de residencia sirven para asegurar que cada unidad institucional es residente de un solo territorio económico. El uso de un territorio económico para marcar la extensión de las estadísticas económicas significa que cada miembro de un grupo de empresas afiliadas forma parte de la economía de la cual es residente, en lugar de ser imputado a la economía de la casa central. El énfasis en los datos correspondientes a un territorio económico significa que, para los efectos estadísticos, a veces es necesario dividir una entidad jurídica en unidades separadas ubicadas en diferentes territorios, como se detalla en los párrafos 4.26–4.49 del *MBP6*.

Definición de una economía

4.11 *Una economía está integrada por todas las unidades institucionales residentes de un territorio económico determinado. [...]*

Unidades

4.13 *Los principales atributos de una unidad institucional son los siguientes:*

- a) Puede ser propietaria de bienes o activos por derecho propio y, por lo tanto, puede intercambiar la propiedad de bienes o activos mediante transacciones con otras unidades institucionales.
- b) Tiene capacidad para tomar decisiones económicas y realizar actividades económicas de las que es directamente responsable ante la ley.
- c) Tiene capacidad para contraer pasivos en nombre propio, aceptar otras obligaciones o compromisos futuros y suscribir contratos.
- d) O bien tiene un conjunto completo de cuentas que incluye un balance, o bien es económica y jurídicamente posible y relevante elaborar un conjunto completo de cuentas cuando sea necesario.

Sin embargo, se reconocen como unidades institucionales las sucursales y las unidades residentes hipotéticas (como se explica en los párrafos 4.26–4.44 del *MBP6*) aunque no cumplan totalmente los criterios a), b) y c).

4.14 En el mundo real hay dos grandes tipos de unidades que pueden considerarse unidades institucionales, a saber:

- a) Hogares, o sea, personas o grupos de personas.
- b) Sociedades (o cuasisociedades), instituciones sin fines de lucro y unidades del gobierno, o sea, entidades jurídicas o sociales cuya existencia es reconocida por la ley o la sociedad, independientemente de qué personas o entidades sean sus propietarias o las mantengan bajo su control.

Anexo VI. Clasificación y componentes normalizados de la balanza de pagos y la posición de inversión internacional (PII)

Componentes normalizados y partidas informativas

1.15 En el apéndice 9 del *MBP6* se presenta una lista de las partidas normalizadas para la presentación y declaración de la balanza de pagos y posición de inversión internacional. Las partidas normalizadas están conformadas por los componentes normalizados y las partidas informativas

a) *Los componentes normalizados son partidas que en su totalidad forman parte del marco y contribuyen a los totales y a las partidas equilibradoras.*

b) *Las partidas informativas forman parte de la presentación normal, pero no se utilizan para derivar totales ni partidas equilibradoras. [...]*

Además,

c) *Las partidas suplementarias están fuera de la presentación normal, pero se compilan dependiendo de las circunstancias de cada economía, teniendo en cuenta los intereses de las autoridades de política y los analistas, así como los costos de los recursos (véanse las partidas en bastardillas en el apéndice 9 del *MBP6*).*

Clasificación general y detallada

2.13 Las diversas cuentas que conforman la balanza de pagos se distinguen según la naturaleza de los recursos económicos suministrados y recibidos.

Cuenta corriente

2.14 *La cuenta corriente muestra los flujos de bienes, servicios, ingreso primario e ingreso secundario entre residentes y no residentes. La cuenta corriente es una agrupación importante de cuentas dentro de la balanza de pagos. [...]*

2.15 El saldo de estas cuentas se conoce como el saldo de la cuenta corriente. El saldo en cuenta corriente muestra la diferencia entre la suma de las exportaciones e ingresos por cobrar y la suma de las importaciones e ingresos por pagar (las exportaciones e importaciones se refieren tanto a bienes como servicios, y el ingreso se refiere al ingreso primario y al secundario). Como se indica en el capítulo 14 del *MBP6*, Cuestiones seleccionadas en el análisis de la balanza de pagos y la posición de inversión internacional, el valor del saldo en cuenta corriente equivale a la brecha de ahorro-inversión de la economía, de modo que el saldo en cuenta corriente guarda relación con una comprensión de las transacciones internas.

