

# LESSON 6 SUMMARY

1 The first antibody response is IgM

---

2 IgG can mature into super binders

---

3 IgA provides special protection of our mucosa

---

4 IgE decorates Mast cells to trigger explosive reactions to dislodge worms

---

5 In the absence of parasitic worms there is a rise in allergies

6 T-cells seek infected cells that need to be eliminated

---

7 T-cells identify infected cells by MHC reporters

---

8 Immunodeficiency can be the result of: malnutrition, congenital disease and viral infection

---

9 Blood tests are important in detecting and managing the AIDS epidemic

---

10 Detecting virus defining antibodies is the basis of some blood tests
