

LESSON 7 SUMMARY

1 Smallpox vaccine was the first

2 There are 2 types of Polio vaccines: IPV and OPV

3 Attenuation is achieved by culturing viruses in sub-optimal conditions

4 Subunit vaccines use only fragments of the pathogen

5 Viral subunit vaccines contain virus spike protein

6 Viruses resistant to vaccination

7 Vaccines contain adjuvants

8 Thimerosal has been omitted since the year 2000

9 Current vaccination schedule that protects against 13 pathogens
