Office and enterprise systems

Enterprise Resource Planning (ERP)
Enterprise Resource Planning (ERP) software combines the management of all the departments in an enterprise into a single system to make it more efficient and gather better data about how it works.
ERP software objective is to supervise and coordinate all of the company's operations such as finance, accounting, sales, human resources and manufacturing among others.
It is usually modular
ERP allows businesses to make better business decisions, reduce operational costs, and improve efficiency by delivering the right product at the right time and managing purchases and inventory.
You can find ERPs for all different sizes of business with a wide range of prices. You can even use an ERP on the cloud.
There are also Open Source ERPs that you can download and install for free. Usually you hire the services of a consulting company that carries out analysis, deployment and maintenance of the system and provides support.