Cuenta de bienes y servicios

10.1 *La cuenta de bienes y servicios muestra transacciones en artículos que son resultado de actividades productivas.*

Bienes

1. Mercancías generales

10.13 *Mercancías generales según la balanza de pagos comprende los bienes cuya propiedad económica se traspaşa entre un residente y un no residente y que no se incluyen en las siguientes categorías específicas: Bienes en compraventa (véanse los párrafos 10.41–10.49 del *MBP6*), oro no monetario (párrafos 10.50–10.54 del *MBP6*), partes de los viajes (párrafo 10.94 del *MBP6*), construcción (párrafo 10.101 del *MBP6*), y bienes y servicios del gobierno n.i.o.p. (párrafo 10.173 del *MBP6*).*

2. Otros bienes

a. Bienes en compraventa

10.41 *La compraventa se define como la compra de un bien por un residente (de la economía compiladora) a un no residente y la reventa posterior del mismo bien a otro no residente sin que dicho bien esté presente en la economía compiladora. La compraventa se produce en aquellas transacciones de bienes en las que la posesión física de los mismos por parte del propietario no es necesaria para que el proceso tenga lugar. [...]*

b. Oro no monetario

10.50 El oro no monetario comprende todo oro que no sea oro monetario. El oro monetario, como se define en los párrafos 5.74–5.75 del *MBP6*, pertenece a las autoridades monetarias y se mantiene como activo de reserva. El oro no monetario puede adoptar la forma de lingotes (es decir, el oro en lingotes puede tener la forma de monedas, lingotes o barras con una pureza de por lo menos 995 partes por 1.000, incluido el oro mantenido en cuentas de oro con asignación), polvo de oro y oro en otras formas brutas o semielaboradas. Las joyas, relojes, etc. que contienen oro se incluyen en las mercancías generales y no en el oro no monetario. [...]

Servicios

a. Servicios de manufactura sobre insumos físicos pertenecientes a otros

10.62 *Los servicios de manufactura sobre insumos físicos pertenecientes a otros comprenden la transformación, ensamblaje, empaquetado, etc. realizados por empresas que no son dueñas de los bienes en cuestión. La manufactura es realizada por una entidad que no es dueña de los bienes y que recibe un pago por parte de su dueño. En estos casos, la propiedad de los bienes no cambia, de modo que no se registra ninguna transacción correspondiente a mercancías generales entre el transformador y el propietario de los bienes.*

Anexo VI. Clasificación y componentes normalizados de la balanza de pagos y la posición de inversión internacional (PII)

b. Servicios de mantenimiento y reparaciones n.i.o.p.

10.72 Los servicios de mantenimiento y reparaciones n.i.o.p. comprenden los trabajos de reparación y mantenimiento realizados por residentes sobre bienes de propiedad de no residentes (y viceversa). Las reparaciones pueden ser efectuadas en la sede del reparador o en cualquier otra parte. [...]

c. Transporte

10.74 *Transporte es el proceso de llevar personas u objetos de una localidad a otra así como los servicios de apoyo y auxiliares. También se incluyen los servicios postales y de mensajería. El transporte puede ser clasificado según:*

a) Modalidad de transporte, a saber, por vía marítima, aérea o de otro tipo. ("Otro" puede desglosarse aún más entre ferroviario, por carretera, por vías de navegación interiores, por tuberías y el transporte espacial, así como la transmisión de energía eléctrica).

b) Qué se transporta: pasajeros o carga.

d. Viajes

10.86 *Los asientos de crédito por viajes comprenden los bienes y servicios para uso propio o donación adquiridos en una economía por no residentes durante su visita a esa economía. Los asientos de débito por viajes comprenden los bienes y servicios para uso propio o donación adquiridos en otras economías por los residentes durante su visita a esas economías.* Los bienes y servicios pueden ser adquiridos por las personas interesadas o por un tercero en su nombre. Por ejemplo, los viajes de negocios pueden ser pagados o reembolsados por un empleador, los gastos de matrícula y sostenimiento de un estudiante pueden ser pagados por un gobierno o los gastos de salud pueden ser pagados o reembolsados por un gobierno o compañía de seguros. También se incluyen los bienes y servicios prestados por el productor sin un cobro explícito, por ejemplo, matrícula y pensión suministrados por una universidad.

10.87 La desagregación por componentes normalizados de los viajes se hace entre viajes de negocios y viajes personales, con datos suplementarios para los grupos de interés especial, como los trabajadores fronterizos, de temporada y otros empleados temporales. Se sugiere otro desglose suplementario de los viajes por tipos de bienes y servicios (véase el párrafo 10.95 del MBP6).

e. Construcción

10.101 La construcción comprende la creación, renovación, reparación o ampliación de activos fijos en forma

de edificios, mejoras de tierras en términos de ingeniería y otras construcciones de ingeniería de ese tipo tales como carreteras, puentes, presas, etc. También incluye los trabajos conexos de instalación y ensamblaje. Incluye la preparación del terreno y la construcción en general, así como los servicios especializados, como la pintura, la plomería y la demolición. También incluye la gestión de los proyectos de construcción.

10.103 Si las operaciones externas de una empresa de construcción son considerables, se puede constituir una sucursal residente en la economía de operación (véanse los párrafos 4.27–4.29 del MBP6). Por consiguiente, un gran proyecto de construcción contratado por una empresa no residente cuya conclusión demora más de un año generalmente dará origen a una sucursal residente. Por ende, habría una relación de inversión directa entre la casa matriz y la sucursal; también se podrían suministrar bienes y servicios entre la sucursal y la casa matriz, por ejemplo materiales. Como consecuencia de este tratamiento, los contratos de construcción que se emplean en el comercio internacional de servicios generalmente tienen un carácter de corto plazo.

f. Servicios de seguros y pensiones

10.109 Los servicios de seguros y pensiones incluyen servicios de suministro de seguros de vida y rentas vitalicias, seguros no de vida, reaseguros, seguros de fletes, pensiones, garantías normalizadas y servicios auxiliares de los seguros, planes de jubilación y mecanismos normalizados de garantía. En el apéndice 6c del MBP6 se ofrece más información sobre los seguros y pensiones.

g. Servicios financieros

10.118 Los servicios financieros comprenden los servicios prestados por los intermediarios y auxiliares financieros, excepto los servicios prestados por las compañías de seguros y los fondos de pensiones. Estos servicios incluyen los que suelen ser prestados por los bancos y otras sociedades financieras. Incluyen la captación de depósitos y la concesión de préstamos, las cartas de crédito, los servicios de tarjetas de crédito, las comisiones y cargos relacionados con el arrendamiento financiero, *factoring*, colocación y garantía de emisiones, y compensación de pagos. También incluyen los servicios de asesoramiento financiero, custodia de activos financieros o metales, gestión de los activos financieros, servicios de supervisión, servicios de suministro de liquidez, servicios de asunción de riesgos diferentes de los seguros, servicios de fusiones y adquisiciones, servicios de calificación del crédito, servicios de corretaje de valores y servicios fiduciarios.

10.119 Los servicios financieros pueden cobrarse de las siguientes maneras::

Anexo VI. Clasificación y componentes normalizados de la balanza de pagos y la posición de inversión internacional (PII)

- a) Cargos explícitos.
- b) Diferenciales entre las transacciones de compra y venta.
- c) Gastos de gestión de activos deducidos del ingreso de la propiedad por cobrar en el caso de las entidades tenedoras de activos.
- d) Diferenciales entre los intereses pagaderos y las tasas de referencia sobre los préstamos y depósitos (denominados cargos por servicios de intermediación financiera medidos indirectamente, que se abrevian mediante la expresión SIFMI). [...]

h. Cargos por el uso de la propiedad intelectual n.i.o.p.

10.137 Los cargos por el uso de la propiedad intelectual n.i.o.p. incluyen los siguientes cargos:

- a) Cargos por el uso de derechos de propiedad (como las patentes, marcas registradas, derechos de autor, procesos y diseños industriales —incluidos los secretos comerciales— y concesiones). Estos derechos pueden surgir a partir de la investigación y desarrollo, así como del *marketing*.
- b) Cargos por licencias para reproducir y/o distribuir propiedad intelectual incorporada en originales o prototipos producidos (como los derechos de autor por libros y manuscritos, programas de informática, trabajos cinematográficos y grabaciones de sonido) y derechos conexos (por ejemplo, los correspondientes a presentaciones en vivo y transmisiones por televisión, cable o vía satélite). [...]

i. Servicios de telecomunicaciones, informática y de información

10.141 Los servicios de informática y telecomunicaciones se definen en función de la naturaleza del servicio, no del método de suministro. Para ilustrar esto, el suministro de servicios empresariales, como los servicios contables, se incluye en el renglón correspondiente de otros servicios empresariales, aunque estos servicios sean prestados en su totalidad por teléfono, computadoras o Internet. En los servicios de telecomunicaciones deben incluirse únicamente los montos pagaderos por transmisión; los contenidos descargados deben incluirse en la respectiva partida (servicios de informática, información, audiovisuales, etc.).

j. Otros servicios empresariales

Incluyen: Servicios de investigación y desarrollo; Servicios de consultoría profesional y en administración; Servicios técnicos, relacionados con el comercio y otros servicios

empresariales; Tratamiento de residuos y descontaminación, servicios agrícolas y mineros; Arrendamiento operativo; Servicios relacionados con el comercio; y Otros servicios empresariales

k. Servicios personales, culturales y recreativos

10.161 Servicios personales, culturales y recreativos abarca a) servicios audiovisuales y conexos y b) otros servicios personales, culturales y recreativos.

l. Bienes y servicios del gobierno n.i.o.p.

10.173 Los bienes y servicios del gobierno n.i.o.p. comprenden:

- a) Los bienes y servicios suministrados por enclaves, tales como las embajadas, bases militares y organismos internacionales, y los suministrados a ellos.
- b) Los bienes y servicios adquiridos de la economía anfitriona por el personal diplomático, consular y militar destacado en el extranjero y sus dependientes.
- c) Los servicios suministrados por los gobiernos y a ellos, no incluidos en otras categorías de servicios. [...]

Cuenta del ingreso primario

11.8 Las cuentas internacionales hacen una distinción entre los siguientes tipos de ingreso primario:

- a) Remuneración de empleados.
- b) Dividendos.
- c) Utilidades reinvertidas.
- d) Intereses.
- e) Ingreso de la inversión atribuible a titulares de pólizas de seguros, garantías normalizadas y fondos de pensiones.
- f) Renta.
- g) Impuestos y subsidios a los productos y la producción. [...]

Ingreso de la inversión y categorías funcionales

1. Ingreso de la inversión directa

11.96 El ingreso de la inversión directa incluye la totalidad del ingreso de la inversión derivado de posiciones de inversión directa entre unidades institucionales residentes y no residentes. [...]

Anexo VI. Clasificación y componentes normalizados de la balanza de pagos y la posición de inversión internacional (PII)

11.97 Las relaciones de inversión directa se definen en los párrafos 6.8–6.24 del *MBP6*. Se pueden distinguir tres tipos de relación de inversión directa, con los correspondientes flujos de ingreso de la inversión:

a) Inversión de inversionistas directos en empresas de inversión directa. Esta categoría incluye flujos de ingreso de la inversión (utilidades distribuidas, utilidades reinvertidas e intereses) entre el inversionista directo y sus empresas de inversión directa (haya o no una relación inmediata).

b) Inversión en sentido contrario (definida en el párrafo 6.40 del *MBP6*). Este tipo de relación abarca los flujos de ingreso de la inversión generados por pasivos de los inversionistas directos hacia sus empresas de inversión directa y por derechos de las empresas de inversión directa frente a sus inversionistas directos.

c) Entre empresas emparentadas. Aquí se incluyen los flujos de ingreso de la inversión entre todas las empresas emparentadas pertenecientes al mismo grupo de inversión directa.

En cualquiera de estos tipos de relación de inversión directa puede haber dividendos, retiros de ingresos de cuasiesociedades e intereses. Las utilidades reinvertidas se atribuyen a los inversionistas directos únicamente cuando su participación de capital alcanza el nivel de 10%. [...]

2. Ingreso procedente de la inversión en sentido contrario

11.103 El ingreso de la inversión de cartera incluye los flujos de ingresos entre residentes y no residentes que surgen de posiciones en participaciones de capital y títulos de deuda distintos de los clasificados como inversión directa o activos de reserva. [...]

3. Otro ingreso de la inversión

11.106 El otro ingreso de la inversión comprende los flujos, entre unidades institucionales residentes y no residentes, de intereses por depósitos, préstamos, créditos y anticipos comerciales y otras cuentas por cobrar y por pagar; ingreso procedente de participaciones de capital y participaciones en fondos de inversión que no están clasificadas en ninguna otra categoría funcional, e ingreso de la inversión atribuible a titulares de pólizas de seguros, garantías normalizadas y fondos de pensiones. Los intereses pagaderos por asignaciones de DEG también se asientan como otro ingreso de la inversión. Los cargos por préstamos de oro no monetario deben incluirse junto con los intereses en otro ingreso de la inversión [...]

4. Ingreso procedente de activos de reserva

11.109 [...] El ingreso de la inversión procedente de activos de reserva incluye el ingreso procedente de participaciones de capital y participaciones en fondos de inversión, así como los intereses. [...] Si no se dispone de datos para la publicación, el ingreso procedente de activos de reserva debe incluirse en otra inversión (intereses).

Cuenta del ingreso secundario

12.1 La cuenta del ingreso secundario muestra las transferencias corrientes entre residentes y no residentes. En esta cuenta se asientan distintos tipos de transferencia corriente para mostrar la función que desempeñan en el proceso de distribución del ingreso entre las economías. Las transferencias pueden ser en efectivo o en especie. [...]

12.7 Una transferencia es un asiento correspondiente al suministro de un bien, servicio, activo financiero u otro activo no producido por parte de una unidad institucional a otra unidad institucional sin obtener a cambio un artículo de valor económico. [...]

12.20 Las cuentas internacionales clasifican los siguientes tipos de transferencias corrientes:

Transferencias personales

Otras transferencias corrientes

- a) Impuestos corrientes sobre el ingreso, el patrimonio, etc.
- b) Contribuciones sociales.
- c) Prestaciones sociales.
- d) Primas netas de seguros no de vida.
- e) Reclamaciones de indemnización de seguros no de vida.
- f) Cooperación internacional corriente.
- g) Transferencias personales. [...]

12.21 Las transferencias personales consisten en todas las transferencias corrientes, en efectivo o en especie, de hogares residentes a favor de hogares no residentes, o viceversa. Por lo tanto, las transferencias personales incluyen todas las transferencias corrientes entre personas residentes y no residentes, independientemente de los siguientes factores:

- a) La fuente del ingreso del transferente [...]
- b) La relación entre los hogares [...]

Anexo VI. Clasificación y componentes normalizados de la balanza de pagos y la posición de inversión internacional (PII)

Cuenta de capital

2.16 La cuenta de capital muestra los asientos de crédito y débito de los activos no financieros no producidos y las transferencias de capital entre residentes y no residentes. Es decir, registra las adquisiciones y disposiciones de activos no financieros no producidos, como las ventas de tierras a embajadas y ventas de contratos de arrendamiento y licencias, así como transferencias de capital, es decir, el suministro de recursos para fines de capital por una parte sin recibir directamente nada de valor económico a cambio. Esta cuenta se describe más detalladamente en el capítulo 13 del *MBP6*.

13.8 Los activos no financieros no producidos abarcan lo siguiente:

- a) Recursos naturales
- b) Contratos, arrendamientos y licencias
- c) Activos de comercio (y fondos de comercio).

13.19 *Las transferencias de capital son transferencias en las que se traspaşa la propiedad de un activo (distinto del efectivo y de las existencias) de una parte a otra; o que obligan a una o a ambas partes a adquirir o disponer de un activo (distinto del efectivo y de las existencias), o en las que el acreedor condona una obligación. [...]*

Registro en cifras brutas y netas

2.19 Las cuentas corriente y de capital muestran las transacciones en valores brutos. En cambio, la cuenta financiera muestra las transacciones en cifras netas, separando los pasivos y los activos financieros (es decir, las transacciones netas en activos financieros muestran la adquisición de activos menos la reducción de activos, no los activos menos los pasivos). [...]

Errores y omisiones netos

2.24 Si bien en principio las cuentas de la balanza de pagos están equilibradas, en la práctica surgen desequilibrios por imperfecciones en los datos fuente y la compilación. Este desequilibrio, que es una característica común en los datos de la balanza de pagos, recibe el nombre de errores y omisiones netos y debe señalarse por separado en los datos publicados. No debe ser incluido en otras partidas sin distinción alguna. Errores y omisiones netos se deriva por residuo como el préstamo neto/endeudamiento neto derivado de la cuenta financiera menos la misma partida derivada de las cuentas corriente y de capital. Por consiguiente, un valor positivo en la cuenta de errores y omisiones netos indica una tendencia general a una o varias de las posibilidades siguientes:

- a) El valor de los créditos en las cuentas corriente y de capital es demasiado bajo.

- b) El valor de los débitos en las cuentas corriente y de capital es demasiado alto.

- c) El valor del aumento neto de los activos en la cuenta financiera es demasiado alto.

- d) El valor del aumento neto de los pasivos en la cuenta financiera es demasiado bajo.

(Si los errores y omisiones netos tienen un valor negativo, las tendencias serán las contrarias).

Cuenta financiera y posición de inversión internacional

2.17 La cuenta financiera muestra la adquisición y disposición netas de activos y pasivos financieros. Esta cuenta se describe en el capítulo 8 del *MBP6*. Las transacciones de la cuenta financiera aparecen en la balanza de pagos y, por su efecto sobre la posición de activos y pasivos, también en el estado integrado de la PII.

2.18 La suma de los saldos de las cuentas corriente y de capital representa el préstamo neto (superávit) o endeudamiento neto (déficit) de la economía frente al resto del mundo. Conceptualmente, esto equivale al saldo neto de la cuenta financiera. Dicho de otro modo, la cuenta financiera mide la forma como se financia el préstamo neto o el endeudamiento neto frente a no residentes. La cuenta financiera sumada a la cuenta de otras variaciones explica el cambio sufrido por la PII entre el comienzo y el final del período.

2.11 El nivel de clasificación más alto utilizado en la PII, la cuenta financiera y la cuenta de otras variaciones de los activos y pasivos financieros, es la clasificación funcional, que se discute en el capítulo 6 del *MBP6*. [...]

1. Inversión directa

6.8 *La inversión directa es una categoría de la inversión transfronteriza relacionada con el hecho de que un inversionista residente en una economía ejerce el control o un grado significativo de influencia sobre la gestión de una empresa que es residente en otra economía.* Además de la participación de capital que entraña control o influencia, la inversión directa también incluye inversiones conexas con esa relación, incluida la inversión en empresas bajo el control o influencia indirectos (párrafo 6.12 del *MBP6*), la inversión en empresas emparentadas (véase el párrafo 6.17 del *MBP6*), deuda (excepto cierta deuda que se define en el párrafo 6.28) y la inversión en sentido contrario (véase el párrafo 6.40 del *MBP6*). El Marco para las Relaciones de Inversión Directa (MRID) ofrece criterios para determinar si una propiedad transfronteriza se traduce en una relación de inversión directa, según el grado de control y/o influencia ejercidos. La definición de inver-

Anexo VI. Clasificación y componentes normalizados de la balanza de pagos y la posición de inversión internacional (PII)

sión directa es la misma que se utiliza en la cuarta edición de *OECD Benchmark Definition of Foreign Direct Investment*, que ofrece detalles adicionales sobre el MRID y la recopilación de datos sobre la inversión directa. [...]

2. Inversión de cartera

6.54 La inversión de cartera se define como las transacciones y posiciones transfronterizas que implican títulos de deuda o de participación en el capital, distintos de los incluidos en la inversión directa o los activos de reserva. [...] La negociabilidad de los títulos es una forma de facilitar su intercambio, lo que les permite tener diferentes dueños en el curso de su vida útil. La negociabilidad permite a los inversionistas diversificar sus carteras y retirar sus inversiones de inmediato. La inversión de cartera incluye las acciones o unidades en fondos de inversión (es decir, las emitidas por fondos de inversión) que se evidencian mediante títulos que no son activos de reserva ni inversión directa. Si bien los derivados financieros negociados en bolsa son instrumentos negociables, no se incluyen en la inversión de cartera porque están incluidos en una categoría especial.

6.57 La inversión de cartera puede presentarse por instrumentos, por plazo de vencimiento original o residual, o por sector institucional. [...]

3. Derivados financieros (distintos de reservas) y opciones de compra de acciones por parte de empleados

6.58 La definición de la categoría funcional correspondiente a los derivados financieros (distintos de reservas) y opciones de compra de acciones por parte de empleados coincide en gran medida con la respectiva clase de instrumentos financieros, que se examina más detalladamente en los párrafos 5.79–5.98 del *MBP6*. La diferencia de cobertura entre la categoría funcional y por instrumento financiero es que los derivados financieros relacionados con la gestión de activos de reserva no se incluyen en la categoría funcional sino en la de activos de reserva (véase el párrafo 6.91 del *MBP6*). Esta categoría se indica en forma separada de las demás categorías porque se refiere a la transferencia de riesgos y no al suministro de fondos u otros recursos.

6.59 Al contrario de otras categorías funcionales, de los derivados financieros no se devenga ningún ingreso primario. Todo monto devengado en virtud del contrato se clasifica como revaloraciones y se incluye en la cuenta de otras variaciones de los activos y pasivos. [...]

4. Otra inversión

6.61 Otra inversión es una categoría residual que incluye las posiciones y transacciones que no se incluyen en la inversión directa, la inversión de cartera, los derivados financieros y las opciones de compra de acciones por parte de empleados, y los activos de reserva. En la medida en que las siguientes clases de acti-

vos y pasivos financieros no se incluyen ni en la inversión directa ni en los activos de reserva, otra inversión incluye los siguientes componentes:

- a) Otras participaciones de capital.
- b) Moneda y depósitos.
- c) Préstamos (incluido el uso de crédito del FMI y préstamos del FMI).
- d) Reservas técnicas de seguros no de vida, seguros de vida y derechos a rentas vitalicias, derechos en fondos de pensiones y provisiones para las peticiones de fondos en virtud de garantías normalizadas.
- e) Créditos y anticipos comerciales.
- f) Otras cuentas por cobrar/por pagar.
- g) Asignaciones de DEG [...].

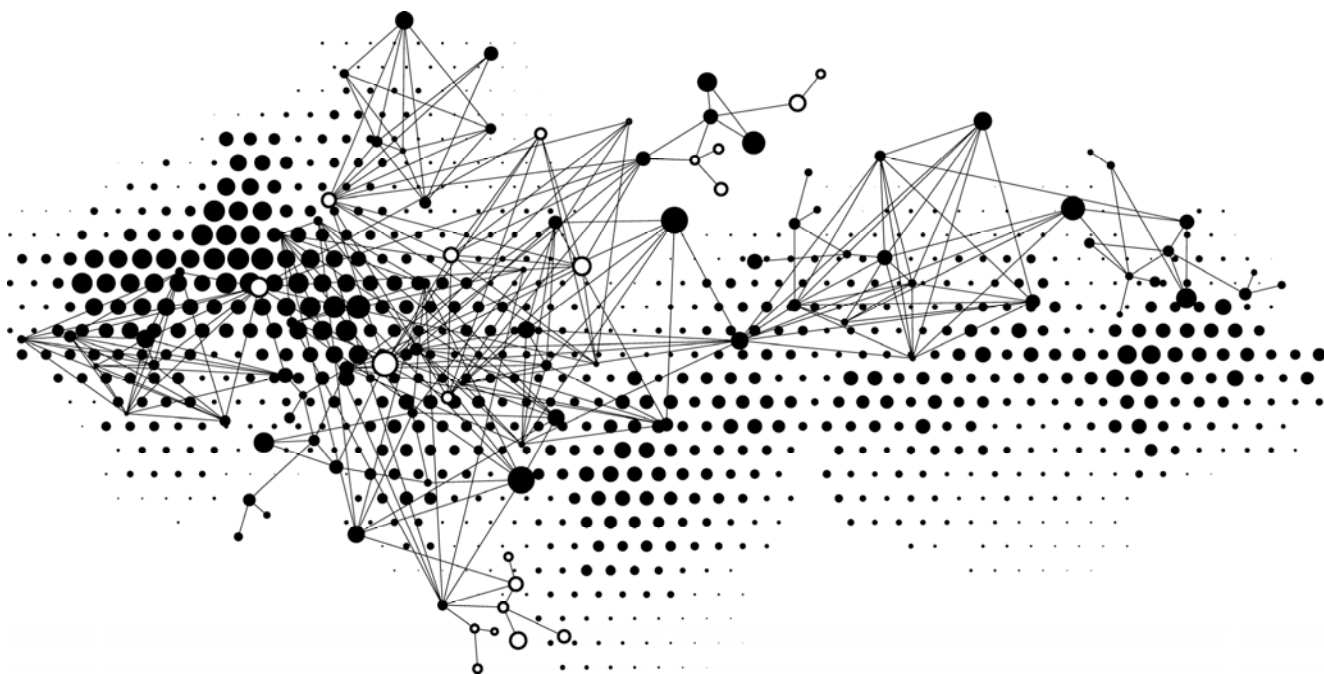

Derechos especiales de giro

5.34 Los derechos especiales de giro (DEG) son activos internacionales de reserva creados por el FMI, que los asigna a sus miembros para complementar sus activos de reserva. Los DEG son mantenidos exclusivamente por las autoridades monetarias de los países miembros del FMI y por un limitado número de instituciones financieras internacionales autorizadas. Las tenencias de DEG representan derechos incondicionales de obtener divisas u otros activos de reserva de países miembros del FMI. [...]

5.35 Las tenencias de DEG por un país miembro del FMI son registradas como activo, mientras que las asignaciones de DEG se registran como la emisión de un pasivo del país miembro que las recibe (al existir una obligación de reembolso de la asignación en ciertas circunstancias, y devengarse intereses). Las tenencias y asignaciones deben expresarse en cifras brutas, no netas.

5. Reservas

6.64 Los activos de reserva se definen como activos externos que están disponibles de inmediato y bajo el control de las autoridades monetarias para satisfacer necesidades de financiamiento de la balanza de pagos, para intervenir en los mercados cambiarios a fin de influir sobre el tipo de cambio y para otros fines conexos (como el mantenimiento de la confianza en la moneda y la economía y servir como base para el endeudamiento externo). Los activos de reserva deben ser activos en moneda extranjera y estar realmente constituidos. Se excluyen los activos potenciales. El concepto de activos de reserva se basa en las condiciones de “control efectivo” y “disponibilidad” de los activos por parte de las autoridades monetarias. La composición de los activos de reserva y los pasivos relacionados con las reservas se ilustra en el recuadro 6.5 del *MBP6*.
